## PREFACE.

THE researches embodied in the present volume were prosecuted during my tenure of one of the Berkeley fellowships of the Owens College; and I have, at the outset, to express my acknowledgments to the Council, not merely for thus enabling me to follow out a long-formed scheme of investigation, but for the extreme indulgence which I have enjoyed during its protracted execution.

An unusually explicit statement of literary obligations is one of the few ways in which those who venture to write books on unfamiliar subjects can acknowledge their indebtedness to those who read them. I should otherwise shrink from the egoism of saying that the present volume owes its original stimulus to a few lectures upon the German literature of the sixteenth century, by three masters in it, Professors Erich Schmidt, Geiger and Scherer, to which I had the privilege

MAR 27 1961

of listening (in the last case as a casual visitor) at Vienna and Berlin, in the summers of 1881 and 1882. I do not think that much of the book in its present shape is directly due to them, even where it deals most immediately with German literature; but I owe to their luminous and vivid exposition the sense for the peculiar power of this remarkable literature, without which I should hardly have attempted to trace its reflexions in our own. Among other aids to the study of the German branch of the subject I need scarcely refer to the classical editions of particular books by Zarncke, Adelbert v. Keller, Lappenberg, Hoffmann v. Fallersleben, Oesterley, Schade, the brilliant incidental work done by Scherer and Erich Schmidt on the Latin drama and the novel in scattered articles and lectures, still less to the invaluable *Grundriss* of Goedeke, nowhere so invaluable as for exactly this period. In working out the English side, I owe most to a somewhat old-fashioned school of antiquarians,—Thoms, Wright and Kemble, to various publications of the Percy, Shakspeare, and New Shakspeare Societies, to the editorial work of Dyce, Ward, Wagner, Oesterley, and, finally, to the two admirable essays of Prof. K. Elze,—one of them contained in the introduction to his edition of the *Alphonsus*,—which, excepting perhaps the melancholy abortions of the late William Bell, are the only previous attempts with which I am acquainted to carry out a design somewhat resembling that of the present volume. It remains to refer to more personal obligations. I have to thank

the librarians of the Bodleian, of Queen's College, Oxford, and of the Royal Library at Berlin, for exceptional kindness in sending particulars of books in their possession; Mr F. Seebohm for making inquiries about Ralph Radcliff at Hitchin; and Prof. Ward, Dr H. Hager, Dr Furnivall, Dr J. Bolte of Berlin, and Mr A. H. Bullen for incidental help always willingly given. For more ordinary good offices I am indebted to the librarians of Lambeth, the Cambridge Public Library, the Free, Chetham and Owens College libraries in Manchester, and above all to the late and present superintendents of the Reading-room of the British Museum. Superfluous as it may seem, I cannot refrain from expressing the immensity of my debt to the last-named library, some idea of which will be conveyed by my notes. Not only has almost the entire work of research been done there, but a great part of it could have been done nowhere else. There alone, whether in Germany or in England, was it possible to draw upon a collection in which the original literatures of both countries were richly represented, where above all there was an unrivalled store of the German satires and pasquils of the Reformation. I have accordingly been enabled to attempt throughout a fairly high degree of minuteness in the matter of references. The infinite opportunities of error which this method brings with it I cannot indeed possibly hope to have escaped; and I am painfully conscious of needing in this respect as in others an indulgence which I have neither the right to ask, nor the critic, perhaps, to give. It may at least,

however, be taken, where the contrary is not implied, that every book here referred to I have seen, and that every judgment passed is founded upon first-hand knowledge.

I have reserved to the close a special obligation. I have to thank Professor Ward both for the loan of books (for which I am also indebted to my friends Dr H. Hager, and Mr J. Finlayson) and for the great kindness with which, in the midst of multifarious work, he undertook to revise my proof-sheets. Almost all of them owe something to having passed under the eye of undoubtedly the most competent of living English scholars in the double field which I have attempted to traverse. It is now a considerable number of years since I derived from Prof. Ward the first impulse to literary study; I rejoice at the circumstances which have permitted me thus to resume under a new guise somewhat of the old forms, and to renew some of the old privileges, of studentship.

A book like the present is necessarily addressed mainly to two classes of literary specialists, not precisely identical in character. I have in general avoided dealing at length with matters thoroughly familiar to English as well as to German scholarship. In certain parts of the subject however it was necessary to be either obscure to the one or redundant to the other; and here my German critics will hardly blame me for having, in an English book, considered chiefly the English reader. The introductions, particularly, to the various chapters, and other portions dealing with German litera-

ture, though founded throughout on original study, pretend to no originality of result; but I am not without hope that they may be acceptable to the English student of a too much neglected epoch.

Portions of Chapter I. have already appeared in the *Academy*, of Chapter III. in the *Englische Studien*, and of Chapter VI. in the *Cornhill Magazine*. I have to thank Messrs Smith and Elder in the last case for permission to reprint.

LONDON, *April*, 1886.

# CONTENTS.

## INTRODUCTION (xix—xxix).

Aim of the work; xix.—Nature of the literary influence of Germany in the sixteenth century; xx.—Humanist and Protestant contributions; xxii.—Literary influence of German Protestantism in England; xxiv;—of Secular Satire; xxv.—Summary; xxviii.

## PART I.

### CHAPTER I.

#### LYRICS (1—20).

German and English lyric literature in 1535; 1.—*Meistergesang*; Historic songs; 4.—German lyrics in England; 5.—Ballad of Turkish defeat at Siseg; 6.—Lutheran spiritual songs, 1524—1531; 8.—Coverdale's 'Goostly songs'; 11.—Luther and Coverdale; 12.—Speratus and Coverdale; 13.—Dachstein and Coverdale; 14.—Novel metres; 15.—Conclusion; 15.

TABLE of Coverdale's Hymns and their originals; 17.

### CHAPTER II.

#### POLEMICAL DIALOGUES (21—69).

##### INTRODUCTION (21—33).

The dialogues of the sixteenth century; 21.—Mediaeval dialogues; 22.—Dialogue in the hands of the Humanists: Erasmus and Hutten; 24.—The German dialogues of the Reformation; 26.

I. THE DIALOGUE IN ENGLAND. FIRST PERIOD: 1530 (33—50).

Roy, Barlow, Tyndale; 33.—1. 'Rede me and be not wrothe'; 34.—Its relation to Manuel's *Die krankheit der Messe*; 40.—2. 'Dialogue between a Christian Father,' &c.; 44.—3. 'Dialogue between a Gentleman and a Husbandman'; 45.—Catholic dialogues: Wingfield, Barlow, Erasmus, Sir T. More; 46.

II. SECOND PERIOD: 1547 sq. (50—69).

Scoloker's translation of Sachs' *Disputation*; 51.—English dialogues of the same school: *John Bon*; 54.—*Robin Conscience*; 55.—The 'drama of debate' in England; 56.—The Trial-motive in dialogue; Witzel; Lycaon; *Spiel von der Fasnacht*; 57.—W. Turner: his exile; 61.—His 'Examination of the Mass'; 63.—The 'En-dightment against Mother Messe'; 65.—Resch's *Dialogue of Two Sisters* translated by Lynne; 66.—Dialogues under Mary; 67.—Under Elizabeth; 68.

## CHAPTER III.

### THE LATIN DRAMA (70—164).

INTRODUCTION (70—74).

Character of the Latin drama of the sixteenth century in England; 70.—In Germany; 71.

I. SHORT HISTORY OF THE LATIN DRAMA IN GERMANY (74—105).

1. The Humanists.—'Pageants': Celtes's *Ludus Dianae*; Locher's *Spectaculum*; 75.—Satiric dramas: Wimpheling's *Stylpho*; *Codrus*; Reuchlin's *Sergius*; 77.—Later 'pageants' and satiric dramas: Schotten and Lemnius; 78, 79.—The 'Christian Terence': Chilianus's *Dorothea*; 79.—The Modern Terence; Reuchlin's *Henno*; 80.—Italian Humanist comedies in Germany: Aretino, Zambertus, Ugolino; 83.

2. The Christian Terence. The Dutch School: Gnapheus's *Acolastus*; 85.—Crocus's *Joseph*; 86.—Macropedius's *Asotus*, &c.; 87.—The South-west: The Latin and the vernacular drama; 88.—Sixt Birck's *Susanna*; 91.—T. Kirchmayer's *Pammachius*; 93.—Later dramas of the Christian Terence school: Schonaeus; *ib.*

3. Preponderance of secular subjects and tragic treatment; 95.—The Senecean Renaissance; 98.—Buchanan; *ib.*—N. Frischlin; 100.—The Strassburg School; 101.—C. Brülow; 103.—Conclusion; 105.

## II. BEGINNINGS OF LATIN DRAMA IN ENGLAND (105—119).

First period: 1524—1535. Performances at Court: Ritwyse's *Dido*; 107.—Artour and Hoker; *ib.*—Second period: 1535—1550. Palsgrave's translation of the *Acolastus*; 108.—Christoferson. School dramas: N. Udall and Ralph Radcliff; 109.—N. Grimald; 113.—His *Archipropheta*; 114.

## III. KIRCHMAYER AND BALE (119—138).

Life and writings of T. Kirchmayer; 120.—His *Pammachius*; 124.—The *Pammachius* in England; 129.—Performed at Cambridge; *ib.*—Translated by Bale; 131.—Bale's *Kynge Johan*; 132.—His relation to the *Pammachius*; 135.

## IV. KIRCHMAYER AND FOXE (138—149).

Foxe at Basel. His *Christus Triumphans*; 139.—Its Plot; 141.—Its relation to the *Pammachius*; 143.—Biblical dramas of the Protestant Restoration; 148.

## V. GASCOIGNE AND THE GERMAN SCHOOL-DRAMA (149—164).

Description of the *Glasse of Government*; 150.—The German 'Prodigal Son dramas'; 152.—Macropedius, Waldis, Gnapheus; 153.—School-dramas: Macropedius's *Rebelles*; 155.—Stymmelius' *Studentes*; 156.—German school-dramas in England; 158.—Relation of the *Glasse* to Macropedius, Stymmelius, and Gnapheus; 162.

# PART II.

## CHAPTER IV.

### THE FAUSTUS CYCLE (165—241).

#### INTRODUCTION (165—179).

Changed reputation of Germany in latter half of the century. German sorcery; 166.—Neglect of German political history; 168.—Loose treatment of German history in the drama; 171.—Sensa-

tional German news-sheets; 173.—Portents and prodigies, legends, 'stories of Doom'; 175.—The *Faust-buch*; 177.

### I. GERMAN LEGENDS IN ENGLAND (179—185).

*Bishop Hatto*; 181.—*The Piper of Hamelin*; 184.—*The Wandering Jew*; *ib.*

### II. DOCTOR FAUSTUS (185—203).

Marlowe's choice of subjects; 185.—The influence of Faustus; 189.—Greene's *Friar Bacon*; *ib.*—*The Merry Devil of Edmonton*; 195.—Barnes's *The Devil's Charter*; 197.

### III. FORTUNATUS (203—219).

Heterogeneity of the romance. Its origin and history; 205.—Story of Andolosia; 206.—Story of Fortunatus; 207.—Decker's *Olde Fortunatus*; 210.—Its compositeness; 211.—1. The 'tragedy of Fortunatus'; 212.—Influence of *Faustus*; 213.—2. The 'Triumphs of Virtue, Vice and Fortune'; 215.—The Fortunatus of the English Comedians; 218.

### IV. STORIES OF WITCHCRAFT (219—241).

Germany's part in the witch-persecution; 219.—The *Malleus Maleficarum*; 220.—The opposition; 224.—Weier; 226.—Scot; 228.—Witchcraft in literature; 231.—Middleton's *The Witch*, and the *Malleus*; 233.—Hecate in *The Witch* and in *Macbeth*, 235.—Heywood's *The Lancashire Witches* and Johann Teutonicus; 238.

## CHAPTER V.

### THE ULENSPIEGEL CYCLE (242—322).

#### INTRODUCTION (242—252).

German Jest-books of the sixteenth century; 242.—Bebel's *Facetiae*; *ib.*—Pauli's *Schimpf und Ernst*; *ib.*—Later Jest-books (Wickram, Frey, Kirchhof, &c.); 243.—Characteristics of the German Jest; 245.—Class-satire; 246.—Popular types of jester: Markolf, Ulenspiegel, Kalenberger, &c.; 250.—Their influence abroad; 251.

#### I. MARKOLF (253—272).

Origin and growth of the Markolf story; 253.—Phases in the development of Markolf's character; 254.—The dialogue of *Salomo*

*et Marculphus*; 255.—Markolf and Aesop; 260.—Markolf in France; 262.—Markolf in England; 264.—(1) Markolf the ‘proverb-maker’ (Hendyng); 265.—(2) Markolf the ‘Fool’ (Lydgate); 267.—(3) Markolf the Jester; 269.—Markolf and Scogin; 270.

## II. PFARRER VON KALEMBERG (272—282).

The Kalenberger and his jests; 272.—The English *Parson of Kalenborow*; 275.—Variations from the original; 276.—Additional incidents; 279.—Other traces of the Kalenberger in England; 281.

## III. ULENSPIEGEL (283—293).

Ulenspiegel’s jests; 283.—History of the book; 285.—Copland’s *Howleglass*; *ib.*—Owlglass in Scotland; 287.—In England; 288.—Ben Jonson; 289.—Ulenspiegel and Robin Goodfellow; 291.—Ulenspiegel in the eighteenth century; 292.

## IV. FRIAR RUSH (293—322).

The historical Rush of Esrom; 294.—Bruun’s hypothesis; 295.—The Danish legend; 297.—The Low Saxon, High German and Danish metrical versions, and their divergencies; 298.—Rush’s after-history: the Zeno legend; 302.—The English *Friar Rush*; 303.—Its variations: influence of Ulenspiegel (304) and Robin Goodfellow; 305.—Rush naturalised; 306.—Rush in after literature; 308.—*Friar Rush and the Proud Woman of Antwerp* and Macchiavel’s *Marriage of Belphegor*; *ib.*—Decker’s *If this be not a good play the Divill is in it*; 309.—Its supposed relation to Macchiavel’s *Belphegor*; 310.—Its main plot in part drawn from *Friar Rush*, in part modelled on it; 311.—Character of the play; 316.—Jonson’s allusion to it; 318.—Jonson’s *The Devil is an Ass*; *ib.*—Conclusion; 321.

# CHAPTER VI.

## ‘THE SHIP OF FOOLS (323—378).

### INTRODUCTION (323—341).

The Fool literature of the sixteenth century; 323.—Fool literature in England before Barclay; 325.—Wireker’s *Speculum Stultorum*; *ib.*—Lydgate’s *Order of Fools*; 326.—Brandt’s *Narrenschiff*; 327.—Sources of its popularity; *ib.*—Its precursors; 328.—Series of Fools in the Fastnachtspiele; *ib.*—The Ship: Teichner, Oestvo-

ren, Gallus; 331.—Classification of Brandt's Fools; 333.—Fools of vice and crime; *ib.*—Insolence; 334.—Riot; *ib.*—Sloth; 335.—Presumption; 336.—Comparison with Lydgate's Fools; 338.—Influence of Brandt in Germany; 340.—German and English Fool Satire; 341.—English Satire of class types; *ib.*

#### I. KNAVES (341—350).

*Cock Lorell's Bote*; 341.—The plan partly that of a 'religious order' of knaves; 343;—partly that of a 'Ship' of knaves; 344.—The voyage; its relation to that of the *Schlaraffenschiff*; 346.

#### II. COURTIERS (350—357).

Skelton's *The Bowge of Court*; 350.—Skelton and Brandt; *ib.*—*The Boke of the Three Foles*; 351.—Tendencies of his satire; 352.—*The Bowge of Court*; *ib.*—Relation to the *Narrenschiff*; 353.

#### III. BEGGARS (357—362).

Copland's, *The Hye Way to the Spyttel-house*; 357.—Comparison with Brandt; 361.

#### IV. ORDERS OF KNAVES AND FOOLS (362—368).

Awdeley's *Fraternity of Vagabonds* (362) and *Quartern of Knaves*; 363.—Position of the *Quartern* in English satire; 364.—*The XXV Orders of Fools*. Its relation to the *Bote*, and to the *Ship of Fools*; 365.—Detailed view of its derivation; *ib.*

#### V. THE SHIP AMONG THE LATER ELIZABETHANS (368—378).

Sources of its popularity; 368.—Cox, the Emblematisers, Van der Noot; 369.—Localised Ships of Fools, 370.—Allusions to the *Ship* in the dramatists; 371.—The 'Ship of Drunkards'; 372.—Tarlton's *Horse-load of Fools* 373.—Armin's *Nest of Ninnies*; 375.—Later satirists; S. Rowlands; 377.—The Theophrastians; 377.

## CHAPTER VII.

### GROBIANUS AND GROBIANISM (379—398).

#### INTRODUCTION (379—389).

Grobianus and Faustus; 379.—German Grobianism; 380.—Anti-grobian Satire; 380.—Ironical *Encomia*; the humour of the disgusting; 381.—*Grobianus' Tischzucht*; 383.—Dedekind's *Grobianus*; 384.—Scheidt's additions to it; 'Grobiana'; 386.—Scheidt and Brandt; 387.

---

I. GROBIANUS IN ENGLAND. 1. *The Gul's Horn-booke* (389—393).

Barclay's St Grobian; 389.—English and German Grobianism; 389.—Decker's *Gul's Horn-booke*; 390.—The Grobian and the Gallant; 391.

II. GROBIANISM IN ENGLAND. 2. *Grobiana's Nuptials* (393—398).

Scholarly Grobians; description of *Grobiana's Nuptials*, 393.—After-history of the *Grobianus*; Swift; the *Compleat Booby*; 397.—Conclusion, 392.

APPENDIX I. The date of Coverdale's Hymns (399—402).

APPENDIX II. Chilianus' *Dorothea* in Denmark (403—4).

APPENDIX III. The English Prose versions of *Fortunatus* (405—7).

INDEX (408—426).

## INTRODUCTION.

THE present volume is an attempt to lessen the obscurity of that tract of international literature in which Barclay's *Ship of Fools*, Marlowe's *Faustus*, and Decker's *Gul's Horn-booke* are luminous but isolated points. To these isolated points I have endeavoured to supply in some degree both the intervening detail and the continuous background; in other words, to give a connected and intelligible account of the phases of German literary influence upon England in the sixteenth century. I venture to emphasise the epithet in the last clause. It is exclusively a *literary* influence with which I propose to deal. With the transmission of doctrines or ideas, I am concerned only so far as they coloured or inspired literature imaginative or poetic in form. Protestantism, the most colossal of all witnesses to 'German influence,' is of interest here only as it took shape in hymns, dialogues and dramas. Luther is, for us, solely the author of *Ein feste Burg*, Melanchthon, the deviser of the legend of Eve and her unlike children, immortalised in drama by Birck and Sachs.

Whether, in this strict sense, Germany, in the sixteenth century, exercised any 'literary' influence at all, is no doubt a 'question to be asked.' To all appearance, no European people was less qualified for the work. To

the most strongly-marked literary tendency of the time it gave almost no response. Everywhere else the demand for elegance and harmony of literary form was being raised with continually greater insistence and authority; in Germany, outside the sphere of Humanists, it was a cry in the wilderness, which the most approved literary orthodoxy ignored with impunity. The old court-poetry of Thüringen and the Upper Rhine was as completely forgotten as that of Provence, and had left scarcely more palpable traces behind; nor did sixteenth-century Germany, like France and Spain, and even England, resume the broken continuity at a new point by the aid of Petrarch. No school of Italianate versifiers endangered the popularity of the *Narrenschiff*, or ruffled the industrious equanimity of Hans Sachs. To a degree unparalleled elsewhere in Europe, literature had become plebeian. The complete decay of the courts as centres of literary culture,—a decay against which only here and there a Mathilde of Würtemberg raised a forlorn protest,—had thrown literature into the hands of a bourgeois class not only itself lacking in the old courtly graciousness and refinement, but indisposed by a century of life and death feuds with the leagued nobility to revive its memory; and the antagonism was heightened by internal revolutions, which, with rare exceptions (as at Nürnberg), put every town in the hands of its least cultivated class. It was a literature of the workshop and the stall, a literature of men habitually familiar to brutality, plain-spoken to grossness, drastic in their ridicule, ferocious in their earnestness, not without sterling honesty, but wanting in the grace of good manners, in chivalry, in subtle and delicate intellect.

The repelling rudeness and roughness of this literature was, nevertheless, closely bound up with its dis-

tinative power. The decay of the courts and of the courtly poetry was only the most palpable symptom of one of those epochs of general social disintegration in which few poets but many satirists are born. Never had the disruption of German society been more profound or appeared more helpless than in the closing decades of the fifteenth century. Moral debasement had proceeded step by step with political disruption ; the empire-broken up by internal dissension, directly threatened by the Turk without, saw its former dependencies consolidating themselves in the shelter it provided ; the corruption of the Roman clergy, which Germany shared with the rest of Christendom, was there aggravated by the impotence of the secular government, and by the grossness of the laity. State and Church, noble and citizen, absorbed in private indulgence or in mutual feuds, appeared equally incapable of providing a medicine for the common malady. Of such a society satire was the natural speech. Its inexhaustible antagonisms were reflected in a literature of equally inexhaustible raillery and abuse. The fertile field of class antipathies and local jealousies produced a rich harvest of malicious jests. The sly peasant, the licentious priest and monk, the gluttonous Saxon, the naïve Swabian, were standing butts of ridicule. The vanities and perversities of women were laid bare with remorseless zest by the unruly subjects of the 'last knight of chivalry'; and the Carnival playwrights of Nürnberg founded whole plays on ridicule of the 'Fools of Love.' Often such special attacks were only the casual discharges of a general satiric animus, or a pessimism too profound to discriminate its objects. The triumph of lawless unreason, the frail tenure of all the ideal bonds of society, drove every quick and sensitive mind to find relief in derision

and despair; and the most characteristic as well as most famous poem of the age was that in which Sebastian Brandt, resuming with a sterner bias the mediaeval 'satire upon all classes,' summoned the greater part of his contemporaries to the *Ship of Fools*.

With the first quarter of the sixteenth century this ground-tone of satire, the last bequest of mediaevalism, far from dying away, only grew more fierce and dominant under the influence of the double revolution which for northern Europe inaugurated the modern world. Neither Humanist nor Protestant dealt much in the hollow sarcasms of despair; but their positive enthusiasm, rich and buoyant as it was, habitually took a polemical form; their larger command of the resources of beauty and knowledge was employed chiefly in giving brilliance and keenness to their weapons. Precisely here, however, lay the advance. The savage scorn of fifteenth century satire rang still incessantly from the pages of Hutten and of Luther; but it had gained enormously in imaginative range, in moral depth, in tragic intensity. Its conventional scenery, its recurring stock-types were enriched by a Titanic fancy, caught from Lucian and Aristophanes, which played familiarly with gods and heroes, and ranged with easy step from heaven to hell; the vivid mythology of the Greek Hades and the mediaeval paradise, Pluto on his throne, St Peter at the gate, were called in to the aid of sublunary polemics. The political foe appears as an emissary of the lower world, or as its favoured *protégé*; infernal councils discuss his prospects and send him reinforcements and encouragement; or he is dragged after death before a higher tribunal, which listens with a deaf ear to his *apologia*, and exultingly dismisses him to endless tortures.

Applied theology of this sort was evidently capable

of much grim humour, of a kind likely to be made the most of by a generation of pamphleteers ; but to the more mystic side of the Protestant genius it also represented sober and terrible truth. The 'old savage enemy' had been transformed by Luther from a half-ludicrous legend to a threatening and imminent peril. The colossal institution of the Roman Church was become a palpable result of infernal councils, an all but triumphant effort of Pluto to rule the world. To the little band of reformers their own struggle was only a particular moment, near the close, of a sublime encounter of heaven and hell, the changing phases of which made up the greater part of what they understood by history. It was the most heroic and the most inspired moment of the new religion. For a few years the Protestant faith, on the whole so unkind a nurse to poetry, passed through one of those rare crises of exalted imagination which twice or thrice repeated have given it a fair title to figure in the history of *belles-lettres*. The age of Luther produced nothing artistically comparable to D'Aubigné, still less to Milton ; but its work, rude and rough as it was, was both in its kind unique and for its purpose extraordinarily effective. Luther's Spiritual Songs, with their trenchant simplicity, their bursts of fiery and heroic energy, their human and manly tenderness, were something more than adaptations of the hymn of the Catholic Church to a differing ritual and doctrine. And the mingled scorn and fervour of the Protestant genius never found more energetic expression than when Manuel drew the death-bed of the Sick Mass thronged with helpless counsellors and idle prescribers, or when Kirchmayer sketched in vague and colossal dramatic outline the league of pope and devil, capturing the church of Christ by an irresistible *coup d'état*, or aiding the most

implacable enemy of the Reformation in his desperate struggle with his people.

In England the literary position of Protestantism was notoriously very different. As a political movement it produced convulsions hardly less violent and far-reaching than in Germany; as an intellectual movement it was from the first respectable if not eminent; but as a literary movement it was, from the first, insignificant. Its memorable names are those of statesmen, divines, martyrs, rather than of great writers; Tyndale and Coverdale, Cranmer and Latimer, Bale and Foxe, luminaries in the annals of Protestantism, are phantoms in the history of literature;—learned expounders, or heroic defenders, of a faith which they neither originated nor by any striking originality of thought or expression made their own. No one rivalled Luther's felicity in grafting abstract doctrine upon the native mother-wit of fable and proverb. No one uttered the wrath and ardour of English Protestantism in ringing verse like his. The fierce irony of Hutten, the sly laughter of Manuel, the sombre imagination of Kirchmayer, were feebly reflected in the polemics of a revolution which of all others bears the deepest stamp of English character, the faintest and most fugitive of English genius.

It would have been strange nevertheless if a struggle admittedly inspired by Germany had been carried to the close without an effort to adopt her finer weapons. A series of such efforts was in fact made, which, partly from the incompetence of their authors, partly from the vicissitudes of Henry's theological taste, fell into an obscurity which to this day has only here and there been dissipated. The literary war of the Swiss and Alsations with the 'sick' and 'dying' Mass, of which Manuel's dialogue was the most brilliant effort, was faintly con-

tinued by the two English refugees in Strassburg who devoted a well-known tract to the inquiry where it should be buried. It was first proscribed by the king, and then recanted by its converted author. A few years later Miles Coverdale essayed with his ungifted pen to translate the spiritual songs of Luther. Another royal proscription thrust his volume into an obscurity which permitted Sternhold and Hopkins to rule undisturbed over the infancy of the English Hymn. The trying last decade of Henry's reign saw the great papal drama of Kirchmayer acted at Christ's, translated and imitated by Bale; but the actors and the college incurred the formidable wrath of Gardiner, the translation has never been heard of, and the imitation—which I venture to detect in the *Kyng Fohan*—was unknown but the other day. In lyric, in dialogue, in drama, the imaginative language which the genius of German Protestantism had shaped out for itself was caught up with fitful and momentary energy, and then as rapidly forgotten.

Thus Germany contributed merely a set of parentheses to the literature of the Reformation, itself a parenthesis in the national literature of England. It was in the wide region outside, of popular jest, of satire often serious, often steeped in theological ideas, but not primarily inspired by the war of Churches, that her work left more enduring traces. The *Ship of Fools*, translated in the first years of the century, helped essentially to accelerate the development of English satire; Rush and Ulenspiegel, translated at one of the keenest crises of the Reformation, became standing figures in English jest and legend. And the two generations which followed developed new points of contact which proved the most fruitful of all. The political triumph of Protestantism was no sooner assured than the literary tide began to ebb away with a

sustained and gathering force to which a far more brilliant and vigorous literature must have succumbed. Court and University sowed the seeds of a new Humanism still less in sympathy than the old with the religion of Luther which most of its disciples ostentatiously professed. The work of a professional literary class, trained on Petrarch and Ovid, Seneca and Boccaccio, Cinthio and Guevara, cheapened the pious testimonies of citizen and divine against the Roman Antichrist. A vigorous and brilliant culture of literary form placed the most formidable obstacle in the way of a return to the Egypt of Bale and Coverdale. The monotonous ferocity, the vague and tremulous drawing, of Protestant satire, gave way to a quick and observant humour and a style touched with the vividness and pungency of an etching. The Morality was swept away before a drama which consciously strove to hold up the mirror to nature, and not to a symbolic substitute for it in the didactic mind.

The result of all these steps was, on a first glance, completely to alienate literary England from literary Germany. If she had imitated feebly and abortively, while her course lay parallel, all imitation was now apparently put out of the question by her changed aims in art. Nevertheless, it was precisely in this epoch of brilliant progress in the one country, of slow decay relieved by uncertain symptoms of a yet remote recovery in the other, that their literary intercourse bore the richest fruit to the richer, as it notoriously did to the poorer of the two. In literary form Germany could now less than ever teach her rival; but the raw material of satire and tragedy thrown out in three generations of revolution had capacities yet unexhausted, of which the Elizabethan genius, though approaching by a quite different route, was qualified to make the most. The gross and drastic realism,

the bold and familiar play with the supernatural, the Grobianism and Titanism, in which Germany of the sixteenth century had uttered her cry of mock exultation or of tragic exasperation at her evil state, fell in with the literary fashions of the most brilliant and sanguine age of English history, and offered acceptable pabulum to a school of satire steadily developing a genius for close observation, and a school of tragedy persistently striving after thrilling effects. The indignant irony, the feverish fancy of the social reformer were taken at their æsthetic valuation. The energetic phrases in which character had uttered its protest against evil, found echo and applause where energetic phrases were keenly relished for their own sake. Dedekind's ironical exposure of the gross manners of his countrymen was reproduced in the *Gul's Horn-booke*; the *Ship of Fools*, reprinted after an interval of sixty years, was still an unexhausted model of satire. And a new source of dramatic effect, destined to create a prolonged attraction on the English stage, was discovered in the dealings of some specially audacious or specially favoured hero with supernatural Powers: Faustus, by his pact with the devil, Fortunatus by the gift of Fortune, careering with privileged security through a romantically uncritical world; or a whole convent of ascetics seduced into gluttonous riot by the dissimulated devilry of Friar Rush. Possibly we ought to add the Shakspearean Prospero, but the German origin of the *Tempest* is still at most a plausible guess. In this region of half-grandiose, half-humorous supernaturalism lay, beyond a doubt, the most important direction of German influence, as of German achievement, both in mass and in result. It was the line of cleavage at which the otherwise difficult barrier of national unlikeness yielded ready passage. Marlowe's *Faustus* was not only a play of

immense popularity ; it was not only, as I hope to render probable, the starting-point of a series of related dramas, the *Fortunatus* among them, all more or less evidently coloured by its influence. It introduced a new class of situations into English drama, by substituting, as a tragic motive, for the ferocious murders and ill-omened love-intrigues of the Italian novel, for the family feuds and incests of Seneca, and the military casualties of the English chronicle, the exciting suspense of a diabolic pact.

To sum up in a single trait. If the extraordinarily gifted, yet relatively barbarous, Germany of the sixteenth century was, in pure literature, of any moment for its neighbours, it was chiefly in so far as it made literary capital of its barbarism. Its moods of ideal aspiration, its laborious efforts to honour virtue and nobility, its pictures of pure women and heroic patriots, counted for little. The endless Susannas and Josephs of its stage remained as unknown as Fischart's brilliant celebration of the peaceful league of Switzerland and Alsace, or Hans Sachs' quaint retelling of the most famous stories of all literature, or the unpretending beauties of the popular song. Even the Humanists of Germany, proficient though they were in the graces of Humanist style, commonly arrived at European fame, if at all, by some other channel. Had Horace, like Frischlin's Cicero, revisited the upper world, northern Europe could have shown him no Latin lyrics so graceful and sparkling as those of Celtes and Hessus ; but Celtes and Hessus remained provincial stars when Markolf and Ulenspiegel and the *Ship of Fools* had the ear of Europe ; and all the fascinating brilliancy of Hutten did not save him from being celebrated abroad chiefly as the advocate of an unedifying drug. It was not in her casual and fitful wooing of beauty that Germany caught the attention of the world, but when she grappled

with ugliness, plunging breast-high in the slough and derisively impaling its creeping population of foul things. Clowns and fools, rogues and necromancers, were, so far as most Englishmen knew, the staple literary product of the German people. They heard only the harsher and fiercer notes of its voice; in *Grobianus*, its ironical scoff at brutal manners; in the *Ship of Fools*, its harsh rebuke of presumption and of brutality in the name of sober self-concern and civil decorum; in *Ulenspiegel*, its robust effort to capitalise the humour of every conceivable offence against decency; in *Faustus*, its cry of blended horror and exultation at the boundless aspirations of emancipated intellect.

I need hardly add a word upon the plan of the present volume. The two parts are devoted to the two wholly distinct regions of literary intercourse which I have indicated. The first three chapters attempt to follow out in detail the brief and, on the whole, abortive literary influence of German Protestant art, in its several branches,—the hymn, the dialogue, the drama. The second part deals with the more fruitful influence of secular literature,—roughly grouped under four heads,—which for the purpose of international intercourse are fairly adequate,—the literature of sorcerers, of jesters, of ‘fools’ and of Grobians.

## PART I.

### CHAPTER I.

#### LYRICS.

IN introducing the first printed edition of Wyatt and Surrey to his readers, the publisher, Tottell, thought it necessary to dwell with some emphasis on the strange fashion of the new poetry. ‘If perhappes some mislike the statelinesse of stile removed from the rude skill of common eares,.....I exhort the unlearned, by reading to learne to be more skilfull, and to purge that swine-like grossenesse that maketh the swete maierome not to smell to their delight<sup>1</sup>.’ And in a great degree the implied judgment was true. If Wyatt and Surrey did not found the English lyric, as popular criticism is apt to assume, they undeniably gave it a new development very sharply distinguished from the old. *German and English lyric literature.* c. 1535.

No such definite turning-point can be found in the course of the contemporary lyric literature of Germany. The tide was no doubt setting gradually in the same direction; and the growing cultivation of music at the courts told entirely in favour of a more refined and artificial lyric style. But courtly Humanists like Surrey, or Ronsard, did not yet write in German; Conrad Celtis,

<sup>1</sup> Tottell's *Miscellany*, ed. Arber.

perhaps the nearest parallel to Surrey among the German Humanists, was only the first of Latin poets, and Ronsard had nearly a century to wait for the doubtful honour of inspiring Opitz<sup>1</sup>.

The superiority of England is less clear when we compare the unreformed songs from which Tottell strove to wean his readers, with the abundant stores of contemporary Germany. It is true that Tottell was far too contemptuous; in his zeal to commend the dainty refinement of the new songs, he was a little blind to the genuinely lyrical quality of many of the old. There are quite enough vivacious carols<sup>2</sup>, tender and graceful love-songs<sup>3</sup>, spiritual-songs<sup>4</sup>, lays of summer and spring<sup>5</sup>, to vindicate the often nameless poets of the 15th and early 16th century from the charge of complete barbarism. But such a charge would be still more out of the question as applied to the lyrics currently familiar among Tottell's contemporaries in Germany. It may even be said that if there was one branch of literature in which, in the first quarter of the century, England might distinctly have learnt from Germany, it was that of the popular lyrics,—those *Volkslieder* which are, after all, among the chief glories of German poetry. In range of subject, in variety of emotion, in beauty and vigour of line, in

<sup>1</sup> Cf. his *Buch der deutschen Poeterey*.

<sup>2</sup> Cf. Wright, *Songs and Carols of the 15th century*. Ritson, *Ancient Songs and Ballads*: e.g. No. 6 (Syr Christenmasse).

<sup>3</sup> E.g. 'My hart, my mynde and my hole powre,' with music by Taverner, in the unique 'Boke' of 1530 (Br. Mus.), which deserves to be reprinted entire. Some quotations are made by Ritson, u.s. and Chappell *Music of the O. T.*

<sup>4</sup> E.g. the beautiful 'In youth and age in welth and woo Auxilium meum in domino,'—in the above *Boke*. Cf. also Wright, *Songs and Carols of the 15th century*.

<sup>5</sup> E.g. 'Pleasure yt ys To here I wys' in the *Boke*.

sure, instinctive acquaintance with the inexhaustible wells of lyric inspiration, very little that existed in England at the same time can compare with the treasure of songs first collected on a large scale by Georg Forster<sup>1</sup>. They are the result of natural lyric faculty working in the presence of a very rich literary tradition, now wholly independent of it, now involuntarily catching its likeness. They are unsurpassed in that artless utterance of simple feelings which goes so far towards lyric pathos,—the mere ‘Ach Got wie weh thut scheiden!’ or brief snatches of verse such as this, which, for simple intensity, could not easily be paralleled in the English lyrics of the time,

Ach Elslein, lieber bule,  
wie gern wär ich bei dir;  
so fliessen zwei tiefe wasser  
wol zwischen mir und dir<sup>2</sup>.

But this natural lyric style is enriched at a number of points by traits caught from that *Minne*-cult which in England was at most an exotic and short-lived growth. The writers of these lyrics were certainly not a race of laborious epigoni like the Meistersänger, but something of the quality of the extinct *Minnelied* reappears in not a little of their verse, its union of refined artifice of form with artless unreserve of expression, its singing and lilting lines, its unsought distinction of manner, its gracious and noble passion. They continually recal the beautiful

<sup>1</sup> Ein auszugs guter alter un newer Teutscher liedlein...Nürnberg, 1539. The first extant printed collection is Oegier's, 1512 (Goedeke § 110). I have used Uhland's great collection (*Die deutschen Volkslieder*) and Tittmann's excellent *Liederbuch des 16ten J.* The well-known *Des Knaben Wunderhorn* of Arnim and Brentano is of course more comprehensive than the latter, but useless for critical study.

<sup>2</sup> Forster's *Samlung*, 1540, pt. II., Tittmann *Ldbch* I. 84.

but half conventional symbolism of the *Minnelied*, by which the red rose, the nightingale, the daisy, the falling leaf served to interpret the play of love. Classic situations of the *Minnelied*—such as that of the *Tageweise* or *Aubade* the parting song of lovers at dawn, upon the *wächter's* cry,—are transferred from the feudal society to which they naturally belong into close company with peasant courtships by the spring or the *Fensterle* still familiar in Tyrol.

*Meistergesang, 'Historisches Lied.'*

And, apart from such suggestions of a past which in England had scarcely existed, the lyric of the 15th and 16th centuries underwent peculiar developments of its own. Nothing in English society quite resembled two institutions which first took definite shape in the age of Maximilian I., and each of which set its stamp upon the national lyric. The poetic guilds, of which the *Meistersänger* were the highest rank, carried it into a scholastic region in which all sense of the true value of form was lost in excessive elaboration of it, and the elaborate metrical machinery of the *canzone* applied unconcernedly to the homeliest bit of *genre*<sup>1</sup>. On the other hand, no small number of the 'historic songs' of Germany proceeded from the very different school of the *Landsknechte*<sup>2</sup>. Wholly careless of niceties of style, often barely satisfying the simplest laws of verse, writing hastily in the intervals of action<sup>3</sup>, their strength lay in literal narrative, in the

<sup>1</sup> E.g. *Von einem Freiheit und von Cunz Zwergen* (Leipzig 1521), and *Von einem Schneider und Schuhmacher* (o. O. u. J.) (repr. Tittmann, *Liederbuch*, pp. 363, 374);—the one relates a grotesque village incident, the other a neighbours' quarrel, in stanzas of fourteen lines.

<sup>2</sup> The *Historische Lieder* are collected in the great work of Liliencron.

<sup>3</sup> Cf. e.g. the French account of the siege of Metz, where the author, a *lansquenet* who had taken part in it, describes himself as

eloquence of bare facts. Instead of the business-like assiduity of the *Meister*, their cultivation of poetry was a casual and perfunctory service, of which the reward was a style rugged and graceless enough, but natural, and with all its dryness, not incapable of a certain stern pathos.

The germs of the Meistersänger school no doubt existed in the annual performances of Mysteries by the English Gilds, and perhaps nothing in Middle English literature is so like the normal *Meistergesang* as the occasional strophic passages in the Towneley plays. But the germ did not develope; the culture of poetry never passed, among the English craftsmen, from an extraordinary and ceremonial effort into a systematic occupation. The analogy of the English political ballads to those of Germany is no doubt closer. But, apart from the vastly greater mass of the latter, the fundamental social differences of the two countries are in themselves a ground of contrast. The enormous complexity of German politics, the divisions of states, the open feuds of city, noble, peasant, knight, the predominance in war of personal loyalty and class-feeling over patriotism, make German historic song a genus apart, with an atmosphere, scenery, and motives almost wholly strange to that of England.

And, finally, with still less of precise analogy to any literary growth yet known in England, was the Spiritual Song, as renewed and recreated by Luther, which must be discussed more at large. *Geistliches Lied.*

Reserving for a moment the class last mentioned, scarcely a stray ballad or two, out of this immense harvest of songs, can be shown to have crossed the sea. Douce *German lyrics in England.*

writing beside the town fountain, over a dish of bacon. (Leroux de Lincy, *Chants historiques*, II.).

was inclined to connect the famous *Nut-brown Maid* with the equally famous 'ich stund an einem morgen an', translated by Bebel in his *Facetiae* ('*Vulgaris cantio*'); the resemblance is however as he says only general, and appears to me quite inconclusive. The 'ich stund' is an ordinary lovers' parting in dialogue, differing from the ordinary *Aubade* chiefly in the 'fräulein's' eagerness to fly with her 'knabe': the essence of the *Nut-brown Maid* is that the parting is only feigned. A more certain, though less important, instance has I believe never been noticed. The Stationers' Register, under 14 Sep. 1593, gives the mutilated titles of two German 'bookes,' in the following form:

[1.] John Wolf. Entred for his Copie under thandes of Master Harwell and Master Woodcoke a booke intituled *Warer erhaltenen underlang ten victori, so undter der furst*, &c.<sup>1</sup>

[2.] Thos. Creede. Entred for his Copie under thandes of Master Harwell and Master Woodcoke a descripcon intituled *Marhastige gluckliche Reittung aufs Crabaten, von Dem Sigder Christen*, &c.<sup>2</sup>

In the margin of (2), where the name of 'John Wolf' has been crossed out, is a note stating that 'this ballad of the overthrowe of the Turke' is turned over to Creede, with Wolf's consent.

We have then clearly the trace of a German ballad, itself apparently not known<sup>3</sup>.

About its subject however there is no doubt. In September 1593 'the overthrowe of the Turks' could only refer to the great rout before Siseg the same summer. It

<sup>1</sup> I.e., probably 'Warer [Bericht einer] erhaltenen und erlangten victorie, so unter dem furst' &c.

<sup>2</sup> Warhastige [? Beschreibung einer glücklichen] &c.

<sup>3</sup> It is not to be found in Liliencron.

was still fresh in memory when Knolles wrote, and he has described it at length<sup>1</sup>. Hassan the 'Bassa of Bosna' came with an army of 20,000 men to attack the convent of Siseg in Croatia which was at the same time a fortress. Auersberg, governor of Carolstadt, collected forces from Carinthia, Croatia and Silesia, marched upon Siseg, and, after a momentary check, succeeded in putting the Turks to flight, with a computed loss of 18,000 of their number, as well as rich treasure and arms.

I turn to consider more specially the Spiritual Song<sup>2</sup>. *Geistliches Lied*. The phrase itself happily expresses the close kinship with the 'Song' to which almost every good Hymn bears witness, and the literature of Spiritual Songs, to which Luther gave the most vigorous impulse, reflected almost every feature of the secular lyric. At a national crisis like the Reformation lyric inspiration of a certain order was indeed not difficult to catch, and it is not surprising that even when it takes the form of a mere statement of doctrine, as in the Creeds, the Hymn resembled rather a war-song of the Protestant host than a piece of prescribed ritual. But there was also, as in Catholic times, a systematic imitation of the secular song. Not only their rhythms, not only their favourite situations, but even their special phraseology were adopted. There were spiritual Hunting and Drinking songs<sup>3</sup>, spiritual *Reuterslieder*, and even spiritual *Aubades*, where the Christian soul described its pursuits, its thirsts, its conflicts in the

<sup>1</sup> *History of the Turks*, p. 1020 f. (ed. 1621).

<sup>2</sup> Philip Wackernagel, *Das deutsche Kirchenlied*, 5 Bde. Bd. III. contains the Hymns of Luther and his followers. Cf. also Hoffmann v. Fallersleben, *Das geistl. Lied vor Luther*.

<sup>3</sup> The most notorious example is the 'Den liebsten buhlen den ich han,' where the Muskateller in the Wirthskeller is replaced by the Deity on his throne.

world, and its awakening at the call of the Christian watchman<sup>1</sup>. And where imitation was not carried out to this tasteless extent, the spirit and manner of the *Volkslied*, in all its flexible variety, influenced unconsciously the writers of the Spiritual Song, and gave it a measure of the same many-sided power. It was thus not a mere subdivision of the lyric literature of Germany, but in some sense a résumé of it, which would meet the English fugitive as he turned over the pages of the Lutheran Enchiridion.

*Coverdale.* Such a fugitive was Miles Coverdale, whose *Goostly Psalmes and Spiritual Songs* are among the most sincere and laborious monuments to Luther in the English language<sup>2</sup>.

*Lutheran  
Hymn-  
ology* 1524  
-31.

To put the result in one word, it may be said that Coverdale had a very full knowledge of the first period of Lutheran Hymnology, from 1524 to 1531, and of that period exclusively. It is the period of Luther's complete predominance among Protestant hymn-writers; his round score of Songs and Psalms are still the staple of every collection. Fellow-workers were already abundant, but the field was not yet crowded by the legion of mediocrities who later excited his indignant warning against 'sham masters<sup>3</sup>.' The productions of the little Wittenberg

<sup>1</sup> Sachs: *Eine geistliche Tageweise*, 1525 (Tittmann, *Ldbuch des* 16. J., II. No. 34). Cf. the version of 'Ich stund an einem morgen an' (ib. No. 38).

<sup>2</sup> The relation of Coverdale's Hymns to Luther's was first pointed out by Prof. A. Mitchell (*The Wedderburns*, Edinb. 1868). My own results were obtained independently and published in the *Academy* of 31 May, 1884. A letter by Prof. Mitchell appeared in *Acad.* 28 June, 1884, supplementing them. The following account contains some criticism of his supplemental results.—Wedderburn, as a Scotsman, lay outside my plan.

<sup>3</sup> Tittmann, *Liederbuch*, p. 185.

circle formed from the first a modest appendix to his own. Paul Speratus, and Elizabeth Creuziger, the faithful Justus Jonas, and the ex-monk Styffel, figure in the earliest *Enchiridia* of Erfurt and Wittenberg. Nürnberg, the stronghold of the Reformation in Franken, almost instantly followed, with Councillor Lazarus Spengler, one of the earliest of Luther's adherents there, and Master Hans Sachs. Somewhat apart, even in hymn-writing, from the main Lutheran movement, stood Strassburg. Few of the Strassburg hymns ever appeared in the Saxon and Bavarian *Enchiridia*; yet no city possessed so long a list of noted poets<sup>1</sup>. The preachers, Capito and Symphorian Pollio (Althiesser), the painter Vogtherr, the musicians, Dachstein and Greitter, the ex-monk Oeler, and Butzer's friends and helpers, Wolfgang Masculus and Conrad Hubert, were each the author of one or more hymns, of which, however, through the doctrinal isolation of the city, only three appear to have gained a vogue<sup>2</sup>.

Beyond this area, the early Hymns were relatively few, and dialect interposed a more serious barrier to their rapid diffusion. Switzerland in the south and the vast region of Plattdeutsch in the north, number many names of note,—Ambrose Blaurer at Constanz, Nicolaus Hövesch at Brunswick, Johann Agricola, the early folklorist, at Eisleben and the dramatist Burkard Waldis at remote Riga; but though often translated and collected at a later time, they contributed almost nothing to the early and classical *Enchiridia*.

The early Lutheran Hymnology was thus drawn from a somewhat broad local basis. Each district moreover had certain individualities of manner or of subject; its

<sup>1</sup> O. Lorenz u. W. Scherer : *Geschichte des Elsasses*, S. 182 f.

<sup>2</sup> Dachstein's *An Wasserflüthen Babylon's*, and two of Greitter's. Scherer, u. s.

characteristic trait of style, its favourite rhythms and keys of feeling. Each had in some sort a lyric school of its own. Wittenberg was under the immediate influence of the manner of Luther; and Luther's manner bore in the highest degree the stamp of his mind. Whether he re-wrote Catholic hymns, or versified psalms, or found good words for some of the 'good tunes' which 'the devil' had hitherto monopolised, he is always bold, energetic, simple, disdainful of mere flowers of language as of mere prettinesses of rhythm, but with bursts of rugged harmony, and often defying the conventions of modern hymn-writing by drastic picturesqueness of phrase<sup>1</sup>.

At Nürnberg, on the other hand, the literary atmosphere was coloured not by one dominating personality but by a vigorous popular tradition. Nürnberg was the focus of the Meistergesang, and the Nürnberg hymns are full of its manner and method. The busy production that went on among the craftsmen of the poetic guild entered too largely into the intellectual life of the city to be without influence; and moreover the most distinguished of Nürnberg hymn-writers was, as has been said, the master of Master Singers Hans Sachs. Sachs and Spengler, as well as Paul Speratus who, though he wrote at Wittenberg, had spent most of his eventful life in Bavaria, all show in various degrees the characteristic effort of the Meistersinger to combine a style full of caprice and surprise in detail with elaborate symmetry

<sup>1</sup> In rhythm he had a noticeable fondness for the *unsymmetrical*. E.g. the striking five-syllabled lines which open the *Abgesang* of *Ein feste Burg*: '*Der alt böse Feind, Mit ernst er's jzt meint,*' &c., which later versions softened into iambics. In regard to stanza, Luther decidedly favoured those more unsymmetrical forms of it in which the number of lines is not a multiple of the couplet,—seven or nine lines rather than six or eight. He loved too the single unrhymed line at the close.

in large masses. The mixture of long and short lines, the internal rhymes, and the complex stanzas, which secured this in a fashion for the secular lyric, are freely adopted in several of the Spiritual Songs of Sachs; and Speratus, after his stormy and adventurous life, retained sufficient relish for the most recherché virtuosités of the school, to lavish them in ample measure upon his version of the *Credo*.

The Strassburg work, finally, was marked by the influence neither of a commanding master, nor yet with the mannerisms of a school. The most important writers, the only ones whose voice found any echo beyond Alsace, —were musicians, with the musician's love of simple and regular rhythms; and the rhythms of many of the Strassburg hymns are simple and regular to the verge of insipidity<sup>1</sup>. The short lines for instance, and the internal rhyme, are as unfamiliar to them as the less melodious unevennesses of the Wittenberg school.

Of the Lutheran hymnology of 1524—31, Coverdale's *Coverdale's Goostly Songs* is, as has been said, a fair selection. The majority of his originals first appeared in one or other of the *Enchiridia* of 1524—5; the latest of them in 1531<sup>2</sup>.

<sup>1</sup> E.g. Greitter's *aabbccddeeffg*, *aabccbddeffe*; or Dachstein's *ababccdeed*.

<sup>2</sup> Prof. A. Mitchell, who assigns a comparatively late date to the 'Goostly Songs,' says that they contain an imitation of a hymn which first appeared in 1540. In his own list of the supposed originals, are only two to which he can possibly refer, (1) Coverdale's 'Hymn to the Holy Ghost,' which he assigns, though doubtfully, to a certain: Ein Gesang vor anfang der kinder predigt (Wackernagel III. 674), 1537. It is difficult to say what resemblance, beyond a slight one in the stanza, Dr Mitchell can have found here. The Hymn is not even addressed to the 'Holy Ghost' at all. In the second case, Coverdale's *Gloria in excelsis* is probably not independent of the hymn of Hövesch, 'Allein Gott in der Höhe sei ehr'; the

Wittenberg, Nürnberg, Strassburg are all represented in his collection, and by their best writers: Luther, Jonas, Creutziger, Hegenwalt, Speratus; Sachs and Spengler; Dachstein and Greitter<sup>1</sup>. Lower Germany by J. Agricola and probably N. Hövesch. Upper Saxony claims Moibanus, the author of a *Patrem* certainly followed by Coverdale, and probably the anonymous author of another *Patrem*, the original of Coverdale's second 'Pater noster,' published at Erfurt, 1527<sup>2</sup>.

A few examples will show the nature and degree of Coverdale's imitation. Here, for instance, is the first stanza of his version of *Ein feste Burg*. It is intended, like the original, to be sung to Luther's melody, which is printed above the words.

Oure God is a defence and towre  
 A good armour and good weapen,  
 He hath ben ever oure helpe and sucoure  
 In all the troubles that we have ben in.  
 Therefore wyl we never drede  
 For any wonderous dede

High German forms of which first appeared in 1540. The Low German original was however already famous, and had appeared originally in 1526, and repeatedly afterwards (Rostock, 1531, Magdeburg, 1534).

<sup>1</sup> Mitchell would add Symphorian Pollio, on the ground of his Magnificat ('Mein seel erhebt') 1524; but Coverdale's Magnificat is much nearer to the original than to Pollio. He also adds Conrad Huber, Coverdale's friend and correspondent between 1540—8: but the resemblance to his version of Psalm 133 (printed 1545) is of the vaguest.

<sup>2</sup> Mitchell would add Johann Kolross of Basel, on account of his *ad te levavi oculos*. But there is no definite correspondence, and Kolross's version is not known to have been published before 1550. By an apparent misunderstanding of Wackernagel's language, Mitchell states the *Patrem* to be also by Moibanus, for which there is no evidence.

By water or by londe  
 In hilles or the sea-sonde.  
 Our God hath them al i his hond.

Here the first quatrain is tolerably literal, the remainder deserts Luther to follow the psalm. One feels that Coverdale has on the whole been more concerned to adopt Luther's music than his words, and in the other stanzas this is still more clear. He loses too the peculiar refinement of the measure, the mingling of abrupt trochaic and flowing iambic lines; the original can be detected, but is scarcely recalled. I add, further, a specimen of the most elaborately articulated metre in the volume, the *Credo* of Paul Speratus:—

## P. SPERATUS.

In Got | gelaub ich, dz er hat  
 Aus nicht | geschaffen hymn  
 und erden,  
 Kein not | mag mir zu fügen  
 spott,  
 Er sycht | das er mein bschut-  
 zer werde.  
 Zu aller frist | almechtig ist  
 Seingwalt muss man bekennen  
 Läst sych eyn vater nennen.  
 Trotz wer mir thue  
 Der ist mein rwe  
 Todt sund und hel  
 Kein ungefel  
 Widder dysen Gott kan bryng-  
 en  
 O herre Got  
 Vor frewd mein hertz muss  
 auffspringen.

## COVERDALE.

In God I trust | for so I must,  
 He hath made heaven and earth  
 also;  
 My father is he, his chylde am I;  
 My comfort he is, I have no mo:  
 In all my rede, he maketh me  
 spede;  
 His power is with me always,  
 To kepe me every daye.  
 There is no evill can have his  
 wyll,  
 Agaynst my health nor yet my  
 wealth,  
 But it must come to my further-  
 ance.  
 He is my kynge that ruleth all  
 thyng,  
 The devill can make no hynder-  
 aunce.

This is a fair specimen of Coverdale's way of adapting. It is clear that while he displays anything but a servile deference to the meaning, he follows the rhythm of his

original rather closely but with characteristic simplifications. For the rest the correspondence is slight enough. The two 'Credes' are constructed on different lines: Coverdale's in three stanzas, deals successively with the three persons of the Trinity; Speratus', like the Nicene creed, with the successive incidents in the life of Christ.

Finally, we may take an instance from the most famous and beautiful of the Strassburg hymns, Dachstein's version of Psalm 137.

An wasserflüssen Babilon  
 Da sassen wir mit schmerzen,  
 Als wir gedachten an Sion,  
 Da weinten wir von herzen;  
 Wir hingen uff mit schwerem  
     mut  
 Die orglen und die harpffen  
     gut,  
 An yere böum der weyden,  
 Die drinnen sind in irem land;  
 Da musten wir vil schmach  
     und schand  
 Teglich von inen leyden.

At the rivers of Babilon  
 Theresat we downe ryght hevely;  
 Evenwhan wethought upon Sion,  
 We wepte together sorrofully.  
 For we were in soch hevynes,  
 That we forgat al our merynes,  
 And lefte of all oure sporte and  
     playe.  
 On the willye trees that were  
     thereby  
 We hanged up oure harpes truly,  
 And morned sore both nyght and  
     daye.

*Novel  
 metres.*

It will be seen from these examples, among other things, that Coverdale was in some degree a metrical innovator. Unskilful and timid as his imitation is, he still preserves some rude likeness of the original rhythms,—as indeed, since he mostly borrowed their melodies, was inevitable, and many of these if not unknown were certainly unfamiliar in England. The habitual psalm-stanza of the Lutheran poets is that of seven lines of four feet (*ababcc<sup>b</sup><sub>d</sub>*). Seven-line stanzas were in any case rare among the English poets for verse of this length, and when they occur their rhyme is, like that of the 'rime royal,' *ababbcc*. It is more important that Coverdale's treatment of the longer stanza in three divisions is

thoroughly foreign. In England it tended usually to the form in which two symmetrical parts (the *Stollen*) are followed by a third sharply distinguished from them, the *Abgesang*: Coverdale frequently (as in the two latter examples above) substitutes the symmetry of the first and third, with a contrasted passage interposed.

Coverdale was a sincere, fervent, homely man, who wrote what he felt as he felt it; and whose chief merit as a writer of hymns is that his uncouth amble never for an instant recalls the false gallop of Sternhold and Hopkins. The style of such men is rarely very sensitive to new influences, it does not easily take the impression of a different mind and manner. Almost devoid of lyric faculty, his verse limps laboriously after the stirring measures of Luther. His lines never ring. When for a moment he catches an effective rhythm, he seems to owe more to the happy accident which brings the right words together than to any sensitiveness of ear; and the effect is immediately lost in some line of deadly flatness, or one of the prosaic tags of which, like most contemporary English rhymers of the older school, he has an abundant store. *Conclusion.*

One hardly looks then in Coverdale for vivid reproduction of what is most characteristic in his originals. He has not the good translator's sensitiveness and elasticity of style. Yet his very sincerity and simplicity often do the work of refined taste. He is never rhetorical or frigid; he never dresses up a plain phrase or dilutes a strong one. 'Wake up, wake up, ye Christen men!' he cries, with Hans Sachs, and the lusty call of the *Wächter* in the old Daybreak songs to the sleeping lovers rings out in the English as in the German verse<sup>1</sup>.

<sup>1</sup> This is evidently the origin of the 'Wach auf, wach auf,' not infrequent in the opening of Hymns. Cf. e.g. Nicolai's 'Wachet auf

Moreover what was from a literary point of view an accident, led to an extensive adoption of the German metres. Hence it happens that at least the rhythmical peculiarities of German schools of hymn-writing are roughly reproduced in this book of English hymns. For the first and only time, the rich traditions of German lyric poetry produced a faint echo beyond the sea; for the first and only time, the finer sense of melody, the command of striking and piquant effects, the variety of rhythmical movement which were the fruit of a prolonged and often extravagant study of the formal side of verse, were dimly reflected in a literature which, with all its abundance of natural song, had hitherto borne far less considerable traces of the cultivation of lyric art. Had Coverdale been the man to introduce a new school of lyric writing in England, the opportunity and the means were ready to his hand. But he was not the man, and at the very time of his abortive attempt, the two who were had achieved the work in another fashion and yoked English verse for a generation to the car of Petrarch.

ruft uns die Stimme Der wächter,' &c. (Tittmann, No. 23), and Sachs' 'Wach auf meins herzen schöne' (ib. 34).

## TABLE OF COVERDALE'S HYMNS.

I ADD by way of summary a complete table of Coverdale's Hymns, and their established correspondences with the German Kirchenlied. Those marked \* are due to Prof. Mitchell (Acad. 28 June, 1884); several correspondences there suggested by him which seem to me untenable are marked †. The sign = does not imply literal translation, but only some degree of deliberate adaptation, however slight.

### I. Original hymns (or translations direct from Latin).

- †1. 'To the Holy Ghost.' M. suggests Wack. III. 674.
- †22. Magnificat. M. suggests Pollio's 'Meyn seel erhebt,' but C. follows the original far more closely.
- †25. Psalm II. M. suggests Aberlin's 'Ihr heiden was tobt.'
- †34. Psalm XXIV. M. suggests Kolrose's 'Herr ich erhebe mein seel zu dir'; there is no resemblance, and this is not known to have appeared before 1550 (Froschover's Gesangbuch).
- 38. Psalm CXXXIII. M. suggests Huber's 'Nun sieh wie fein' (1545). Huber's version contains four stanzas, Coverdale's only two.
- 41. 'Let go the whore of Babylon.' M. suggests, though doubtfully, a piece (Wack. *ed.* 1840, No. 816) which bears the slightest possible resemblance to it.

### II. Founded upon the German.

#### A. *Wittenberg circle.*

##### (a) Luther.

- \*2. 'Another to the [Holy Ghost]' = 'Komm heiliger geist' (*Erfurt Enchir.* 1524. *Walther'sches Gesangbuch*, 1524).

- \*3. 'Another to the same' = 'Nu bitten wir den heiligen geist' (*Walther'sches Gesangbuch*, 1524).
4. 'Unto the Trinitie' = 'Gott der Vater won uns bey' (W. G. B.).
5. 'The Ten Commandments' = 'Die zehen gebot' (E. E. and W. G. B.).
6. 'Another of the same' = 'Die zehn gebot auff's kurtzte' (W. G. B.).
7. 'The Creede' = 'das deutsche Patrem' (W. G. B.).
11. 'Be glad now all ye Christian men' = 'Nun freut euch lieben christen gmein' (E. E. and W. G. B.).
14. 'Media vita' = 'Mitten wir im leben sind' (E. E. and W. G. B.).
18. 'Of the birth of Christ' = 'Gelobet seist du' (E. E. and W. G. B.).
20. 'Of the resurrection' (2) = 'Christ lag in todes banden' (E. E. and W. G. B.).
- \*23. 'Nunc dimittis' = 'Mit frid und freud' (W. G. B.).
24. Psalm XI. = 'Ach Gott vom himel sieh darein' (E. E. and W. G. B.).
26. Psalm XLVI. = 'Ein feste Burg' (Nürnberg, 1529).
- ?27. Psalm CXXIV. = 'Wär gott nicht bei uns' (W. G. B.).
29. = 'Wol dem der in Gottes' (E. E. and W. G. B.).
33. Psalm CXXIX. = 'aus tiefer not' (W. G. B.).
35. Psalm LXVII. = 'es wolt uns Got genedig sein' (E. E. and W. G. B.).
36. Psalm XIII. = 'es spricht der unweisen mund wol' (E. E. and W. G. B.).
- (β) 'E. Kreuziger.'
13. 'Christ is the only son of God' = 'Herr Christ der eynig gottes son' (W. G. B.).
- (γ) Speratus.
12. 'Now is our health' = 'Es ist das heil' (E. E.).
- \*8. 'Credo' = 'In Gott glaub ich' (E. E.).
- (δ) Erhart Hegenwalt.
32. Psalm L. = 'Erbarm dich mein O herre Got' (W. G. B.).

(ε) Joh. Agricola.

17. 'I call on thee' = 'ich ruff zu dir' (1531).

(ζ) Moibanus(?)

\*9. Pater noster = 'Ach Vater unser' (1526).

(η) Anon.

\*10. Pater noster = 'Vater unser' (Erfurt, 1527). [M. wrongly says 'Moibanus'].

\*40. = 'O Herre Gott' (Erfurt, 1527).

#### B. *Nürnberg.*

(α) Sachs.

16. 'Wake up, wake up' = 'Wach auff in Gottes namen' (Etliche geistliche Lieder, Nürnberg. 1525).

(β) Spengler.

15. 'Through Adam's Fall' = 'Durch Adams Fall' (W. G. B.).

(γ) Anon.

\*30. = 'Wol dem der des Herren' (Nürnberg. *Enchir.* 1527).

#### C. *Strassburg.*

(α) Dachstein, W.

28. Psalm CXXXVII. = 'An Wasserflüssen Babilon' (*Psalmen u. Lieder*, 1530).

(β) Greitter.

31. Psalm LI. = 'O herre Gott begnade mich' (*Teutsch Kirchenampt*, 1525).

#### D. *Low Germany.*

(α) Nicolaus Hövesch (Decius).

\*21. 'Gloria in Excelsis' = 'Allein Gott in der Hohe sei ehr' (Eyn gantz schone nutte ghesanck, 1526)<sup>1</sup>.

<sup>1</sup> G. Milchsack (*Archiv f. Litt. gesch.* 12, 312 ff.) has attempted to show that the first stanza of this hymn is borrowed from the *Primus chorus angelorum* in the Eger Spiel; the resemblance appears to me rather shadowy.

---

\*37. Psalm CXLVI. = 'Hierusalem des loven stadt' (1526).

(β) Anon.

\*39. 'Christe qui lux' = 'Christe du bist licht' (Rigi'sche Kirchenordnung, 1530). (M. wrongly says 'Decius.')

I have not included in the list a hymn founded upon one of the older Easter hymns—familiar in *Faust*:

19. Resurrection = 'Christ ist erstanden.'

## CHAPTER II.

### POLEMICAL DIALOGUES.

THE dialogues of the early sixteenth century are among the classics of modern pamphleteering. Extremely various in form, ranging from the Attic vivacity of Erasmus to the unassuming but admirable prose of Hans Sachs, they presented, at their best, a degree of combined literary distinction and popular persuasiveness to which the Dialogue had not attained since Lucian. Though only in part a direct product of Humanism, there is no better illustration of the characteristic genius of the German Humanists, of the union of literary culture with moral and religious fervour, by which in their hands literature became a fine art without losing hold of church and market-place, and, in acquiring academic refinement, only pressed closer to the heart of national life. *The dialogues of the sixteenth century.*

The history of these remarkable works has never, to my knowledge, been written. They had suffered the fate to which a hybrid *genre* is always liable but which it does not invariably merit, of being neglected by both the classes to whom it partially appeals. Lying between the purely dogmatic treatise, on the one hand, and the professed drama on the other, they have proved too doctrinal for the men of literature, too literary for the men of doctrine. Even in Germany, where the choicest specimens were produced, they have been relatively

neglected; and in England while every vestige of the drama has been laboriously exhumed, the numerous dialogues which slumber on the shelves of Lambeth and the Bodleian have for the most part ministered only to the brief curiosity of the bibliographer. I accordingly make no apology for offering, in the present chapter, not certainly a history of the Dialogue, but some contributions to such a history somewhat more extensive than my immediate subject demanded.

*Mediaeval  
Dialogues.*

The dialogue form had of course been familiar throughout the middle ages, but only in a few conventional applications, and with a very narrow conception of its powers. With rare exceptions it never passed the limits of a single type, that of a simple debate between two opponents—a type kept prominent and alive by several characteristic mediaeval institutions, by the scholastic disputation, the poetic wit-contest, and even by the pseudo-debate of master and scholar in examination and catechism, and finally, by the current interpretation of the word, shown by the spelling *Dyalogus*, as a ‘discussion between two’<sup>1</sup>. Nearly all the professed dialogue literature of the middle ages would in fact fall into one of three groups, between which it is difficult to draw an absolute line, and all following the manner of a disputation. On the one hand there were the purely didactic treatises, of the type of the *Lucidaria*, where the dialogue form is simply a pedagogic device for commending instruction, a graphic way of presenting necessary know-

<sup>1</sup> The same view is of course implied in Wiclif’s neologism for a dialogue of three—*Trialogus*; it is explicitly asserted at the outset of the Renaissance by the German translation of Pope Gregory’s dialogues with his deacon:—‘haisset das buch in latein liber dyalogorum das ist zu teitsch so vil als buch der zwayer red mit ainander.’ Ed. 1473 n. l.

ledge. There is no discussion, no contrast of parts, the conversation is a variety of monologue, a literary *hendiadys*. In the immense class of 'Debates,' on the other hand, we touch the opposite pole of literature. The dialogue form is here essential, and the matter nothing; the effect depends wholly on the dramatic qualities of the situation, on antagonism of character or piquancy of reply. For the most part therefore the speakers were direct antagonists, and, as usual, the most satisfying degree of antagonism was found in pitting against one another personified abstractions or types,—Summer and Winter, Wine and Water, Pride and Lowliness, Body and Soul, Pain and Reason<sup>1</sup>, Owl and Nightingale, Flower and Leaf, Ivy and Holly, etc. The very sharpness and abstractness of their contrasts, however, made the higher dramatic qualities of dialogue difficult to attain; while it encouraged the stiff symmetry of form, the nicely-balanced antithesis of plea and counter-plea, which is most opposed to the free movement of colloquial discussion. Between these, and drawing something from both, lies the polemical dialogue, touching on the one side the didactic treatise, with its charge of serious thought, and on the other the debates, with their genuine discussion, a mediator between the formality of the school and the dramatic vivacity of popular art. It is true that the vivacity never went very far. Very ancient precedent had made the dialogue a favourite method of Christian polemics in almost every age of the Church. The dispute of Justin with the Jew Tryphon was a type

<sup>1</sup> Petrarch's beautiful and original dialogue, translated by Niklas von Wyle under the title *Tröstung in Widerwärtigkeit*, was one of the most familiar to the generation of Germans immediately preceding Erasmus and Hutten. It is reprinted in *Stuttgart Lit. Verein Bibl.* with Wyle's other translations.

on which even more elaborate treatises than his were built. Imaginary opponents array their objections in severely systematic order, and are confuted through chapter after chapter, and book after book. For the most part, though introduced expressly because, as Wiclif puts it, 'locutio ad personam multis plus complacet quam locutio generalis'<sup>1</sup>—for the sake of popular interest,—the debaters are little more than personified attractions—suggestions of personality annexed to antithetic stages of the argument, delivering themselves at the proper moment of their quantum of objection or reply, but almost without a hint of the play of emotion and character, the enthusiastic *entrain*, the ironical humility, which humanise the dialectic of the great master of polemical dialogue<sup>2</sup>.

Erasmus  
and  
Hutten.

From these limitations the polemical dialogue was first decisively released, in northern Europe, by two

<sup>1</sup> *Trialogus*, Prol.

<sup>2</sup> To refer only to books which in some sort coloured English tradition, Wiclif's *Trialogus*, where Alithia, Pseustis and Phronesis are the names of three intellectual figments, of whom the first always maintains, the second objects, and the third decides. In Henry Parker's long and elaborate *Dives et Pauper*, the two speakers are shadowy types of wealth and poverty, and their argument follows a pedantically elaborate scheme, one book being devoted to each of the Ten Commandments. The *Dives et Pauper* was printed by Berthelet in 1536. Even in Ockham's little dialogue *Clericus et Miles*, better known in Germany than in England till far on in the sixteenth century, the close reasoning is scarcely relieved by one dramatic touch. This interesting dialogue may, at the same time, well have had more literary influence upon the German dialogues of the Reformation than has been hitherto allowed it. The early editions of it printed in Germany are very numerous. A South-German dialogue '*zwischen ainem Priester unn Ritter von ainer steuer über die gaistlichen etwan in Franckreich angelegt, gehalten*' (Goedeke, § 140, No. 53) is, I presume, a translation of it. It was translated into English about 1550.

men: Erasmus and Hutten. From the somewhat confined, scholastic air in which it had hitherto breathed, they brought it into the stir of public life; they substituted at the same time the easy informal movement of classic dialogue for the pedantic symmetry which had habitually regulated the arrangement of the speeches or of the topics: they replaced the shadowy and abstract types by real figures drawn not seldom with the pencil of Holbein, and of every grade of society; and lastly, they called into the service of serious polemics, hitherto waged mostly with heavy bludgeons, the rapier point of the refined satirist, now in airy raillery, and now in the scathing and implacable laughter of Aristophanes and Lucian, which as little resembles the merriment of the carnival as the seriousness of the pulpit.

Erasmus, the riper scholar of the two, understood the capacities of his instrument probably better than Hutten; his dialogues have a wider range of subject and produce their effect with less obtrusive directness of expression; graphic pictures of social life, as in the *Deversoria*; serious and meditative discussions of literature and theology, as in the *Convivia*; satires, now explicit, now veiled and ironical, upon the abuses of the day,—the ignorant monks, the alchemists, the beggars. Hutten's method is less leisurely, less elaborately witty, less 'familiar', less penetrated with the refined indolence of the scholar; the polemical aim is more obtrusive, the style more muscular, vehement, full-blooded. He carries on the war begun in the *Epistolae Obscurorum Virorum*, against the monks, the corruptions of the Church, the venality of the Roman court, the unscrupulous cunning of the 'pale, passionate Italian,' the gross manners of the guileless Teuton. He loves, like his model Lucian, to play with mythology, and to put his satire in the mouths of gods

and heroes. He makes Phalaris rise from the dead to give counsel to his disciple the duke of Würtemberg, and the Sun discourse with Phaethon on the character of the German people<sup>1</sup>. He revels in a Shelleyan vastness of contour and proportion, and paints with broad and careless sweeps of the brush. He knows as little of the confined scenery of *genre* painting as of its minute touch. His characters move about on a vast open-air stage, and the impression is somehow conveyed that the entire universe is looking on. The Titanic energy of his own nature begot a boyish delight in Titanic imagery, as Erasmus' infirmities made him prefer as an artist the scenery in which he most congenially moved,—the refined interior, the scholarly banquet, the subtle jest over the good wine. Erasmus, even when directly dealing in satire, struck at individual foes only under the effigy of general types: Hutten, with a fearless audacity which his friends often reprov'd, attacked the general type in the guise of the individual enemy, and founded the literature of personal invective in which the Reformation was so profuse and at times so great. His victim, the new 'Phalaris,' Ulrich of Würtemberg, is the precursor of Luther's victim, 'arger Heinz' of Brunswick.

German  
Dialogues,  
1521—

The series of Hutten's dialogues opened in 1517 with the *Phalarismus*. In 1521 it closed with the *Bulla*, the *Monitor* and the *Praedones*. But his example had already begun to inspire before it was withdrawn. The year in which the last appeared is marked by a host of dialogues from other hands. For the next five years the torrent of production flowed steadily without a check, and intermittently for at least another generation<sup>2</sup>.

<sup>1</sup> *Inspicientes*, 1520.

<sup>2</sup> Comparatively few of these are as yet collected. O. Schade, *Pasquillen u. Satiren aus der Reformationszeit* contains several;

As a whole they cannot be described as directly Humanist productions. They rather testify to the extraordinary vitality which mediaeval tradition retained in the palmy days of Humanism. In the majority the outlines of the mediaeval 'dialogus' are clearly perceptible. But they tend to break away from this model in three directions, which may be concisely summarised as picturesque scenery, range of character, and dramatic action. One small but brilliant group of dialogues follows directly in the path of Hutten; the debate, lively and piquant in itself, owes half its effect to the imaginary background on which it is thrown. An *Apologia* for the life of Franz von Sickingen is conveyed in a spirited debate at the gate of heaven between St Peter and the 'old soldier come for his pay,' and clinched by his triumphant entrance<sup>1</sup>; while the embarrassments of departed enemies in the same circumstances furnished the motive for the scathing dialogues upon 'Heinz' of Brunswick<sup>2</sup>,—a sixteenth-century way of 'adding a new terror to death,' which Byron borrowed three centuries later to pillory the still living Southey<sup>3</sup>.

but for the most part I have used the original editions in the British Museum specified below. Uhland, in his Tübingen lectures (*Schriften*, ed. Holland II. 499 ff.), notices several in a rather perfunctory manner.

<sup>1</sup> *Dialogus von Franz von Sickingen vor des Himels Pforten mit S. Peter...gehalten* (O. Schade, *Pasquillen der Reformationszeit*, II.).

<sup>2</sup> 1541. This, which in scale and pretensions is a small tragedy in three acts, is printed with several other dialogues on 'Lycaon' in Schade *u. s.*

<sup>3</sup> These are an insignificant portion of the extraordinarily rich *Himmel-pforte* literature. The somewhat similar dialogue on Julius II. (*Quomodo Julius II. papa post-mortem coeli pulsando ab janitore illo S. Petro intronitti nequiverit*), once attributed to

In a much larger number no attempt is made at imaginative colouring of this sort. They are meant for solid and fruitful discussion, and the scenery, such as it is, apparently serves merely to provide it with a starting-point. Nothing can be simpler than the action becomes where this point of view prevails. The problem is reduced to that of bringing the adversary into a situation in which he will consent to discussion instead of abuse or retreat. But this meagreness of scenery is atoned for by a remarkable freedom in the choice of characters; who moreover are no longer abstract types but real persons. All classes of society are represented. Not merely the 'rich' and the 'poor,' the priest and knight, the 'Lutheran' and 'Catholic,' but peasants, scholars, nobles, monks, clerks, courtiers, beggars, fools, pedlars, innkeepers, weavers, tailors, Wurst-buben, women and children, young and old, pious and froward, pass across the stage; and though deliberate character drawing was an art quite outside the scope of these writers, yet many graphic traits escape as it were incidentally from their pens. The champion of Reform is commonly a peasant, an artizan, a citizen, a schoolmaster; that of the Church most often a priest or monk. A priest and a *Schultheiss* meet in a tavern<sup>1</sup>; a peasant at work in his garden sees his priest pass by and questions him 'ettlicher Artikel halben'<sup>2</sup>; a shoemaker, bringing a pair of shoes home to

Hutten, was probably not of German authorship. Unlike the German dialogues it became at once a European classic, was translated into French and English as well as into German, and was quite familiar to well-read Englishmen in the middle of the century. It is alluded to, for example, by Turner, *Examination of the Hunter*, and by Bale, *Catalogus &c.*, sub nom. *Julius II.*

<sup>1</sup> *Ein schöner Dialogus*, &c. 1521 (B. Mus.).

<sup>2</sup> *Ein schön Frag...&c.* by Veltin Sendler (B. Mus.).

his precentor, is drawn into theological disputation<sup>1</sup>; a weaver and a priest fall in together on the road towards Augsburg, and engage in amicable altercation<sup>2</sup>; a monk lies starving at the roadside, because the old supply of wine and cheese once so willingly given by the peasantry is now cut off, a peasant passing by takes pity on him, brings him to his house, seats him at his table and seasons breakfast with the inevitable argument<sup>3</sup>. The tone of the dispute is by no means always bitter: it ranges from the fiercest railing to friendly and even genial argument. At times even the form of *disputation* is wholly lost: two Protestant peasants, for instance, meet and discuss the last Reformation news, or criticise with erudition *μελέων ἡ κατ' ἀγροίκους* the last production of Erasmus<sup>4</sup>.

In a third group, finally, this simplicity of structure wholly disappears. A more ambitious art, or perhaps a more limited faith in the persuasiveness of arbitrary argument, carried the *Gespräch* into a higher stage. The canvass was extended, famous men were introduced, subordinate figures appeared in the background; and with the extension of the *personnel*, the action naturally grew more complex and fell into more or less detached scenes. We find in short the dialogue turning into what is perhaps best called the *drama of debate*. The Swiss taste for a crowded stage was partly responsible for the notable dialogues of the Zurich pastor Utz Eckstein and his more gifted contemporary in Berne, the poet painter, Niklas Manuel; the *Concilium*<sup>5</sup>, where a

<sup>1</sup> *Disputation zwischen ainem Chorherren u. Schuchmacher*, &c. by Hans Sachs, 1524.

<sup>2</sup> *Ain hübsch Gesprächbüchlein*, &c. by Utz Rychsner, Weber, 1524.

<sup>3</sup> *Ain schöner Dialogus wie ein bawr mit ain...münch redt*, &c. (B. Mus.).

<sup>4</sup> 'Cünz und der Fritz, die brauchent wenig witz' (B. Mus.).

<sup>5</sup> *Concilium. Hie in dem buch wirt disputirt Das puren lang zyt hat verfür*t, &c....(B. Mus.).

body of champions from the two ecclesiastical parties hold a formal discussion; the *Rychstag*<sup>1</sup>, where the peasants' delegate in the same way pleads their case with the nobles; and the most interesting of all, Manuel's *Barbali*<sup>2</sup>, where a young girl, whom her mother desires to place in a nunnery, convinces herself by prolonged midnight study of a gospel, bought with her earnings, that the Apostles knew nothing of nunneries, and not only resists her mother's pressure, but holds her ground victoriously against the combined resources of the local clergy. Either the *Rychstag* or the *Barbali* might be divided into at least five distinct scenes, covering in the latter case more than a year of time<sup>3</sup>. A somewhat less elaborate example of the same type is the dialogue called *Maria*<sup>4</sup>, certainly among the earliest of the Protestant dialogues. A Pfarrer of Lutheran sympathies devotes a sermon to a castigation, under well-chosen figures of speech, of the monks; a 'Monk' in the audience resents his freedom, but an 'Old woman'

<sup>1</sup> *Rychstag der Edlen und Pauren bricht und Klag*, &c....(B. Mus.).

<sup>2</sup> *Barbali. Ein Gespräch. Kurtzweylig wie ein muoter wolt Daz ir tochter in ein kloster solt*...(B. Mus.). Reprinted with notes in Baechthold's admirable edition of Manuel.

<sup>3</sup> To show more clearly how far such dialogues as this approach drama, and how far they fall short of it, I add a brief analysis. Scene 1. Barbali and Mother. The latter complains of their want, and urges B. to enter a nunnery. B. begs for a year's grace, that she may have leisure to buy and examine a New Testament. 2. After the year is over, the mother renews her appeal, but B. having found no biblical authority, refuses more firmly than before. 3. Mother consults Herr Hiltprand Stulgang, pfarrer zu Bild. He severely blames her for suffering B. to look at the N.T. 4. Dispute between B. and Stulgang. 5. S.'s failing forces are supplemented by a company of allies, who after a long argument are likewise ignominiously beaten.

<sup>4</sup> *Eyn schöner Dialogus von den vier grosten beschwernuss eins jeglichen Pfarrers*...(B. Mus.).

(*Vetula*) applauds, and a young nobleman, led by the persuasive conversations of the Pfarrer, warmly takes his side. The Monk appeals to his superiors, but the Pfarrer after examination by the 'Vicarius' is acquitted in triumph, and the Monk dismissed in ignominy.

The masterpiece of these semidramatic 'dialogues' is however the *Drei lustige Gespräche* already mentioned in another connexion; where Henry of Brunswick comes to take his trial before his old ally Pluto, in an under-world drama, the scenery in which is drawn essentially from the Vergilian Hades, borrowing at certain points, however, a more lurid colouring from the Christian Hell. A crowd of figures pass before us, distinguished with no contemptible art: the Furies Megaera and Tisiphone, the ferryman Charon, the judges Minos and Rhadamanthus, the would-be merciful Pluto, the implacable and indignant 'Genius' who descends from heaven to be the representative of God and Protestantism; lastly the duke himself, of stature tall, splendidly habited, eloquent, but of deadly pallor and 'cheeks that droop like a blood-hound's.' The trial is carried out and sentence pronounced with all ceremony, and the duke, who had arrived elate in the confidence that the powers of darkness whom he had served would not desert him in his need, is dragged away to his unexpected doom,—a genuine tragic motive handled with at least the elements of tragic power.

No such epoch of prolific and feverish production marks the annals of Dialogue in England. It was not here the chosen vehicle for half a decade of some of the fiercest class and sect hatred and not a little of the most drastic satire known to history. Good and even brilliant examples are certainly scattered through the literature of the century, but they occur at intervals, in isolation, and clearly for the most part owe their peculi-

*The Dialogue in England.*

arities of form at least as much to deliberate or even arbitrary choice, as to the contagion of any literary vogue. They present indeed a variety almost beyond classification. They range from the Ciceronian type, in which the form of dialogue is merely a device to facilitate monologue, a group which includes, for instance, both the *Utopia* and the *Toxophilus*<sup>1</sup>—to little dramas alive with many-sided character and picturesque scenery, like the masterly *Dialogue* of William Bullen<sup>2</sup>. Prescriptions of health, spiritual as well as physical, were still conveyed by the time-honoured method of question and answer<sup>3</sup>. John Heywood still represented for England, as Hans Sachs did for mediaeval Germany, the mediaeval disputation of abstractions<sup>4</sup>, though, if it is rightly assigned to him, he also produced a more characteristic piece of genuine human conversation in the *Gentylnes*

<sup>1</sup> Though it contains much serious debate, W. Starkey's elaborate dialogue between Cardinal Pole and Lupset, Professor of Law at Oxford (ed. Herrtage and Cowper, E. E. T. S.), belongs to this type. It is a *quaestio* rather than a debate, a formal inquiry into the conditions of a sound polity.

<sup>2</sup> A distinguished namesake and descendant of his to whose learning and critical acuteness the dramatists of the century already owe not a little, has recently undertaken an edition of this *chef-d'œuvre* of one who, without serious error, might be classed among them.

<sup>3</sup> W. Bullen, e.g., also wrote *Dialogues on Physic*.

<sup>4</sup> *Dialogue of Wit and Folly*. This mediaeval *genre* lingered throughout the greater part of the century both in England and Germany, especially in the ballad form. Cf. Thynne's 'Disputation between Pride and Lowliness,' and a number of lost ballads recorded in the Stationers' Register: 'Dialogue between Age and Youth,' 'God and Man' (1568), 'Death and Youth' (1563). One of the favourite *Volkslieder* of the century in Germany was the Debate of the *Buchsbaum und Felbinger*. In Shakspeare, *L. L. L.* v. 2, it will be remembered, the 'owl and cuckoo' still 'represent summer and winter.' Milton's *Allegro* and *Penuseroso* may be regarded as the apotheosis of these *contrasti*.

and Nobility, where a Merchant, a Knight and a Plowman dispute 'Who is a very gentleman?' And finally there is, as in Germany, the *polemical* dialogue proper, ranging from the tedious and undramatic discourses of Ochino's 'tragedy<sup>1</sup>,' to the impassioned and eloquent debate of Spenser's Eudoxus and Irenaeus, the stirring rhymes of Roy and Barlow's *Rede me and be not wroth*, and of John Bon, and the vigorous prose of William Turner's *Examination of the Mass*<sup>2</sup>. It is a portion of this last class that I propose to examine somewhat more closely. The inquiry is practically confined to two comparatively short periods: the first outbreak of English Protestantism under Henry, and its brief triumph under Edward.

## I.

The storm of Protestant dialogues which had swept over Germany was perceptibly waning when the beginnings of the English Reformation brought a new kingdom within its range. Tyndale landed at Hamburg in 1524; William Roy and Jerome Barlow, formerly Franciscans at Greenwich, made their escape up the Rhine, the one

Roy,  
Barlow,  
Tyndale.

<sup>1</sup> 'A tragedye or dialoge of the unjust usurped primacie of the bishop of Rome. Dedicated to Edw. VI.' More celebrated are the 'thirty dialogues' written after he left England, the 21st of which, on polygamy, caused his expulsion from Zurich, 1563. He also translated a German dialogue, 'Gesprech der flaischlichen Vernunft.'

<sup>2</sup> It is remarkable that Lucian, though his example was so fruitful among a people whose possession of *esprit* was one day to be the subject of a classical inquiry, should have been entirely neglected among the English writers of original dialogue. Erasmus had long ago translated the *Icaromenippus* (1512), and Bullock, in the year of Hutten's final efforts (1521), the *περὶ Διψάδων*; while More, according to Bale, rendered three of the dialogues. The fragment described by Collier (II. 280), and mistaken by him for a scene from a modern Latin play, is a translation of the *Nekyomantia*.

probably in 1525, the other in 1527. These three men led the first assault against Wolsey and English Catholicism, and a considerable portion of their polemic took the form of Dialogues. The most important of these is the *Rede me and be not wroth*, or 'The Burial of the Mass,' the work of Roy and Barlow at Strassburg<sup>1</sup>. Roy himself further translated a Latin dialogue on the Mass, at Strassburg; and a third dialogue, that 'between a Gentleman and a Husbandman,' issued from Tyndale's circle at Marburg<sup>2</sup>.

I.  
*Rede me  
and be not  
wrothe,*  
1527-28.

The work of Roy and Barlow was certainly produced between the spring of 1527 and that of 1528<sup>3</sup>. It was apparently their joint work: Roy supplying probably the original suggestion and the leading motive; Barlow filling in the outline with details, and doing the whole of the composition<sup>4</sup>.

The plot is simple and effective, though carried out at immoderate length. The Mass is dead. His enemies

<sup>1</sup> This has been well edited by Prof. Arber in his *English Reprints*. His concise but full introduction was the starting-point of the following pages, and any further result they may render probable is thus in a measure indirectly due to him.

<sup>2</sup> MS. Cotton. Cleop. E IV. f. 121 contains a letter from Barlow to the King asking pardon for his Lutheran works, among which he further mentions a Dialogue 'inveying specially against St Thomas of Canterbury, which as yet was never prynted nor published openly.'

<sup>3</sup> See Tyndale's statement in the preface to his *Mammon* (quoted by Arber, p. 11), according to which Barlow did not reach Strassburg before the former date; and More's statement in the *Supplication of Soulys*, 1529 (ib. p. 12), that the dialogue was published before the *Mammon* itself appeared in May, 1528.

<sup>4</sup> Tyndale says (*u. s.*) 'W. Roy, whose tong is able not only to make foles sterke madde, but to disceyve the wisest that is....., gat him to him and sett hym a werke to make rymes.' Mr Arber interprets this as assigning 'to Barlow the expression and to Roy the matter.'

at Strassburg have violently fallen upon him and slain him. The scene opens with a long lyrical lamentation by a priest<sup>1</sup> for the decease of this all-powerful patron, the source of luxury, 'the chief upholder of our liberty.' He bitterly enumerates all the blessings which the Mass has brought his order, and which end with its death.

The masse made us lordis and kyngis over all,  
 Farre and nere every wheare havynge power.  
 With honorable tytles they dyd us call,  
 Dredynge to offende us at eny houre.  
 Then were we as fressh as the garden floure.  
 Under favoure of the masse,  
 Now deceased, alas alas.

The masse made us so stronge and stordy,  
 That against hell gates we did prevayle.

.....  
 O faythfull masse, so constant and true,  
 In heven and erth continually.  
 We now thy chyldren shall morne and rue  
 The chaunce of thy dekaye so sodenly.  
 Constrayned we are all to wepe and crye.  
 Seynge that gone is the masse,  
 Now deceased, alas alas.

Hereupon the two servants of the priest, Jeffrey and Watkyn, enter into discussion over the new tidings. Watkyn, like Roy, is already at home in German affairs, Jeffrey, like Barlow, is more familiar with recent events in England. Watkyn describes to his fellow-servant the

<sup>1</sup> Mr Arber says 'a *Strassburg* priest.' There is nothing to show this; and the words to which he appeals rather indicate that the scene is *not* at Strassburg. 'I wolde heare mervelously fayne' (observes Jeffrey) 'in what place the masse deceased.' 'In Strasbrugh,' replies Watkyn, 'that noble towne, A cyte of most famous renowne, wheare the gospell is frely preached:'—scarcely a natural expression if the speakers were actually at Strassburg. But it is perhaps rash to press the language of so inartificial a production as this.

last stages in the career of the fallen Mass, and the cause of his death. He had not died of age, but his enemies, Butzer, Hedio, Capito, Symphorian<sup>1</sup>, had fallen on him with 'a sharpe two-edged sword,'—the gospel,—and in spite of Emser, Faber, Eck, Cochlaeus, and the Universities of Löwen and Köln, had slain him. Jeffrey hears with amazement of this audacity, of which no one in England had yet dreamed. The Mass being dead, where, they next ask, should he be buried? In Rome, the head see of Christendom, or in Paris, where he had received so much favour, or finally in England? Jeffrey suggests that he could not have a better burial place than the gorgeous shrine of S. Thomas at Canterbury. But the difficulties would be great, for in England the strong are on the side of the Mass, nay they have just caused his great rival, the gospel, to be publicly burned in London city. This opens the way to a long, trenchant, scathing satire upon the clerical party in England, and above all the arch-champion Wolsey is assailed with all the gross ribaldry of the time. This satirical declamation occupies the great bulk of the dialogue; indeed it is so sustained that the principal speaker, who is now Jeffrey, finding himself 'marvelously drye,' proposes to adjourn for dinner; after which eminently English interruption it is resumed with unabated zest.

The whole dialogue is then substantially a vigorous satire upon English affairs, in a framework,—the death of the Mass,—suggested by recent events in Germany. Only a man fresh from England could have supplied the former element; only one familiar with Germany the

<sup>1</sup> Mr Arber in his preface (p. 4) goes out of his way to suggest that by this 'Symphorian' the Lyonnais poet Symphorien Champier is probably *not* intended. The allusion is of course to the Strassburg Pfarrer, Meister Ziprian (Symphorianus Pollio).

latter. It appears just then to conclude that the former was the work of Barlow, who had just joined Roy at Strassburg, and that the framework or leading motive was supplied by Roy himself, who however, to judge from Tyndale's words, left to Barlow the whole execution.

For our present purpose the English element of the dialogue may be dismissed. The German element requires however to be more closely examined. Mr Arber points out an obvious difficulty in the interpretation of the 'death of the Mass'. 'In what place,' it is asked, 'did the Mass decease?' 'In Strasburgh,' is the reply; 'that noble towne...where the gospell is frely preached': and the chief agents in its fall are 'Hedius, Butzer and Capito, Celarius Symphorian,'—every one of them Strassburg men. Yet the Mass was not actually abolished in Strassburg until Jan. 1529<sup>1</sup>, some months after the dialogue was printed.

Mr Arber has attempted to solve this *prima facie* difficulty in two ways. He points out that though the 'decease' is explicitly localised at Strassburg, yet various events are touched,—such as Erasmus' *de libero arbitrio* (p. 42), and the efforts of Löwen and Köln Universities (p. 43), which had no peculiar connexion with the Strassburg Reformation. 'So that this part of the Inveective is but a dramatised representation of the Reformation struggle in Germany, and especially during the two years 1526-8 that Roy was in the country<sup>2</sup>.'

He proceeds, secondly, to connect the dialogue immediately with the great and successful disputation at Bern in Jan. 1528, which was instantly followed by the

<sup>1</sup> Cf. Roehrich, *Gesch. d. Reformation in Elsass*, Pt. II. Chap. XI. and Lorenz u. Scherer, *Geschichte des Elssasses*. Baum, *Capito und Butzer*, has not been accessible to me.

<sup>2</sup> Arber, *Introduct.* p. 6.

'decease' of the Mass in Bern, Constanx and Geneva,—a disputation in which the Strassburg leaders Butzer and Capito took part<sup>1</sup>.

Without dissenting from this combination, it is still not perfectly clear why Roy chose to localise the actual decease of the Mass at Strassburg. The truth is that though the Mass was not officially abolished there before Jan. 1529, it had long before then ceased to be the Mass known to the Roman church. The civic act of 8 Jan. did not strike down a healthy and vigorous growth, but merely ended an existence from which all character and meaning had already vanished. It was the closing process of a gradual and prolonged dissolution. So early as 1524, a series of reforms or alterations had begun, which sapped one by one the most vital characteristics of the Mass. First the use of Latin was replaced by that of German<sup>2</sup>; then the elevation of the host was discontinued<sup>2</sup>, and the dress of the officiating priest altered from the imposing surplice to a simple black robe. The peculiar gestures and attitudes customary at the celebration were next stopped<sup>2</sup>. And already in 1526 it was possible for a Flugschrift writer to speak of the Mass as 'dying out'<sup>3</sup>.

Finally, in the first days of 1528 came the conference of Bern. The close alliance of Strassburg with the Swiss, and their agreement, against nearly all the rest of Germany, upon the question of the Eucharist, made this conference as momentous for Strassburg as for the Bernese themselves. Butzer and Capito stood side by side with Zwingli and Oecolampadius, bore the brunt of the battle

<sup>1</sup> Cf. Roehrich, *u. s.*

<sup>2</sup> Roehrich, *Geschichte der Reformationen in Elsass.*

<sup>3</sup> *Neuwe Zeitungen von den absterbenden Messen*, quoted by Roehrich.

and shared the victory. The Catholics were nonsuited in default of appearance; the conclusive triumph was a triumph not less for Strassburg than for Bern. As they returned home to Alsace they may well have felt that the struggle was over at Strassburg also; that the terrible blow which the Catholic champions Eck, Faber and Murner had inflicted on their own cause by not appearing in its defence would tell far beyond the immediate neighbourhood of Bern, and above all in Alsace, the stronghold of the Swiss faith in Germany. To a Strassburg writer the collapse of the Mass in Switzerland under the strokes of the Strassburg leaders, must have seemed the final stage of the gradual disintegration all but accomplished in his own city; and but a small stretch of civic patriotism was needed to localise that last stage also in the city which had in any case taken an even share in effecting it.

It was not then unnatural that Roy should make his Mass 'decease' in Strassburg. But whence had he this notion of a 'dying' Mass? or was he the first to adopt this satirical personification of the essence of Catholic ritual, and to describe its 'death'? There is no doubt on the contrary that in this felicitous idea Roy borrowed a genuine and characteristic piece of German humour. Personification was the keenest literary instinct of the day. Erasmus, and in a measure Brandt also, personify folly; Eberlin von Günzberg personifies the 'fifteen arguments of Lutheranism'; and Thomas Murner in the *Grosse Lutherische Narr* achieved a master stroke by personifying Lutheranism itself<sup>1</sup>. The title of the *Neuwe Zeitungen* quoted above shows

<sup>1</sup> He carefully explains in the preface that the 'great Lutheran Fool' is not Luther but his party;—a Murnerian version of Porson's satire on 'all Germans but Herman,—and Herman 's a German.'

how near at hand lay the idea of personifying the Mass, two years before Roy's dialogue. It is far more important that just before he wrote there appeared in Switzerland a prose dialogue in which the Mass was not only personified with extreme vividness and humour, but represented, in close analogy to Roy's conception, as struck down with mortal illness, and making her last will. Written by an eminent Bernese, and produced a few days after the close of the disputation, there is no doubt whatever of its meaning; it is the triumphant cry of Swiss Protestantism over the fall of the Mass in Switzerland. From the 'deadly sickness' of the Mass to her 'decease' is no very difficult transition; but before I suggest the precise relation of this dialogue to Roy it will be worth while to spend a few words upon it.

Manuel:  
*Die krank-*  
*heit der*  
*Messe.*

The dialogue on the 'Sickness of the Mass' was almost the last work of the notable Bernese poet, already mentioned, Niclaus Manuel<sup>1</sup>. It is incomparably superior as a piece of literature to the English dialogue of several times its bulk; indeed its last editors hardly go too far in placing it at the head of the whole literature of the vernacular controversial dialogue of this period<sup>2</sup>. To most writers the dialogue form was merely a handle for effective controversy, in the absence of a real disputation it was some satisfaction to create an imaginary one, and maul or convert in effigy an opponent inaccessible

<sup>1</sup> Cf. the excellent reprint of his works, with memoir, in Baechtold and Vetter's *Bibliothek älterer Schriftwerke der deutschen Schweiz*, Bd. II. The dialogue is printed at p. 216 ff. ('Ein klegliche Botschafft dem Papst zü komen,' &c).

<sup>2</sup> It would however have some severe competitors; e.g. the *Novella*, attributed to Gengenbach, and the best of the dialogues against Heinrich of Brunswick.

either to violence or to persuasion in his own person. A few ironical compliments introduced the conversation: once opened, however, all irony, all delicate literary artifice was forgotten, and the writer plied his controversial hammer without a second thought. With Manuel how different it is! Painter as he was, the artist's sense preserves him from sinking into mere polemics; from beginning to end the essential irony, the picturesque and piquant phrase, never flag: the whole is a little drama full of life and light, not a controversial tract.

The first speakers are the Pope and the Cardinal. The latter enters in haste with bad news. 'Most holy father, I have a letter from Germany, and nothing more horrible and shocking ever came to my ears. Talk of the destruction of Jerusalem!'

*Pope.* What is it? Concerneth it the whole world, or the high? or the low?

*Card.* It concerneth the very best and mightiest, the rock on which the whole priesthood is built.

*Pope.* Now in God's name! it is the Mass. The bow has long been strung; let it once be loosed and we are all shot.

They deliberate anxiously on means of relief. The Cardinal is despondent, and points out the futility of all the remedies successively suggested by the Pope. 'We have a contrary wind, and all our oars are broken.' The Pope proposes to call out all the strong and doughty men to the rescue. 'In vain,' returns the Cardinal; 'we have already hired at great cost Hans Strokehisbeard and Claus Curseill, and others, but they might as well have shot at the rainbow; and the poor Mass, seeing her allies all falling off, fell deadly ill, and there is now little hope of her life.' 'Could we not try the waters?' suggests the well-meaning Pope. As a last resort the experiment is made. The Mass is put into the bath, and the

famous doctors Rundegk (Eck) and Heicho (Faber)<sup>1</sup> feel her pulse. 'Herr bis [sei, *imper.*] gelobt! die Mess facht an schwitzen, ich hoff es wöl besser umb sie werden.' But alas, it is the 'death-sweat,' and the 'improvement' of the Mass is that of a twenty-year horse, or of corn under hail. Eck then opportunely reminds the company of the young lion which, born dead, was brought to life by its father's roar; and proposes to revive the Mass by a roar in concert. The Catholic champions agree to this method of supporting the cause and roar lustily. But the longer they cry the weaker grows the Mass; her eyes sink, her complexion is as dough, her nose, like the dying Falstaff's, grows 'sharp and pointed.' Eck proposes to warm her chill limbs by the fire of purgatory; but alas, the peasants have put it out with the holy water, and monks and beggars are sitting there in the smoke with streaming eyes. Faber calls for the holy oil to perform the last unction; but it appears that the sacristan has used it to grease the boots of the *capellan*. At length all hope vanishes. 'We might as well try to hang the sea on a rainbow, like a sausage on a hook, as help this Mass.' And he proposes that they shall all ride off home, keep a cheerful countenance, and if any should ask, 'How is it with Mass?' answer, 'Wol, wol, marter liden wol! By the torments of all the martyrs she is in the best of health, and had a dance last night with the Pope's legate!'

The *Krankheit der Messe* is fitly followed by the last Testament of the Mass, 'of her,' as it is affectingly put, 'who has suckled, nourished and protected the entire priesthood as a mother her child.' She arranges for the disposal of her body and property, and for the order of the funeral. One other touch of Manuel's pungent wit may

<sup>1</sup> Baechtold and Vetter; *u. s. Introduction*.

be quoted, though it is too elaborate to be quite happy. 'My body,' writes the Mass, 'shall be buried under the eyes of the whole priesthood, and you shall drop holy water on the grave the whole time, for then their tears will be sincere.'

This effective satire became immediately popular, and was repeatedly reprinted and adapted<sup>1</sup>. At Strassburg, bound by so many links to Switzerland, where every movement of the Swiss Protestants found an instant echo, the report of it must have followed its production as rapidly as that had followed the collapse of the Bern disputation. That Roy had yet seen the *Klegliche Botschafft* is scarcely credible in face of the inferiority of his own work; possibly he could not have read it if he had seen it. But the idea of the personified Mass falling sick, abused by her foes, vainly succoured by her friends, and finally lying at the point of death, was one of those which in a country thrilling with excited hopes and fears at that very prospect, penetrates and is passed from mouth to mouth with incredible rapidity. In Strassburg it must have been current talk at the moment when Roy conceived the thought of his dialogue. As the most effective handle within reach for the elaborate assault upon the English clergy which he contemplated, he seized upon it—and then came the complaisant and industrious Barlow to give form to his conception<sup>2</sup>.

<sup>1</sup> Cf. titles, including a *Bearbeitung* in Low German, in Goedeke, p. 301.

<sup>2</sup> I do not dwell on particular passages, which however here and there bear a curious resemblance. Of the bishop of Strassburg we are told:

He spareth not to course and banne,  
Doynge all that ever he canne  
To revoke masse unto lyfe agayne.

2.

*Dialogus  
inter  
patrem  
christia-  
num et  
filium  
contuma-  
cem.* 1528.

Of the other two dialogues produced in Germany nearly at the same time little need be said. The 'dialogus christianus' between a 'pater christianus' and a 'filius contumax' remains neither in the original, of which no other notice appears to be extant, nor in the translation of it undertaken, according to Tyndale, by Roy. Considering the ideas with which Roy was preoccupied at the time, we have no difficulty in believing More's assertion (*Supplicacyon of soulys*, quoted by Arber, *u. s. p.* 12) that it dealt with the sacraments. Much more remarkable and curious is the *personnel* of the dialogue. The speakers are father and son—so far there is nothing unfamiliar; what is I believe unexampled is their respective *rôles*. The genius of the Protestant dialogue tended to put the defence of the new teaching in the mouth of the younger, of the poorer man, while the elder, or the more powerful, or the superior in social ranks defended tradition<sup>1</sup>. Here however, unless the title is delusive, the Christian, i.e. Reformed, doctrines are urged by the father, and the obstinate opponent is the son. In the absence of the text it would be idle to dwell further on the anomaly.

And of Faber and Eck, Enser and Murner here as in Manuel, the chief protectors of the Mass,—it is asked:

'Did they unto masse no socoure?—

Yes truly, with wordes of greate boste,

They spared not to sende their oste,

Threatnyng with fearefull terroure,'

though, as the speaker proceeds to explain, they were not present, i.e. at the Bern disputation.

<sup>1</sup> As regards the father and son *motive* cf. e.g. the 'Bruderliche Warnung an M. Mathis Zell...' by Stephan Bullheym (extracts in Roehrich's *Mittheilungen* III. 94 ff.), where the cause of Zell and Reform is represented by Stephan against his father. Cf. the *Robin Conscience* in England.

An anomaly of a different kind would belong to the third dialogue in question, had it been written for a German audience or of a German society. The 'proper Dyaloge betwene a Gentillman and a Husbandman'<sup>1</sup> is a 'bitter cry' of two oppressed orders against the spirituality. There is little question here of religious beliefs, little allusion to the Mass or the sacraments, or purgatory. On the other hand the social root of the English Reformation is laid bare with great clearness and some force. In this respect the dialogue is a continuation of the epoch-making *Supplication of the Beggars*, 1527<sup>2</sup>. It has little of the intellectual equipment of that satire, of the statistics and dialectic which forced it home; it impresses solely by the simple pathos of personal suffering. Its heroes are not merely political spokesmen for oppressed classes, but foremost victims of oppression themselves. A certain emulation in misery finds place between the two as they tell their wrongs. Each will have it that his own condition is the worst. Both have suffered by the same exactions. The 'gentleman' sees the greater part of his old estates alienated to the clergy, under threats of purgatory if the owners did not yield. The husbandman finds himself rack-rented by his clerical landlords, while tithes and confessional charges, 'prestes dueties and clerkes wages, Byenge of perdones and freres quarterages, With chirches and aultares reparacion' consume much of what is left.

'We tourmoyle oure selves nyght and daye  
And are fayne to dryncke whygge and whaye  
For to maynteyne the clargyes facciones<sup>3</sup>.'

<sup>1</sup> Printed at Marburg, by Hans Luft, 1530.

<sup>2</sup> This was translated into German by Sebastian Franck: *Klag-brieff der armen dürftigen...wider die reichen geystlichen bettler...* 1529 (B. M.).

<sup>3</sup> *Dialoge*, &c. ed. Arber, p. 139.

Such a dialogue was peculiarly English, in another sense than that it dealt wholly with English affairs. The fundamental situation would hardly have seemed plausible elsewhere. To represent peasant and knight fraternising over their common misfortunes, would probably have occurred to no German pasquillist whatever. Both classes might indeed be sufficiently hostile to the old ecclesiastical order, but they fought in different camps, they wanted different things, and their common enmity permitted at most such a suspicious and half involuntary alliance as that of Berlichingen. A strong government, like that of Wolsey, might have forced them to make common cause, like the 'Gentleman' and the 'Husbandman' of the English dialogue; but in its absence their class antipathy occupies as large a space in the picture as the ecclesiastical conflict itself. If the dialogue of the Gentleman and the Husbandman fairly represents the state of English society of the time, the truest picture of that of Germany, at least of South Germany, is drawn in the Concilium, already mentioned, of Utz Eckstein<sup>1</sup>.

*Catholic  
Dialogues.*

The characteristic qualities of the Protestant dialogues are best thrown into relief by a glance at the work of their rivals. It is comparatively scanty in amount and mediocre as literature. The Catholic church in England had no extraordinary satirist like Murner in its service. John Heywood, whose satiric powers were perhaps not less, devoted them mostly to exposing her abuses.

<sup>1</sup> A curious parallel to the English dialogue, with a characteristic difference, apparently occurs in a dialogue of which only the title is accessible to me (Goedeke § 140, no. 40, b.): '*Ain schöner Dialogus oder gespräch, zwischen ainem verprenten, vertribnen Edelman und ainem Munch, welichen am unrechsten geschach*, belonging presumably to the time of the Peasants' War.

Skelton unfortunately died at the opening of the struggle<sup>1</sup>. And where the polemical dialogue was used distinctly against the Protestants, it is mostly constructed in a flat, unimaginative manner, without perspective, background, atmosphere, light and shade, and the *brio* which the defenders of an old cause commonly assume with more difficulty than its young assailants. The best known of Catholic dialogues in the latter part of the century, those of Wingfield, published in his own name by Alan Cope, Wingfield, Cope. are as tame and lifeless as most of the dialogues produced by either side at that date<sup>2</sup>. The dialogue of William Barlow upon the origin of the Protestant factions is of the expository kind, interesting chiefly for its autobiographical statements<sup>3</sup>. Nothing indeed in the controversial writings of the time approached two dialogues of Erasmus, translated into excellent English, Erasmus (translated). and issued about 1550 at a Canterbury press, without making much stir—the *Polyphemus* and the *De rebus et vocabilibus*; the former especially, with its admirable picture of the German *Reuter*, had comparatively little application to English conditions<sup>4</sup>.

One among the Catholics was no doubt capable, if Sir T. he had chosen, of borrowing not perhaps the unsavoury More.

<sup>1</sup> It is difficult even to guess the nature of his *dialogi de imaginatione*, mentioned by Bale *sub nom.*

<sup>2</sup> Alanus Copus: *Dialogi sex contra expugnatores missae*, &c. Antwerp, 1566.

<sup>3</sup> W. Barlow: *A dialogue describing the original ground of these Lutheran factions, and many of their abuses*. London, 1553, 2nd edition. Probably written about 1533, the date of his letter of recantation to the King (M. Cotton. Cleop. E. iv.) quoted p. 34 note 2.

<sup>4</sup> *Two dialoges wrytten in laten by the famous clerke D. Erasmus of Roterodame*, &c. Cantorbury, John Mychell *n. d.* (B. Mus.)—*A dialoge between ii. beggars* licensed to Copland in 1567, was perhaps a version of the *πτωχολογία*.

though pungent pen of Murner, but the finer Attic weapon of Erasmus and Hutten. But devoted as he was to the church, and prodigally as he spent his skill and learning in its cause, the huge volume that contains his best arguments for Catholicism could in no way rival one small but golden book in which he had embodied the more than half pagan inspiration of his early manhood. For the rest, this volume—a dialogue against Tyndale's book on the Mass—has pleasing qualities; but it belongs essentially to the less vivacious Ciceronian type. Every circumstance which could provoke any scintillation of dramatic liveliness and seduce the attention from the flow of cogent reasons, is carefully refined away. Cicero has familiarised us with urbane colloquies in Roman villas, where friends, united by common culture and the high breeding of the later Republic, carry on a leisurely exchange of views, and intellectual divergence is rarely accentuated by hot debate. More has introduced something of this *urbanitas* into the uncongenial atmosphere of theological polemics. The scene of the discussion is laid in the pleasant seclusion of the Chelsea library. The opponent is not Tyndale, whose arguments are indeed mostly in view, nor any other ardent Reformer; but a personal friend of More's, who desires if possible to share his faith. Shaken, in spite of himself, by Tyndale's arguments, he only seeks to have his doubts removed. And as if still further to relieve the tension of controversy, the friendly opponent does not himself appear, but is represented by a proxy, a 'Messenger,' who dispassionately reports his objections and receives More's replies. The whole of the prolonged argument, in four books, is conveyed in the form of an account of the conversation addressed by More to the friend who had occasioned it<sup>1</sup>.

<sup>1</sup> *A dyaloge of Syr Th. More knyghte. Newly oversene by the*

Little of the earliest heretic literature of England survived the fitful persecutions of Henry's later years. Roy's dialogue, all but exterminated by the successful energy of Hermann Rinck, and proscribed in 1531<sup>1</sup>, was in 1542 too well forgotten to be worth proscribing<sup>2</sup>. The king's death was the signal for a flood of Protestant literature, largely in the dialogue form, but scarcely at all related to the earlier English efforts which we have discussed. Though Roy and Barlow however were forgotten beyond recall, the German dialogues, which had in some degree influenced the form of their polemic, remained in immense abundance, making proscription out of the question. Even if no direct evidence were to be had, we might infer that some of them fell into the hands of the fugitives from England whom neither spiritual song nor religious drama wholly escaped. It will be seen, however, that for at least one or two cases such direct evidence is to be had. At the same time I have not hesitated, in what follows, to allow the discussion to range considerably beyond this nucleus of ascertained fact. It seems better, in handling a subject from a somewhat unfamiliar point

said *Sir T. M.*, 1530. Some years later he wrote in the Tower another dialogue of essentially the same expository character: 'Comfort against Tribulation,' in three books. Under the figure of the miseries caused in Hungary by the Turks, he speaks of persecution in general (translator's preface). His printer John Rastell put the Turks to a very different use. Some originality belongs to his *A newe booke of Purgatory...a dyaloge betwene one Comyngs an Almayne, a christen man, and one Grangemyn, a turcke* (1530), from the fact that the Turk is made to defend purgatory against the Christian heretic.

<sup>1</sup> Cf. list of proscribed books at Lambeth, printed by Dr Furnivall, *Political religious and love poems*: referred to by Arber, *u. s. p.* 14.

<sup>2</sup> Arber, *u. s. p.* 8.

of view, to give a rather free rein to suggestion and conjecture, and, without insisting on them, at least to put upon record even slight analogies which tend to support it.

## II.

*Second  
Period of  
Dialogues.*  
1547-

In the England of Edward the Mass was still the centre about which theological controversy chiefly raged. Henry's peremptory insistence on its observance long after he had accepted other portions of the Reformed 'platform' gave it a somewhat factitious importance. In regard to rejection of the Papal Supremacy Edward could introduce no more thorough reformation than that already accomplished by Henry: in regard to the Mass he was, in Protestant eyes, a real Reformer. It was natural therefore that satire should fasten upon this single point; and that the subject of the earliest English dialogues, printed by fugitives at a foreign press, and stifled at home, should be the absorbing topic of those which now came out openly under Government favour. The sacrament was dubbed with low nick-names—'Jack in the box,' 'Jack of Lent,' 'Round Robin', and the old fancy of the 'death and burial of the Mass' was revived just when it appeared to be an accomplished fact<sup>1</sup>. Or the imaginary story is carried a stage further back, and the Mass not undergoing 'death and burial,' but being 'tried' with full legal ceremony, and 'condemned.' Or lastly we find the Mass exposed to the most characteristic of all the methods of German dialogue, that of opposing the 'Peasant to the Priest' and sapping

<sup>1</sup> Strype, *Cranmer*, p. 173.

<sup>2</sup> *Ib.* 207. 'A set of rhymes was now (1549) made about the burial of Lent, and publicly sold in Winchester market.'

a solemn creed, like Langland long before, in the name of the shrewd sense of Hodge.

Among the fugitives who returned on Edward's accession was very probably one Anthony Scoloker, of whose life absolutely nothing is known, but whose name appears, as printer or as translator or both, upon a series of theological books of much rarity. All of these were printed either at Ipswich in 1547, or in London in 1548<sup>1</sup>.

By far the most interesting of all that is associated with his name, is the 'Goodly dysputacion between a Christen shomaker and a Popyshe Person, with two other persones more, done within the famous cite of Norembourgh...translated out of the Germayne tongue into Englysshe, by Anthony Scoloker. Imprinted at London by Anthony Scoloker. 1548.' This was a version, crude and faulty enough, it is true, of one of those four dialogues which, with more than one spirited hymn, were the fruits of the first Protestant fervour of Hans Sachs<sup>2</sup>. All were produced in the same year, 1524, and dealt with various aspects of the great struggle. In one, for example, he chastises the hypocrisy of the Roman clergy<sup>3</sup>; in a second he plays the candid friend towards some of the Hotspurs among his own party<sup>4</sup>.

<sup>1</sup> They are enumerated in Ames and Hazlitt, and Dr Grosart has thought it worth while to reprint the list as a contribution to our knowledge of another Anthony Scoloker, the author of the *Daiphantus* (1604). Among them occur several translations from German theology, partly anonymous, partly from Luther and Zwingli.

<sup>2</sup> Cf. *Academy*, May 31, 1884, p. 386.

<sup>3</sup> *Eyn gesprech von den Scheinwercken der Gaystlichen und ihren gelübden, damit sy zu verlestierung des bluts Christi vermaynen selig zu werden. Hans Sachs Schuster.* (B. Mus.)—Discussion between Hans (Lutherisch), Peter (Evangelisch), and a Monk.

i.  
H. Sachs'  
*Disputa-*  
*tion* transl.  
by A. Sco-  
loker.

The fourth, more directly dogmatic than these, describes a dispute upon the authority and testimony of the Bible, held at Nürnberg, between two informal champions of the rival opinions,—a Canon or *Chorherr*, and a shoemaker,—the latter being naturally no other than Hans Sachs himself<sup>1</sup>.

The shoemaker is discovered at the *Chorherr's* door, with a pair of shoes just finished,—a homely situation quite after the genius of these German dialogues. The shoemaker expresses his wonder that the *Chorherr* is not at church. He makes somewhat forced excuses,—among others that he has been feeding his pet nightingale, now drooping and silent with the approach of winter. 'But I know a shoemaker,' returns Hans with meaning, 'who hath a nightingale that beginneth now first to sing<sup>2</sup>.' 'Yea, the devill of hell take that shoemaker and his nightingale, he hath railed on the holy Fathers and on us honourable gentlemen like a very pancake-boy<sup>3</sup>.'

*nennen angezeigt und bruderlich gestrafft wird.* (B. Mus.)—Discussion between Hans (L.) and Peter (E.), turning in part on the zealous consumption of meat on Fridays by which many ardent Protestants testified to their sincerity. Cf. also *Die Unterweisung*, &c. (Goed. § 154, 14). The *Ein argument der römischen wider das christlich heusflein*, &c. (ib. No. 11), I have not seen.

<sup>1</sup> The full title is, *Disputacion zwischen ainem Chorherren und Schüchmacher, Darinn Das wort gotes und ain recht christlich weszen verfochten wirt.* Hanns Sachs, MDXXIIIJ. (Br. Mus.)

<sup>2</sup> *Die Wittenbergisch Nachtigall, die man jetz höret uberall*—Sachs' song of triumph at the Reformation, and probably the most inspired lyric he ever wrote,—appeared in July, 1523. It is reprinted in the Stuttgart *Lit. Verein* edition of Sachs.

<sup>3</sup> *Ausgeholipt wie ein holhipub.* The point of the phrase is untranslatable, since *holhippe*, a sort of flat, sweet cake, had acquired the secondary sense of *schmähung*,—evidently from the habitual behaviour of those who sold them. Grimm, *WB.*, s.v. Scoloker blunders here.

This retort makes the way easy to the inevitable theological discussion. The fundamental question of authority is soon reached. 'You regard not any council, then?' asks the *Chorherr* of the champion of the Bible. 'Yea, verily; that council which the Apostles held at Jerusalem.'

*Chor.* And did the Apostles then likewise hold a council?

*Sh.* Yea,—have ye a Bible?

The *Chorherr* bids his *Köchin* bring forth the 'great old book.' Unaccustomed to the order she brings the more frequently desired 'Decretals,' a precious tome anxiously guarded from spot or stain. She is despatched a second time, and at length returns with a dusty and cobwebbed volume, by the aid of which Hans gains an easy victory.

The *Chorherr* appeals to his man-cook, who, however, exults openly in the shoemaker's triumph, and closes the *iam profligatum bellum* with a not inferior Biblical artillery of his own. Furious at the betrayal, he dismisses the cook at a moment's notice. His maidservant commiserates her master's misfortune, and hopes he will not again incur the risk. 'Oh never fear,' he replies, 'I will take good precautions against him: "the burnt child dreads the fire."' And he proceeds to forget his discomfiture in giving orders for a goodly feast with the *Caplan*:—'Fetch me a capon or *twelve* from the market, lay out the dice and the cards, and above all take away the Bible<sup>1</sup>!'

<sup>1</sup> Scoloker has taken considerable liberties in his translation. He has not merely given the *Köchin* a name, Katherine, and altered that of the 'cook' 'Calefactor' from Heinrich to John, but repeatedly slurred idiomatic and difficult phrases, missed the finer *nuances* of wit and the finer turns of conversation, and

2.

English  
Dialogues  
of the same  
school.  
John Bon  
and Mast  
Parson.

Sachs' work evidently belongs, as already hinted, to the most characteristic type of Protestant dialogue,—that in which the humble layman, the peasant or artisan—expressed his sense of intellectual as well as moral superiority to the clerical representations of scholasticism. Sachs' shoemaker refutes the precentor, as Utz Rychsner's weaver refutes the parson, and both weaver and shoemaker are close portraits of the weaving or the shoe-making author. Among the original English dialogues of this time is at least one which belongs essentially to the same type<sup>1</sup>. Of its origin nothing is known, except that it was printed, in 1548, by Copland. A peasant, it will be remembered, ventures, under a mask of rustic *εἰρωνεία*, to question his priest upon the strange mystery of 'Corpsycursty.' The priest has found John working betimes in his field<sup>2</sup>, and opens the debate with a com-

mitted at least two gross blunders. The second of these is amusing, and suggests that Scoloker was ignorant of a very familiar proverb. In the *Chorherr's* reply to his maid's warning immediately after the dismissal of the *Calefactor*—('Ich will mich nun wol vor im hyetenn, verprents künd fürcht fewer'), he ingeniously detects a reference to the fire just abandoned by the banished cook, and translates, 'I shall kepe me from him well enough, thou wicked and excommunicate knave, take heed of thy fire!'

<sup>1</sup> 'John Bon and Mast Parson;' ed. Hazlitt, *Remains of Early English Poetry*.

<sup>2</sup> Cf. a similar situation in the dialogue of Veltin Sendler: *Ein schön Frag von einem Bawren, wie er einen Pfaffen gefragt hab, ettlicher Artickel halben* (B. Mus.).—The *Bawr* is found working in his garden,—

'Es stünd ein Bawr in seinem garten

In sawrem Schwayss thet er des abends warten.'

He is much less acute than John Bon, and puts his questions only at the instigation of a passing pilgrim. His initiation into Reform is however as complete as it is rapid. 'Are ye the Anti-

pliment on his industry. The talk is easily led to the Corpus Christi procession, then the greatest English festival, and John, professing bovine ignorance of the nature of the sacrament ('Is Corpus cursty a man or a woman?'), contrives to entangle his opponent in self-contradiction and heresy<sup>1</sup>.

If the 'John Bon' is constructed on the 'Peasant 3.  
*versus* Parson' type of German dialogue, a second dia- *Robin*  
*Conscience.*logue displays that of the 'son *versus* the father.' This is the so-called interlude of *Robin Conscience*<sup>1</sup>; where the moral and Protestant son, Robin, refutes the worldly aims of his father *Covetousness*, his mother *New-guise*, and his sister *Proud-Beauty*. It is true that the names of the characters show that the piece is not to be entirely separated from the Moralities among which Collier includes it. But the Moralities hardly ever arrange their *personnel* so undisguisedly upon the type of the family as is here done. Virtues and vices confront one another, the hero plays his part among them, and here and there a casual hint of relationship is doubtless dropped; but as a rule the relations of the persons are simply those of the ideas they personify: they are allies or they are opponents, but rarely fathers, mothers, sisters or brothers. And the 'Robin Conscience' family, vividly drawn as it is, belongs to the type which must be called normal in the German polemical dialogues, so far as they deal with family relations at all. As in the *Bruderliche Warnung an Mathis Zell* already mentioned, and in a

christ, or do we wait for another?' is his first greeting to his priest. The priest on his part is drawn with a transparent hatred which frustrates its own purpose and produces a gross caricature instead of the lively portrait of 'Mast Parson.' 'Knowst thou not,' he asks for example, 'that in all things we live and teach contrary to Christ?'

<sup>1</sup> Extracts in Collier, *Annals of the Stage*, Vol. II.

rather later dialogue (Goedeke, § 140, No. 51) *von der Beycht*<sup>1</sup>, the militant energy, the quick conscience of the Reformation are here embodied in the son, while the father, as in those cases, represents with more or less energy the older faith. In the *Barbali* we have already seen an instance in which mother and daughter are similarly related.

The 'drama of debate' in England.

The dialogues so far described all belong to the simplest type—the discussion between two persons which Wiclif apparently understood by the terms when he strangely called his own discussion between *three* the *Triologue*. In Germany as we have seen the Dialogue had long ago attained far greater elaboration of structure. It had become, as in the *Rychstag* and the *Barbali*, a little drama of debate, with changes of scene and time, and a liberal diversity of speakers. In England this developed type of the polemical dialogue was hitherto unknown. Soon after the accession of Edward, however, appeared two remarkable examples of it; and it is significant that the earlier of the two is attached to the name

<sup>1</sup> *Ein hübscher Dialogus oder gesprech vierer personen, als unter Vater, Sün, Tochter und eynem Pfaffen, von der Beycht, wie unnd wem man beychten sol...* Jacob V. (Vielfeld), 1526. A brief account of this dialogue, of which a probably unique copy exists at Berlin, I owe to the great kindness of the librarian of the Königliche Bibliothek, Dr von Gebhardt, whose courtesies in this kind I am far from being the first to enjoy. The interesting analogy suggested by the title to the *Robin Conscience* scarcely goes beyond the relation of father and son which I have indicated. Instead of being opposed to the son, the daughter shares his disinclination to confess,—though from a different motive, viz. 'weil sie letzthin dabei eine schlimme Erfahrung gemacht.' She then disappears from the scene. The son finally goes at his father's request; but 'confesses' in such sort that the priest at first rejects him as 'Martinisch,' but is at length convinced of the justice of his view, 'und zuletzt sind sie ein Herz und eine Seele.'

of an eminent physician, long an exile in Germany, familiar with its language, and of all the English refugees perhaps the best acquainted with its highways and by-ways,—Dr William Turner. The particular form which the dialogue took in his hands, that of a Trial at bar, or ‘Examination,’ was itself quite familiar there.

The ‘trial-motive’ lent itself to two distinct contro-  
versial purposes, neither of which was quite satisfied by the  
simple dialogue. One who desired to mediate between  
extreme views, or to discriminate between better and  
worse arguments, or in general to represent any unpopular  
*tertium quid*, could scarcely put his case adequately in a  
colloquy of two persons. He demanded a more compli-  
cated type of discussion, with more speakers, finer grada-  
tions of opinion, clearer marked phases of development;  
—with room for a Glaucôn and an Adeimantus as well  
as for a Thrasymachus. Between the violent partisans  
on either side appeared the moderates, reasoning with  
them alternately, choosing and distinguishing, confirming  
and rejecting; and it was a natural and effective de-  
velopment to represent the advocate of moderation as at  
the same time the mediating judge, to whom the rival  
parties appealed or before whom they were summoned.

On the other hand, the same motive was evidently  
equally available for a more ordinary kind of contro-  
versialist. If it lent itself readily to the purposes of the  
mediator, it also provided a telling framework for the  
most unmeasured castigation. Instead of being merely  
refuted in a private argument, and slinking away with  
no witness of his humiliation but the reader, the enemy  
was a prisoner at the bar, forced to listen to his own igno-  
minious condemnation and sentence, and finally dragged  
off to tortures in which theological vindictiveness could  
revel without check. The mere introduction of a *judge*,

*Uses of the  
Trial-  
motive in  
Dialogue.*

listening with an air of impartiality to both sides of the case before he pronounced upon them, was an appreciable element in the general rhetorical effect; to the sympathetic reader his most unqualified verdict insensibly appealed with a certain authority; like a Greek chorus, he seemed the impersonation of judicial reason confirming the assertions of the advocate, a Philip of evident sobriety setting his seal to the judgments of a Philip obviously ardent and possibly biassed.

*Trial-  
motive in  
Germany.*

Both causes tended to keep the 'trial-motive' in the repertory of the German writers of polemical dialogue. Suggestions of it lay doubtless near at hand. The purely literary *disputation* had continually exhibited it in the germ: the Owl and Nightingale choose an arbitrator, Pierre de la Broche and Fortune debate before Reason, in the *Ackermann aus Boehmen* God is called in to decide between the Widower and Death<sup>1</sup>. On the mediaeval stage too it was so familiar, that the procedure of the law-court ranks with the Easter liturgy of the Church among the *idées mères* of the modern drama. Among contemporary German dramatists also the taste for rhetorical disputation had already found vent in numerous 'trial' scenes; the *Fastnachtspiele* were particularly fond of this solution for domestic difficulties, and numerous versions of the *Susanna* story were making one of the most striking trial scenes in literature familiar in every great city of the land. It had thus been no striking innovation when Utz Eckstein applied this method to the purely polemical dialogue and gave his notable attempt already briefly mentioned, to pacify the exasperated peasants, the form of a debate before a judge. The delegate of the peasants 'Hans Eigennutz' pleads their cause before the *Stadtgericht* of Fridberg; the nobles

<sup>1</sup> Scherer, *Gesch. d. deutsch. Litt.* 268.

reply; when both parties have been heard, the burgermeister Herr Salomon, and the other *Herren des Gerichts* take counsel together, and their sentence, to the effect that 'man soll nicht schmeihen obrigkeit,' is read by Johann Scheidmann, the Town Clerk<sup>1</sup>. A mediator who found his task even more thankless than Eckstein's, Witzel:  
*Dialogi.* resorted to the same method a dozen years later. The three books of dialogues<sup>2</sup> of Georg Witzel are an elaborate effort to restore the shattered unity of the church on the basis of mutual concession<sup>3</sup>. There is no attempt as in the *Rychstag* to simulate an actual trial; the debate is a true colloquy held in the garden of one of the disputants, whose wife is visible in the background; the essential feature is that the honours of the discussion do not belong to the advocates of either side,—to the learned Catholic Ausonius, to the ignorant but self-assured Lutheran citizen Teuto, the host, or to the learned but equally self-assured Lutheran preacher, Core,—but to 'the judge' Palemon, and his confederate Orthodox,—the latter the principal advocate of the *media via*, the former the mouthpiece of

<sup>1</sup> *Rychsztag der Edlen und Pauren bricht und Klag z Friedberg gehandelt auff dem Rychsztag.* Utz Eckstein. 1526. (B. Mus.)

<sup>2</sup> *Dialogorum libri tres. Drey Gesprächbüchlein von der Religion Sachen in itzigem fahrlichen Zwiespalt auffskürtzest gefertiget.* Leipzig, 1539. (B. Mus.)

<sup>3</sup> Witzel (1501—1573) deserves to be remembered as one of those who undertook to lead the forlorn hope of conciliation in a day of unexampled sectarian fury. Such an attitude was not easy to preserve. Already in this dialogue he leans perceptibly to the Catholic side,—his satire upon Teuto, 'ein parteischer grossomodo' who 'redet visirlich ding wie solche pflegen die sich's am wenigsten verstehen,' and even on Core, is bitter in the extreme. He ultimately became a Catholic and the compiler of a well-known Catholic song-book.

*Lycaon-  
gespräche.*

the author's authoritative verdict in its favour. It was reserved however for the unmeasured partisan to use the trial-motive with a picturesque elaboration to which neither Eckstein nor Witzel made any pretence. I have already briefly noticed the *Lycaon-gespräche*, in which the ruin of Henry of Brunswick is celebrated, somewhat prematurely, by his trial in the infernal court of Pluto. The only aim is here the humiliation of the prisoner, and every detail is made to enhance it. Of serious debate there is naturally none; and the whole weight is thrown upon the final catastrophe, the desperate intrigues of his infernal allies to save him, the indignant charge of the divinely sent judge to the doubtfully affected jury, the condemnation, and the portentous sentence in which Rhadamanthus exhausts the combined resources of the

*Das Spiel  
von der  
Fasnacht.*

Greek and the Christian Inferno. Or, finally,—and here we are brought very close to the work of Turner,—instead of a real culprit, and an imaginary and poetic court, we have an allegorical figure, a popular personification, hustled by the serjeants and advocates of every day. A remarkable *Fastnachtspiel*<sup>1</sup>, for instance, represents the trial of *die Fasnacht*, the genius of Carneval. The *precursor* appears with a warrant to arrest her, and promises the bystanders, in spite of her defiant resistance, that she shall be tried if any will accuse her,—‘that she may answer for her yearly plundering of all Christian folk.’ The trial comes on; the advocates of the nobles, the citizens, the craftsmen, the peasants, the women, successively assail her, but she defends herself boldly, claims the merit of the Lenten fasting which her

<sup>1</sup> Keller, *Fastnachtspiele* No. 51. Though strictly speaking a drama, the ‘*Spiel von der Fasnacht*’ approaches so closely the method of the polemical drama of debate that I mention it here. The two classes merge in one another.

revels usher in, and is triumphantly acquitted by the sympathetic judge.

In the years when Witzel's dialogues were still fresh, W. Turner. and when the struggle with Lycaon was still agitating the whole North from Hesse to Saxony, Dr William Turner was probably beginning his long but laborious and fruitful German exile. A Northumberland man<sup>1</sup>, he had gone to Cambridge, perhaps before 1530, and there became an ardent disciple of Latimer<sup>2</sup>. He appears to have lived there till towards 1540, when the new policy of the King made his position impossible. After a period of preaching in the English provinces he crossed the sea, took his degree at Padua, and then passed into Germany<sup>3</sup>. Here his versatile activity was divided between science and theological polemics. He travelled far and wide in search of rare herbs, and though for the most part living at various points in the Rhine valley,—Köln, Bonn, Strassburg, Basel,—few parts of either Upper or Lower Germany can have been unfamiliar to him. At the same time however he entered with great gusto into the theological war. He made it his work to

<sup>1</sup> Cf. Hodgson, *History of Northumberland*. Neither he nor Cooper (*Ath. Cantab.*) give a perfectly intelligible account of Turner's life. I have attempted at one or two points to clear it up.

<sup>2</sup> Cf. his *The Preservative or Triacle against the Poyson of Pelagius* &c. London 1551; dedicated to Latimer with these, among other words: 'About twenty years ago ye toke great paynes to put men from their evyl works,' and 'we that were your disciples had to do in Cambridge, after your departing from us, with them that defended praying unto Saintes;' &c. (quoted from the Bodleian copy, by Hodgson, *u. s.*).

<sup>3</sup> The chief ground for supposing that his flight took place in or soon after 1540 is the statement of his friend Gessner, 1555, that Turner visited him fifteen years previously. He was in any case at Basel in 1543.

expose the Catholic tendencies of the English bishops, representing them with more prudence than accuracy as acts of rebellion against the royal reformer who had lately enacted the Six Articles. The *Hunting of the Fox*<sup>1</sup> (*i.e.* the discovery of the hidden Romanist in the church) appeared at Basel in 1543, and so far impressed Gardiner that he wrote a reply<sup>2</sup>, of which we can judge to some extent by Turner's rejoinder<sup>3</sup>, where the 'Rescuer' (Gardiner) who had intervened in the Fox's favour, is in his turn confronted by 'the Hunter.' Their alternate objection and reply constitute this in a certain sense a dialogue, but it is of the stiffest mediaeval pattern; the whole suggests that he was using the dialogue form for the first time, with little consciousness of its capacities. A year or two later he returned to the charge in the *Hunting of the Wolf*<sup>4</sup>, a work of greatly increased skill. The 'Hunter' is now joined by a 'Foster'; and both, unlike the somewhat abstract figures of the *Rescuing*, are

<sup>1</sup> *The Hunting of the Roman Fox*, &c. By W. Wraghton, Basil, 1543. (B. Mus.) This is not a dialogue.

<sup>2</sup> *Contra Turnerì vulpem*. Bale, *Catalogus* &c. 1557, *sub nom.* 'Gardiner.'

<sup>3</sup> 'The Rescuing of the Roman Fox: otherwise called the Examination of the Hunter devised by Stephen Gardiner &c. Imprinted here at Winchester A.D. 1545. By me Hanse hit prik.' It was actually, of course, printed abroad; the 'by' before the printer's name perhaps represents the German rather than the English preposition. The substance of Gardiner's defence is pithily conveyed in Turner's dedication to the King: 'as soon as my houndes had found out [the fox]..., a certain sworne advocate of thys beste, drove my houndes from the beste, and saved his life bearing me in hande that the beaste *was no fox but on of your reale dear.*'

<sup>4</sup> 'The Hunting of the Roman Wolf, made by William Turner.' This title evidently belongs to the so-called '*Dialogue between a Hunter, Foster and Dean*,' of which a unique copy, without title-

palpable English burgesses, who have sat in parliament and are riding up to town in company with an acquaintance—a Dean, the partisan, in the discussion which follows, of the older faith.

These three pieces form a single group, carrying on the same image of a fox or wolf hunt, and differing mainly in the literary vivacity of the execution. The fourth, with which we are mainly concerned, is an entirely new departure. Almost every trace of the mediaeval disputation is now obliterated, a troop of well-distinguished characters replaces the routine two or three, and instead of a simple discussion, we have a *trial* with all the ceremony of a court. The Mass 'Mastres Missa' is discovered at the outset still at large, but betraying a large measure of the *ἰβρις* that forbodes misfortune. She loudly exults in her powers; she can break open purgatory,

*Examination of the Mass*<sup>1</sup>.

page, is at Lambeth. Since observing this, I find that Mr Hazlitt has seen their identity in Collections, 1st series. In the Handbook he had not seen it.—The date is fixed approximately to 1547 by a passage near the close: 'The wolf of Winchester about eight or nine years ago bit with his poison'd teeth doctor Crome and doctor Shraxton, whereof Dr Crome seeking remedye betime was helpt from the wolvisch poison and madnes. But Shaxton deferring to long hath now the same poison that Gardiner had, and speaketh as like the wolf of Winchester as any wolf in England.' Shaxton's definite conversion took place in 1546; he had been deprived of his bishopric, by Gardiner's influence, in 1539.

<sup>1</sup> *The Examination of the Mass*. By Wm. Turner (Br. Mus.). Probably 1547. The plot almost implies that Edward's accession had already taken place; and on the other hand the terms of the notice in the *Preservative or triacle against the poyson of Pelagius*, &c. 1551,—'though this strife...were common to me with many, yet had I specially to do with...a Fox,...and with a certain Wytche called Mastres Missa' (quoted from Bodl. copy by Hodgson, *Hist. North. s. nom.* Turner), show that in that year (1551) it was no longer recent.

and release the damned; she is supreme in heaven and earth, for she can 'make God'<sup>1</sup>. An honest but ignorant listener, Master Freemouth, accuses her of profane blasphemy, first, to little purpose, before an old-fashioned Justice of the Peace, then before a wise and enlightened Judge, called, as in Witzel's Dialogue, 'Palemon.' Her cause is pleaded by two advocates Porphyry<sup>2</sup> and Philargyrus, who defend her with much ability but naturally without success, against the indictment of the prosecutor 'Knowledge'<sup>3</sup>. Their attempt at once to defend the Mass by identifying it with the Last Supper, and to confine the right of administering it to a select priesthood, is crushed by unanswerable Biblical arguments. Finally judgment is given, and the unfortunate Mass is condemned to banishment within eight days from England, with a threat of severe punishment should she reappear. With a brief lyric lament at her fate she leaves the scene.

Turner's 'Trial' is undisguisedly English in colouring. The court is a London sessions' house; the officers, so far as they have any complexion, are English court-officers; the prisoner is an English 'wytych.' None the less does the whole scheme of the satire belong to a type of which the home was Germany, not England. The *Examination of the Mass* is the first native specimen of what I have called the 'drama of debate,' long before familiar across the sea. The particular form which it

<sup>1</sup> Such enumerations were already a commonplace of Antimissal literature, cf. e.g. Manuel's *Testament of the Mass*, already mentioned.

<sup>2</sup> Cf. the use of 'Porphyrius' by Kirchmayer in the *Pammachius* as the counsellor of Antichrist.

<sup>3</sup> Cf. the title of Scoloker's lost dialogue, 'Simplicitie and knowledge,' where the latter also presumably represents the Protestant side.

takes,—a trial, had also, as we have seen, abundant analogies there; and finally the author was perhaps the best acquainted of his countrymen with the German speech and German land. Without pressing analogies of detail, such as the choice of the name *Palemon* (as in Witzel) for the judge, or the resemblance of Turner's ignorant Lutheran *Freemouth* to Witzel's 'grosso-modo' *Teuto*, there is ground I think for maintaining that some light is thrown by Turner's German exile on the work which appeared on his return.

Turner's effective satire did not remain unimitated. 'The Endightment against Mother Messe'.<sup>1</sup> In the last days of 1548 appeared another 'Trial,' still more elaborate and detailed than his, but unmistakably parallel in conception. Two Protestants, *Veryte* and *Knowledge*, meet and exchange news. *Knowledge* mentions a certain sorceress, Mother Messe, whose unheard-of pretensions 'have brought the people into develysh trade'; for she claims (like Turner's 'witch') to change the weather, release from Purgatory, and 'make God.' At *Veryte's* desire, *Knowledge* gives information to the serjeant, *Wisdom*, who at once sets out to arrest her. She is speedily found. She greets the officers with insolent defiance, but is reminded that 'the world is not now as it hath been,' and finally submits,—not without an attempt to bribe her jailor, Antipas,—to go to 'suppe her porege in Newgate.' What it is difficult to avoid calling the next 'scene' brings us to the session's house, at 8 o'clock on the following morning. 'The judge, *God's word*, bids *Daniel*, the crier, inquire who has a suit. Mother Messe is put at the bar, and the twelve Apostles are impanelled as jury. Then *Knowledge* as prosecutor brings forward the long and formal 'endightment' for

<sup>1</sup> *A new Dialogue called the endightment agaynste Mother Messe'...*  
17 Dec. 1548 (Lambeth).

'treason, theft and murder.' She is defended, partly by herself, partly by her 'surtise' Master Stifneck and Master Covetous, who after her final condemnation to death, plead for a milder sentence, and succeed in getting it commuted to exile.

The 'Endightment,' upon which I shall not dwell, is evidently only a more elaborate treatment of the idea of the Examination. The preliminary scenes are proportionally longer and more detailed, the persons more numerous; their names are also more consistently allegorical, and more exclusively English. But the conception of the trial is identical; the Mass is, as before, a sorceress; as before she is accused by the advocate Knowledge; and if the judge's name suggests that the author's Lutheranism was warmer than his appreciation of Vergil, he at any rate pronounces the same verdict as the Turnerian Palemon. I regard the Endightment as a somewhat felicitous adaptation of Turner's plan, produced not many months after it.

*Dialogus  
duarum  
sororum.*

The last of the dialogues of Edward's reign which calls for notice here, may be briefly dismissed. One of those accidents which even in our days count for much in international literature, brought into the hands of an English translator, a Dialogue which, like Sachs', was a production of Nürnberg. Wolfgang Resch the author, 'Formschneider' or engraver of that city, appears to have belonged to the large class of German satirists who devoted themselves to correcting the faults of the other sex. He calls his dialogue a 'Zuchtschul der bösen weiber,'—'a reformatory for shrews,'—or, in more detail, 'a proper dialogue of two sisters; the first a godly and virtuous widow of Meissen, the other a shrewish, obstinate and evil-tempered woman of the *Gebirge*'<sup>1</sup>.

<sup>1</sup> 'Ein schöner dialogus oder gesprech, von zweien Schwestern, &c. (B. Mus.). (Goedeke, § 140, No. 57.)

This I assume to be that 'dialogus duarum sororum' which is stated by Bale to have been translated, among other works, by Walter Lynne, 'e Germanico sermone in Anglicam linguam'.<sup>1</sup> It is best described as a practical application of the Pauline doctrine of married life. Justina, the godly widow, exhorts her froward sister to live peaceably with her husband, and finally departs, leaving behind her 'as a New-Year's gift,' 'the Gospel and saving Christian doctrine of Paul.' The whole has scarcely more literary significance than that of an edifying treatise in a slightly picturesque form.

For our present purpose the period which followed the death of Edward may be briefly dismissed. Mary's reign was not favourable to an abundant harvest of so peculiarly Protestant a growth, and the few examples which remain, printed for the most part abroad, belong to an ordinary type. They are interesting however as contemporary pictures of England. Michael Wodde's Dialogue, written at Rouen in Feb. 1554, contains a lively portrait of one who had been in the opposition under Edward, returning with alacrity to the older faith in which he was bred, or as the Protestant author puts it, to the 'blind superstitions' in which he was 'noseled';

*Dialogues  
under  
Mary.*

<sup>1</sup> *Illustr. Vir. Catalogus*, ed. 1548 (Additio).

<sup>2</sup> *A dialogue or Familiar talke betweene two neighbours, concerninge the chiefe ceremonies that were, by the mightie power of God's most holie pure worde, suppressed in Englande, and nowe for our unworthines, set up agayne by the bishoppes, the impes of Antichrist...*

From Roane by Mich. Wodde, 20 Feb. A.D. 1554. (Lambeth.)—The speakers are Olyver 'a professour of Gospell,' and Nicholas, a Catholic. Olyver meets Nicholas on his way to early mass. They exchange greetings. Olyver hints that his neighbour was not formerly found turning out so early to church. 'No, when there was nothing to do but to hear a priest babble. But I thank God I may see my maker again,' &c.—At the close, unnoticed in Mait-

and an anonymous work of some two years later, gives a detailed account of the trial of Ridley at Oxford some months before<sup>1</sup>.

*Elizabeth.* With the fervours and perils of its early days, the Protestant cause lost much of its power of literary inspiration. The peace of Augsburg in Germany and the accession of Elizabeth in England opened an epoch of comparative security and, in the region of what may be called theological *belles-lettres*, almost complete insignificance. Literary power steadily detached itself from the world of Hebraic imagery within which it had so long willingly moved. In Germany the dialogue form sank gradually into disuse as a method of theological controversy, and where it lingered tended to be little more than a traditional trick of style, a literary fashion out of which the zest and flavour had departed. In England, where its vogue had from the first scarcely amounted to a fashion, its later course shows both less evident traces of decay, and more complete independence. It was freely applied to a variety of secular discussions, the vexations of the law, the Spanish invasion, the troubles in Ireland<sup>2</sup>.

land's Catalogue, but apparently also by Wodde, is a short *Dialogue or communication for two children, or unlettred folkes, profitable, &c.* It is a catechism, similar to the *confabulationes puerorum* of Bale: cf. A. Schröer, *Anglia* v. 146.

<sup>1</sup> *A trew Mirrour or glase, wherein we may behold the wofull state of things in our Realm of England, set forth in a dialogue... betweene Eusebius and Theophilus*, 1556. (Lambeth.)

<sup>2</sup> Cf. under the first head, the *Newes from the North, otherwise called the conference betweene Simon Certain and Pierce Plowman*, 1585 (B. Mus.),—one of the liveliest English dialogues of the century, and not unlike that of W. Bullen. Simon, mine host of the Greek Omega, defends the character and public usefulness of the profession against the charges of his friend Pierce. A more theoretic treatment of legal matters had been given long before in the well-known Dialogue between a Student of the laws and

Towards the close of the reign the Puritans within the Church began to apply to the Church itself the method formerly used against the Catholics, but without any apparent resort to the older models<sup>1</sup>. Some measure of the degree to which the main literary current in England had diverged towards the close of the century from that still vigorous in Germany about the middle of its course, may be had by comparing Thynne's Disputation between *Pride and Lowliness* with Hans Sachs' treatment of a precisely similar subject,—*Gesprech zwischen der Hoffahrt und der Demuth*<sup>2</sup>. The long-drawn, sonorous quatrains of the former, with their pomp and luxuriance of phrase, show how far English verse had passed from any possible dealings with the cheerful hobble of Hans Sachs. German influence had passed, as will presently be shown, to a wholly different field. It remains, before turning thither, to review a great neighbouring literary *genre* from which the dialogue at its most ambitious moments was scarcely distinguishable, and in which the genius of Protestantism has deposited its most laborious monument.

a doctor in theology, by the eminent lawyer of the Inner Temple, St Germain (by 1531). Among the anti-catholic dialogues of the reign several of which exist at Lambeth, the most noted is the *dialogus contra tyrannidem Papistarum*, 1562, translated into English the same year (both at Lambeth),—a general survey of the European struggle with Catholicism, country by country as it then stood, at the moment when France and the Netherlands were about to enter on the conflict from which England and Germany had just emerged.

<sup>1</sup> Cf. Udall's *Diotrephes, the state of the Church of England laid open in a conference between Diotrephes a bishop, &c.* (ed. by Prof. Arber, English Scholar's Library).

## CHAPTER III.

### THE LATIN DRAMA.

*Introduction.  
The Latin  
drama in  
England.*

THE very limited number of persons who have seriously examined the remains of our modern Latin drama, have hardly perhaps thought the oblivion which has overtaken it too hard a sentence. It has played the part of undistinguished sister to a woman of genius; overlooked in the more brilliant presence, and perhaps, with the knowledge that rivalry is hopeless, hardly doing justice to her own powers. While the native English drama advanced steadily throughout the century to the incomparable splendour of its close, the history of the Latin plays is a record of desultory production, without growth or advance<sup>1</sup>, without vogue, without continuity. The thrice-refined dilettantism of the later Renaissance, the absorbed pursuit of classical elegance and classical phrase, which often, as in the miserable productions of Gager, involved a sacrifice of higher qualities without gaining its own object, has set its mark on nearly the whole of this hapless branch of art. It scarcely attempted to fertilise itself by any concession to the evidently more vital method of the sister drama, which, on its part, had rapidly appropriated as much of classical method as it could yet assimilate.

<sup>1</sup> Indeed one of the earliest, Grimald's *Archipropheta* is distinctly among the best.

The gulf between them remained fixed; the more secluded drew little advantage from the popularity of its rival; and while the latter remains in scores of contemporary prints, the former now lingers for the most part in MS. at Oxford, Cambridge and London, where it is seldom disturbed.

In Germany however the Latin drama had altogether better fortune. Almost from the first it showed a robust individuality, a genial power of adapting itself to the needs of the soil and climate without giving in to them, which saved it from being either a feeble imitation of the native growths, or a sickly exotic. It fell into the hands of men for whom Humanism did not mean a doctrinaire reproduction of classical models, but a free use of whatever in them was serviceable to the training of Christian citizens: schoolmasters indeed for the most part themselves, and writing in the first instance for those school performances on which sixteenth century paedagogy looked with so much favour. Under these conditions many refinements of style and art were perhaps necessarily forgone; but on the other hand the continual reference to an actual stage and to the needs of actors all young and comparatively unaccomplished in Latin, brought with it just that simplicity and boldness of handling, that rapidity of movement, that homely force of style, in which the modern Latin drama of mere literature habitually fails<sup>1</sup>. And this healthy condition was distinctly fostered by a kindred development of vernacular drama, also in origin a school institution, which in a manner mediated between the

<sup>1</sup> From the same motive, the strict and rhythmic iambic was occasionally preferred to the looser and less easily remembered verse of Terence and Plautus (so Macropedius, cf. his interesting preface to the *Rebelles*); but less skilful writers found cogent reasons for a different choice.

Latin drama and the still vigorous mediaeval Mysteries; borrowing its technique in part from both. Hence the familiar intercourse which set in between all branches of the drama in Germany and which is so hard to parallel elsewhere. Their stock of subjects was in the main the same, the same men frequently wrote in both tongues, their plays were translated backwards and forwards. Burgher and scholar sat as it were at the same banquet, and were served as far as might be with the same dishes. The Rathhaus, the school-hall, the Münsterplatz, or the market-place was the scene of both; the Latin *Susanna* of Sixt Birck was acted in a public garden of Augsburg, the public *Brunnen* serving for the bath<sup>1</sup>; while the whole populace of Strassburg flocked into the school-court to witness the Latin *Saul*. Sometimes a Latin performance before the school authorities, was immediately followed by one in German before the assembled Rath in the Rathhaus, or in the open air in order that, as was said, *beid gelert und ungelert Burger, Bawr, und alle man den profectum wachs und zunehmen der Schulen sehen und erfahren*<sup>2</sup>. At Magdeburg such a double performance was prescribed in the school-statutes, and took place every year<sup>3</sup>; at Solothurn we hear of the *Acolastus* being twice acted in an open place, first in Latin then in German<sup>4</sup>. Frequently the comic scenes intended for the groundlings were given in their idiom<sup>5</sup>; there are even records of a performance of Frischlin's *Phasma* where

<sup>1</sup> Cf. the Epistle prefixed to the first edition.

<sup>2</sup> Baumgarten, *Juditium Solomonis*, 1561, quoted by Goedeke, *Grundr.* p. 306.

<sup>3</sup> Cf. Goedeke, p. 306.

<sup>4</sup> Holstein, *Die Dramen vom verlorenen Sohn*, p. 43.

<sup>5</sup> A. Jundt, *Die dramatischen Aufführungen im Gymnasium zu Strassburg (Einleitung)*.

each speaker after delivering his Latin speech proceeded to render it in German<sup>1</sup>. And where the performances were wholly separate, and the German play, as was often the case, was acted by an 'honourable company of citizens,' often with the Burgermeister at their head, we hear of amicable loans of stage apparatus from the school properties<sup>2</sup>; while, on the other hand, the Rath not unfrequently contributed to the often considerable cost of the school-plays<sup>3</sup>, and at Strassburg finally gave them an appointed income from the municipal budget. The school-drama had after all been warmly and emphatically prescribed by the founders of Protestantism; it played a recognised part in forming good citizens, and if the good citizen who was already formed found its language no longer easy, he still patronised it as a bulwark of morals and manners<sup>4</sup>.

Under such conditions, the Latin drama could hardly aspire to the insipid perfections of academic art. It was barbarous,—as, in Ciceronian eyes, Erasmus' Latin was barbarous,—because it boldly laid hold of modern life, and wrote for modern, if not altogether for unlearned eyes and ears. It was not for nothing that it grew up in the atmosphere of great and almost republican cities, and that Augsburg, Strassburg, Basel, Magdeburg, were the theatre of a production to which Bristol and Norwich were wholly, and even London almost wholly, strange. But

<sup>1</sup> Hase, *D. geistl. Schauspiel*, 114, cit. Jundt, *u. s.*

<sup>2</sup> The Jesuits *e.g.* are said to have lent their *burning hell* to the Burgerschaft of Speyr. Goedeke, § 149.

<sup>3</sup> At Rheinfelden, in 1602, at a performance of the Prodigal Son, the Rath presented the school with 12 gulden *and the calf*. Holstein, *u. s.*

<sup>4</sup> Sixt Birck's dedication of his Latin *Susanna* to the senate of Augsburg breathes a peculiarly lively sense of the bond between the city and the school-drama.

it had great and positive merits too, for which no 'product of the circumstances' theory can altogether account. In England it enlisted barely one or two secondary names in its service<sup>1</sup>,—a Grimald, a Radcliff, an Udall; in Germany the best dramatists of the century wrote wholly in Latin. The best dramatic work done in Germany before Lessing was done in Latin, says the most competent of living men to pronounce<sup>2</sup>. The vigour and versatility of Macropedius, the Aristophanic satire of Frischlin, the severity and reserve of Reuchlin, the real pathos and passion which glow through the too ornate periods of Brülow, entitle them to a place in the most superficial view of modern European drama.

A short history of this in England somewhat neglected branch of letters will best introduce what I shall afterwards have to say in more detail about its various points of contact with our own literature.

## I.

SHORT  
HISTORY  
OF THE  
LATIN  
DRAMA  
IN GER-  
MANY.

### I.

*The Hu-  
manists.*

Nothing perhaps so well illustrates the relative slowness with which the technique of ancient literature, in comparison with its style and phraseology won appreciation north of the Alps, as the heterogeneous and even bizarre collection of dramas produced by the early German Humanists. Several of the most conspicuous masterpieces of German Humanists certainly approach antiquity much more nearly by their style than by conception or structure; the *Encomium Moriae*, the

<sup>1</sup> I do not reckon Cowley, whose *Naufragium Jocularare* is certainly one of the most brilliant of English Latin comedies but falls, like the *Ignoramus*, outside our period.

<sup>2</sup> W. Scherer, *Gesch. des Elsasses*, 300.

*Laus Veneris*, for instance, are evidently built upon purely mediaeval motives. But the majority of their dramas betray a relation to the classical theatre at most by their respectable Latin. In 1470 was performed at Heidelberg the first drama produced by Humanism out of Italy,—the *Stylpho* of Wimpheling; some sixty years later, the publication of Gnapheus' *Acolastus* at length struck a fruitful vein and virtually originated the characteristic German school of Latin drama. These sixty years—three-quarters of which were the very hey-day of German Humanism—were scarcely more than a period of desultory experiment in the history of this essentially Humanist form of art. At least four types of drama were put forth,—not, it is true, always with the same intention or with the same seriousness. The *Ludus Dianae* exhibited by Conrad Celtes before Maximilian at Linz in 1501, and the *Spectaculum* of Jacob Locher acted at Ingolstadt the following February, were scarcely more than pageants, allied on the one hand to the mediaeval *ludi*, on the other to the Court Masques,—pageants to the last in their loose structure and their indispensable splendour. In Celtes there is almost no pretence of action. Diana and her nymphs, Sylvanus and his Fauns, Bacchus, and his Bacchides come forward successively in three so-called acts; but their sole business is to express in flowing hexameters the favour naturally felt by the deities of hunting, love and wine for the young heir of the Roman empire.

Locher's *Spectaculum*<sup>1</sup> is dramatic in much the same sense as Scott's 'gathering of the Clans.' The first 'act' is as purely epic as a Euripidean prologue, a long narra-

<sup>1</sup> *Spectaculum in quo reges adversum Thurcum consilium ineunt*, s. l. 1502.

1.  
Pageants:  
Celtes:  
*Ludus  
Dianæ*,  
1501.  
Locher:  
*Spectacu-  
lum*, 1502.

tive, in hexameters, of Turkish cruelties, followed by a prayer from the chorus, to which the rest of the play is a prolonged response. In the second act the Pope's legate is seen appealing, still in hexameters, to Maximilian as so many others had appealed, to march against the enemy of Christendom; and the 'player-king' gives the proposal that ready assent which the real one found no opportunity of executing. The third act is a Council on a grander scale; the kings of France, Spain, England and Hungary deliver orations, and declare their readiness for war. Lastly, a lyric dialogue between a 'Capitaneus' and the chief of Rhodes shows that the eastern stronghold of Christendom is as combative as the west, and the fourth act closes with a spirited call to arms—

en age rumpe moras liticen, dent classica vastos  
armorum strepitus, buccina saeva crepat.

The fifth act of actual war to which this should have been the prelude Locher withheld, and history reproduced his aposiopesis. Even where he deals with a genuine dramatic action, as in the *De Iudicio Paridis*<sup>1</sup>, he can scarcely be said to rise above that elementary type of drama which consists in a series of set speeches, and which was perhaps to be expected in a dramatist who evidently knew his Ovid better than his Terence<sup>2</sup>.

<sup>1</sup> Acted before the 'Achademia' of Ingolstadt, July 1, 1502, and printed s. l. the same year.

<sup>2</sup> Another piece of Locher's however, *de sene amatore*, is described as 'angeblich in plautinischer manier' (Goedeke, p. 133): of this, as well as of his earlier *ludus de Thurcis* I unfortunately cannot speak.—As Locher is chiefly remembered as the translator of the *Narrenschiff*, it may be worth while recalling the impressive chapter in which, with the same reference to Maximilian, Brandt gives full vent to the Turcophobia of the time, to which many minds far less constitutionally despondent than his own were a prey.

A somewhat higher dramatic level is reached by a second group of Humanist dramas to which Terence contributed scarcely more than he did to the shows and pageants of Humanism. The social antipathies of Humanism were as little to be paralleled in the narrow domestic world of ancient comedy as its political aspirations. Conventional satire against the ignorance and vices of the Roman clergy, was scarcely more congenial than pictures of crusading Christendom or mythological eulogies of the last of the knights, to a school of drama which reflected far more faithfully the political decay of Greece than the still vigorous public life of Rome. The satiric dramas of the German Humanists show in plot and structure very little trace of this influence. Jacob Wimpfeling's *Stylpho*<sup>1</sup> was produced in 1470 at Heidelberg, where the future coryphaeus of Strassburg Humanism and advocate of the aboriginal *Teutschheit* of Alsace, was still a student. It is little more than a student's *jeu d'esprit*, though somewhat akin to the more elaborate and brilliant *Return from Parnassus* of an unknown Cambridge hand; but it deals a blow with considerable effect at the degenerate race of 'Roman Germans' who crept into spiritual dignity by menial service at the Roman court, one of whom presents himself to the University chancellor armed with the papal recommendation to a curacy, is put through an examination, like the knight's son in the *Return*, and, like him, is dismissed ingloriously at the close, with the sentence that he is *aptior ut porcos quam ut homines pascat*. Equally original from the point of view of ancient comedy is

2.  
*Satiric  
 dramas.*  
 Wimphe-  
 ling:

<sup>1</sup> *Stylpho*, s. l. 1494.—By a strange oversight, repeated even in the 'neu durchgesehene' edition of his and Lorenz's *Geschichte des Elsasses*, Scherer refers to it as *unfortunately lost*.

the *Codrus*<sup>1</sup> of some anonymous Humanist, where a pedagogue whose Latin was of the school of Villa Dei, finding himself deserted by his pupils for more fashionable teachers, goes to Köln to learn for himself the new way, but falls into the hands of Humanist students, who make game of him as mercilessly as the 'pestiferi poetae' who, a generation later, were the terror of the correspondents of Ortuinus Gratius. Finally, the earliest dramatic effort of Reuchlin, who will demand a fuller notice presently, the *Sergius*<sup>2</sup>, was a hit at the relic-mongers. Reuchlin's language, style, and verse,—he writes in a vigorous and flowing senarius,—certainly placed him above both his predecessors; but his plot,—the discovery of a skull, which after being washed and dressed is worshipped as a Christian relic, and finally proves to have belonged to a Mohammedan renegade,—is undramatic as well as unsavoury.

Later

ten.

Neither of these two classes or types of drama can be said to have made its fortune. Isolated cases certainly occur of *ludi* which do more naïve violence to the primary law of drama than even those of Locher and Celtes; particularly the so-called 'Imperial Play' and 'Martial Play' of Hermann Schotten<sup>3</sup>, 'Chronicle Histories' of the rudest kind, where the 'divine victories'

<sup>1</sup> *Codrus* (MS.). Cf. Schulze, *Archiv f. Litteraturgesch.* II, 328 ff., at present the only accessible account of this drama at first hand.

<sup>2</sup> *Sergius*. First printed in 1507, and frequently afterwards.

<sup>3</sup> *Ludus Imperatorius seu Cæsareus, continens umbraticam imaginem horum temporum regni Caroli V., illiusque divinas victorias, imperii felicem exitum et laudem.*—*Ludus Martius, de discordia principum et rusticorum Germaniae*, A. 1525, Colon. 1527. Hermann Schottenius Hesus was also the author of a well-known set of *Confabulationes* for schools, translated later in the century into English, like those of his fellow-dramatist Hegendorf.

of Charles, and those, less 'divine' certainly, of his nobles over their peasantry, are fought once more, the combatants in broad undistinguished masses charging and taking counsel, treating with heralds, &c., all with military energy enough, but with no attempt at the psychological colour without which war is a matter for the circus. The purely satirical drama too had its isolated examples,—above all the savage and obscene attack of Simon Lemnius upon Luther and his wife, powerfully written in elegiacs, like Locher's *Ludus*,—elegiacs in which every couplet becomes an epigram<sup>1</sup>;—and the three strange, barbaric but fresh and sparkling *Tendenzstücke* of Nicodemus Frischlin, to which the whole history of the drama offers no precise parallel,—the *Priscianus Vapulans*<sup>2</sup>, the *Julius Redivivus* and the *Phasma*.

Setting aside then such anomalous or eccentric phases of drama as these, there remain, still within the circle of purely Humanist activity, two well-marked dramatic methods, each of which has its representative poet, and which far from occupying, like the former, merely a curious page in the history of German drama, were nothing less than the cardinal points towards which nearly all its most characteristic work more or less explicitly tended. On the one hand the pious effort of the Nun of Gandersheim to create an immaculate Terence out of biblical and legendary history, was far too congenial to the religious Humanism of Germany to be wholly neglected; and her newly discovered writings,

lin.

3.

'The  
christian  
Terence.'

Chilianus:  
Dorothea,  
1507.

<sup>1</sup> The *Monachopornomachia* is reprinted in Murr, *Neues Journal* II. 85 (1791). Cf. G. E. Lessing, *Schriften*, Th. II. Brief 7.

<sup>2</sup> A slight resemblance to this play may possibly be found, it is true, in the Oxford *Bellum grammaticale*, where Priscianus likewise figures, but where he 'beats' instead of 'being beaten.' On Frischlin, see below p. 100.

edited in 1501 by the discoverer Conrad Celtes, soon found a disciple at one of the centres of religious Humanism, the young university of Wittenberg. The *Dorothea* of Chilianus<sup>1</sup> 'eques Hillerstatinus,' produced there in 1507, would have been the chosen companion of the heroic maidens of Hroswitha<sup>2</sup>; and, though martyrdoms are scarcely congenial to the modern stage, it can scarcely be said that a subject was altogether ill chosen which inspired Handel, and one of the most celebrated *sacre rappresentazioni*<sup>3</sup> of Florence, as well as the solitary 'religious drama' proper to which any great Elizabethan put his hand. It is written in simple but not unskilful prose, and follows the story with comparative fidelity, and considerable effect. Naturally the daring imagination with which Massinger at once enriched and degraded his subject, is wholly out of the question.

4. It was a stronger hand than Chilianus' however which gave the decisive stimulus to the Latin drama. The 'Modern Terence,' Reuchlin: *Sergius* of Reuchlin, withdrawn on grounds of prudence soon after its appearance, was followed a few months later by his epoch-making *Henno*<sup>4</sup>. Its importance lay in two things. It showed how a modern comedy-subject, fresh and dramatic and at the same time perfectly

<sup>1</sup> *Comædia Dorothee passionem depingens*. Liptzk. 1507.

<sup>2</sup> The resemblance is especially close to the *Dulcicius*, where three virgins Agape, Chionia and Hyrena, after an attempt of the *præses* to seduce them, suffer martyrdom. Cf. also the *Fides Spes et Charitas*. The *Gallicanus* also deals with persecution.

<sup>3</sup> *La rappresentatione di S<sup>a</sup> Dorothea* was reprinted very frequently in the 16th century. The authors of *The Virgin Martyr* may possibly have known it, but it was certainly not their main source. The singular error of 'Sabritius' for Fabricius, for example, (the name of the prefect), has no place there.

<sup>4</sup> *Scenica Progymnasmata*. Argent. 1498. Cf. L. Geiger, *Reuchlin*, S. 89.

healthy<sup>1</sup>, might be effectively made the base of a Latin play; and its well-turned verses made clear that the true medium was neither the epic hexameter of Celtes nor the elegiac of Locher, still less the prose of Wimpheling, Hroswitha and Chilianus, but the dramatic senarius of Terence. The most effective part of the plot is drawn from the famous farce of *Pathelin*, then some twenty years old. The *drappier*, the astute advocate, and astuter *bergier* re-appear in their familiar parts; a domestic Dromo borrows the shepherd's weapon, and foils both draper and advocate with his impenetrable '*Ble.*' But this central incident is placed in a different setting, which has a good deal of merit of its own. It is one of the weak points of *Pathelin* that it has two heroes, and that the second, the *bergier*, is introduced, like a subordinate, without preparation, in the middle of the play. Dromo is, on the other hand, from the first the mainspring of the whole action. Sent by his master Henno to purchase cloth of one Danista, with certain *gulden* (aurei) abstracted from the private hoard of Henno's wife, Elsa, he contrives to secure both cloth and money, and to cheat at one stroke the draper, his master, and his master's wife. The draper accuses him; he seeks help from the advocate, and the trial follows with the familiar result. *Pathelin* and the *bergier*, the two heroes of the French

<sup>1</sup> In the prologue to the *Sergius* Reuchlin had specially insisted on this:

'Non hic erit lasciviae aut libidini  
Meretriciae aut tristi senum curae locus  
Sed histrionum exercitus et scommata.'

It need hardly be said that the follower of Hroswitha had made the same pretensions in the prologue to the *Dorothea*:

'Phyllidis hinc absint et Demophoontis amores,  
Pollutusque Davus, Pamphilus atque Cremes,  
Penelope.....Hyppolitus.'

farce, are thus combined in Dromo, while the *drappier's* double rôle of creditor and master is distributed between Henno and Danista. The new figures of Henno and his wife serve too to repeat the principal motive of a comedy, for which the *Cheater Cheated* would be a fairly apt title; Elsa cheats her husband by hoarding her gold; he cheats her by abstracting it; and both are cheated by the cheater of the cheating advocate, the arch-cheat Dromo, whose offences are finally condoned in a marriage with his master's daughter, the stolen *gulden* serving as his wife's dowry. It is obvious that these changes, improvements perhaps, in structure, involved one loss for which no technical perfection can console the lover of high comedy. As Dromo is responsible for the sins of Pathelin as well as of the *bergier*, the advocate's rôle loses nine-tenths of its humour; the exquisite double-game between the *drap* and the *moutons*, the feigned tooth-ache, the keen sense of fun with which he works out the situation, necessarily disappear, and a comic creation which may be mentioned without irreverence beside Falstaff after Gadshill, becomes merely the unscrupulous pleader of every day. The result, then, of Reuchlin's remarkable attempt to turn a modern *farce* subject into an ancient comedy may be summed up somewhat thus. Certain characters and incidents have a Terentian or Plautine colouring: the wily Dromo, the purloining of a buried hoard, the final solution of all difficulties by marriage. Finally, the admirably clear and compact structure,—obtained, it is true, at the sacrifice of a situation which lay wholly beyond the horizon of ancient comedy. The *Henno* is in so far typical of the whole modern Latin drama of which it occupies one of the most remarkable pages; it told by high excellences of a low kind, by success in satisfying the more mechanical

canons of art, by skill of structure, unity, singleness of plot; but it frequently missed in the search for them the more impalpable perfections which perhaps only a Molière entirely succeeded in combining with them<sup>1</sup>.

It is possible that the popular drama of Italy may have contributed something to the *Henno*; and shortly after its appearance another Italian influence asserted itself in Germany which demands a moment's notice. It told entirely in one direction,—the comedy of vulgar love-intrigue. Three Latin plays by Italians were reprinted or translated in Germany between 1500 and 1520,—the *Poliscena* of Leonardo Aretino (Cracow 1509), the *Dolotechne* of Zambertus (Strassb. 1511), and

tus,  
Ugolino.*

<sup>1</sup> I have intentionally taken no notice in the text of the interesting discussion raised by Hermann Grimm (*Essays*, N. F.), and ably continued by Geiger (*Reuchlin*, s. 80 ff.) upon the relation of the *Henno* to a German Fastnachtspiel, *Der kluge Knecht* (Keller, No. 107), which coincides with the drama in substance and in numerous details. Grimm, who first pointed out the resemblance, regards the Fastnachtspiel as the source of the drama, but neither Goedeke, Keller nor Geiger, nor, so far as I know, any one else, has accepted his view, though, through the uncertainty of the date of the former, it cannot be disproved. I have only two remarks to offer. 1. Whether Reuchlin or the author of the Fastnachtspiel was the first to use the *Pathelin*; both probably knew it independently. Dromo's magic monosyllable *Ble* is not likely to have been reached from the *bergier's Bée* through the medium of the *knecht's* quite different *weiw*; and on the other hand, the Fastnachtspiel name for the deluded tradesman, *Der Duochman*, is obviously a translation of *drappier*, not of Reuchlin's *Danista*. 2. Both Reuchlin and the *FNSp.* agree in giving eight aurei (*gulden*) as the price of the cloth, for the nine francs or six écus of *Pathelin*. A more exact comparison of the values of these coins in the 15th century than I can undertake would show whether the Roman *aureus* or the *gulden* better corresponded in intrinsic value to  $\frac{3}{4}$  écu ( $\frac{9}{8}$  franc); and produce an argument of some weight for the priority of the *Henno* or of the *FNSp.* respectively.

the *Philogenia* of Ugolino da Parma (a prose translation, Augsburg 1518). The common theme of Italian novels,—an *amour* carried to its issue by the aid of old women, slaves, *lenones* &c.,—reappears in a fairly attractive garment of Latin prose. The best appears to me to be the last, where a peasant girl's love for her seducer is pathetically drawn. It was probably from such works as these that a future schoolmaster of note, Hegendorff, produced his *nova comoedia*,—a slight sketch from a similar phase of life, which Goedeke has rather unreasonably praised<sup>1</sup>. 'New' as the author chose to call it, it merely gave a dramatic form to a subject already run threadbare by the novelists, a not yet hackneyed embroidery to a base and worn-out stuff. Hegendorff wrote in the prime of early manhood, but his work is the sapless leaving of an old literature, not the budding promise of a new.

II. It was in the north, in Holland, still as ever to the forefront of Teutonic civilisation, that the work of  
*The Christian* Reuchlin was first worthily taken up and directed into a  
*Terence.* fruitful channel. His mantle fell directly upon a man of  
*The Dutch* great eminence, probably of all modern Latin dramatists  
*School.* the one whose talent had the largest measure of genius,—  
 Macro- George Macropedius, master of Utrecht school. By his  
 pedius, side stand two contemporaries, whose first dramas, though  
 Gnapheus, written long after his, appeared before them,—William  
 Crocus. Gnapheus (Fullonius) of the Hague, and Cornelius  
 Crocus of Amsterdam. All three appear to have arrived  
 independently at the same solution for a practical problem which as schoolmasters they all had to meet: how, namely, to steep a boy's mind in the admirable colloquial Latin of Terence and Plautus without introducing him prematurely to a world of *lenones* and *meretrices*. All three found the solution in what may be generally called

<sup>1</sup> *Comoedia nova*, Lips. 1520, cf. Goedeke, § 113, 10.

the Biblical drama, or, as the strange phrase went, the *comedia sacra*; but with differences in motive and *technique* which, as I have already hinted, cover almost the whole region between the Christian mysticism of the *Dorothea* and the worldly but perfectly fresh and pure satire of the *Henno*, or at least tend to converge upon one or other of the two venerable dramatic schemes of which the *Dorothea* and the *Henno* were slight examples,—the tragic struggle of a moral hero with ‘the world,’ his unjust sufferings, persecution, ruin, or his triumph and glory;—and a career of *picaresque* or prodigal adventure, issuing in a final restoration to grace and decency. For the former the Old Testament naturally offered abundant examples; as the *Judiths*, *Susannas*, *Esthers*, *Josephs*, which presently inundated Germany, sufficiently showed; ancient comedy, on the other hand, none whatever. For the latter, Plautus and Terence were a mine of illustration; while the Hebraic genius, to which such stories were as foreign as they were congenial to the Greek, produced perhaps in the whole Bible but one instance, though one of incomparable beauty,—the parable of the Prodigal Son. The latter commended itself to what we may call the Left group, the champions of ‘sacred comedy,’ the ardent Humanists, who vied with the old comic poets, aspired to be the Terences or Plautuses of the age, and to reproduce as far as was consistent with a Biblical subject and a pious intention the art, the colouring, the society, the atmosphere of Plautus and Terence. Such, on the whole, was Gulielmus Gnapheus, the author of the *Acolastus*<sup>1</sup>, the most famous and the finest, though not the first, Latin drama upon the Prodigal Son. ‘Our age,’ he writes suggestively in the prologue, ‘has its

G. Gnapheus:  
*Acolastus*,  
1529.

<sup>1</sup> *Acolastus*, Basil, 1534. Performed at the Hague in 1529.

Tullies and Livies, its Virgils and Demosthenes, but of Menanders and of Terences none'; and it is the influence of Terence and not of the parable which dictates the choice of incidents, the complexion of the characters, and nearly every detail of the execution. The division of the inheritance, the return, the forgiveness, on which the whole emphasis of the Biblical narrative is thrown, are touched with extreme lightness; the elder brother, though casually mentioned, nowhere appears. On the other hand, what the parable passed lightly by becomes the main subject of the drama, and the reticent brevity of the *dissipavit substantiam suam vivendo luxuriose* is expanded into a series of striking scenes, painted with the genial vigour of Plautus, and a fearless use of his abundant material.

C. Crocus:  
*Joseph*,  
1535.

A more austere school was represented in Cornelius Cröcus. Gnapheus, originally Catholic, suffered prison and exile for Protestant leanings which finally led him into the camp of Zwingli, Crocus was an inflexible member of the old faith, and ended his days as a Jesuit in Rome. The Prologue to the *Joseph* reads like a counterblast to that of the *Acolastus*. Gnapheus' undisguised admiration for Terence and Plautus is replaced by unsparing criticism of their *fabulas vanas prophanas ludicras et lubricas*, which he elsewhere classes with the *crassissime facetiae Facetiae* of Poggio. This does not however prevent his appealing to their authority on points of *technique*; from justifying the 'happy ending' of Joseph's trials by the *Captivi*, or the length of time which the action covers by the *Heautontimorumenos*. For the rest, the play belongs wholly to another school. The austere and dignified figure of Joseph (in whom, as in Isaac, the current theology saw a type of Christ), the stern but kindly Potiphar, the shameless wife, recall a similar group in one of the noblest tragedies of Euripides, the 'happier ending' notwithstand-

ing, more nearly than anything in the comic drama; and though the *Hippolytus* does not seem to have been in Crocus' mind, he writes throughout with a stately gravity of style which contrasts rather oddly with his predominantly comic metres. The 'comedia sacra' is already far on the way to become 'sacred tragedy.'

Between Gnapheus and Crocus stands the genial and brilliant figure of George Macropedius. Inspired by Reuchlin<sup>1</sup>, but in no way his servile follower, with equal talent for comedy and tragedy, inexhaustible, if not very subtle humour, a genuine power of pathos, now throwing off Teniers-like scenes of boisterous jesting and domestic turmoil, now surrounding the last hours of a rich man divinely summoned to die with a mysterious horror, in its kind hardly to be paralleled in the drama elsewhere, Macropedius was in his chosen field the first of his contemporaries. Like Crocus, like Reuchlin himself<sup>2</sup>, he refers disparagingly to the slippery scenes of the comic poets<sup>3</sup>,—a sort of reference which was soon to be a hackneyed common-place of every prologue, but the very

G. Macro-  
pedius:  
*Asotus*, pr.  
1537, etc.

<sup>1</sup> As he frankly confesses in the important preface to the *Rebelles* and the *Aluta*, 1540: 'Jo. Capnion...collapsus prorsus artificium comicum primus instauravit. Is mihi primus (ut verum fatear) ansam scribendi dedit, is me primus excitavit. Si praeter eum alii ante me scripserint, nescio: hoc scio, quod alios non viderim.'

<sup>2</sup> Preface to the *Sergius*.

<sup>3</sup> 'Non stupra virginum, aut dolos lenonios,  
quibus poetarum scatent comoediae,  
.....sed.....probam  
e veritatis ore lapsam fabulam.  
quid fabulam? non fabulam sed mysticam  
e fonte puritatis haustam parabolam,' &c.

Prologue to the *Asotus*.

The terms of this prologue evidently suggested the similar profession in that of Diether's *Joseph*, n. d. Augsburg.

play which is thus introduced, the *Asotus*, scarcely justified the disparagement, for it belongs quite to the type of the still unwritten *Acolastus*, from a memory stored with Terentian portraits and scenery, and not anxiously scrupulous in their use. But he was too versatile to commit himself to a formula. With his great countryman Erasmus and the mass of northern Humanists, he held to the faith that the ancient art-world was a storehouse of admirable tools rather than of unimpeachable models. If the *Asotus* belonged decidedly to the Left wing of the *Comœdia sacra*, he was equally ready to take up Biblical narratives into which the slightest trait of Terentian character could not have been introduced without dissonance:—‘Lazarus the beggar,’ ‘Jesus in the Temple,’ ‘Christ’s Passion.’ But he was as far from being fettered by Biblical subjects as by classical traditions of treatment, and, after Reuchlin, no one so well deserves the praise of having naturalised the spirit of modern comedy in the Latin drama. The *Bassarus*, *Andrisca* and *Aluta* are subjects almost as unconventional as the *Sergius* itself: practical jests in low life, chastisement of miserly officials or unruly women, thefts of food and wine, such as abound in the *Schwänke* of Ulenspiegel, from which indeed the *Aluta* is directly borrowed; and in the *Rebelles*, a graphic picture of school-boy adventure, we have the connecting link between this purely modern comedy of Teutonic *espéçlerie* and the *bizarre* blending of Plautus’ genial worldliness and Hebraic solemnity which created the *Asotus* and *Acolastus*.

*The South-west.*

Sixt Birck,  
T. Kirch-  
mayer.

The new move made in Holland was instantly followed up in Switzerland and Germany. This was the more natural because a vernacular drama of entirely parallel tendency was then just starting into vigorous existence. The characteristic mediaeval conceptions of

the drama, sapped by the combined influences of Humanism and religious reform, were slowly giving way in every direction. The vast and often formless Mysteries, with their bold representations of the mysteries of faith, and the still more formless *Fastnachts-spiele* with their mostly gross and trifling plots, were irrevocably doomed. They satisfied the higher artistic sense of the new generation, its keener eye for structure and *technique*, as little as its quicker instinct of reverence. In the most remote regions of the land, from the Baltic to the Alps, the same solution almost instantaneously presented itself, and men turned as by a common impulse to the open treasury of dramatic subjects contained in the historical books of the Old Testament and Apocrypha, and the parables of the New,—the Romancero of the Jewish people<sup>1</sup>.—Even before Gnapheus had touched the parable of the Prodigal Son, Burkardt Waldis in remote Riga had produced a German *Verlorener Sohn*<sup>2</sup>, much less brilliant in colouring but also freer from the limitations occasioned by a comic model; and at the other extremity of the German population, the poet-painter Niklaus Manuel of Bern produced his *Lazarus* (1529), and Sixt Birck of Basel his *Susanna* (1532).

With this vernacular drama the Latin drama entered at once into easy relations. The *Acolastus* was immediately translated and performed, and its influence was very great<sup>3</sup>.

<sup>1</sup> This 'solution' was not of course precisely without precedent even in Germany; an isolated *Susanna* or *Lazarus* occurs here and there among the MS. mediaeval *Ludi*, but it was nevertheless essentially a new departure.

<sup>2</sup> *De parabell vam vorlorn Szohn...*, Riga, 1527: reprinted in Niemayer's *Neudrucke*.

<sup>3</sup> In the remarkable prologue to the Latin version of his *Susanna*

German plays were re-cast ; men who had previously written in German began to turn their German doggerel into *senarii*, or to compose afresh in Latin ; and the use of the Roman style brought with it a more or less extensive adoption of Roman *technique*. The loose continuity of the popular drama began to be broken up into acts and scenes. The modern stage, with its exits and entrances, its messengers and reports, its fundamental distinction between action *on* and action *off* the scene, began to replace the naïvely symbolic scenery of the mediæval *Ludi*, in which the whole cosmos was visibly represented, and every person concerned had his appointed place, like the *domus* of the astrologer's chart, where his whole procedure was always in view. The acts were mostly divided by choruses, in short strophic metres which waver between those of the Roman Ode and of the mediæval Hymn ; even the vernacular writers occasionally attempted the first, and wrote German verse with a scrupulous care which had long been utterly strange to it, and is like a foretaste of the days of Opitz.

At the same time, however, it was plain that the Latin drama had fallen into a society in which humanism and even sound pedagogy were only simple forces among others even more urgent and exacting. The placid atmosphere of school and church, scarcely troubled by the distant ring of religious strife, in which Macropedius and Crocus wrote, is exchanged for the air of a turbulent southern city, in the heart of the conflict. The Turks too, a negligible quantity at the Hague, touched the imagination at Basel. The political neutrality of the academic Dutchmen gives place to pronounced republican fervour ; and at the same time their (1535), Sixt Birck refers to it in a way which implies it to have been perfectly familiar to his audience.

Catholicism is replaced by the for the moment undoubtedly more stimulating faith of Luther.

This singular interpenetration of Humanism with political Protestantism was summed up in two men. Sixt Birck: *Susanna*, 1537, etc. Sixt Birck,—Xystus Betuleius as he rendered himself (with the pun which no German Humanist willingly forwent if it came in his way)—evidently wrote under inspiration of the great civic communities of south-west Germany and Switzerland, then at the height of their splendour and independence. Born at Augsburg (in 1500), passing many years at Basel, first as student, then as schoolmaster, and finally returning to his native place, he breathed his whole life long the keen air of mingled political and Humanist enthusiasm, of which precisely these two cities were the most illustrious seats. His dramas vividly reflect this bias. They aim, as he confesses<sup>1</sup>, to train good citizens, to teach the ideals of citizenship, reverence for the parent and care for the child<sup>2</sup>. His heroes are strenuous, enduring men and women, like *Judith* and *Susanna*. He crowds his stage with motley figures of every rank and class, counsellors, soldiers, magistrates, servants, artisans, priests, women and children, with the obvious intention of making it an image of the city. He delights above all in pictures of the public procedure of city life;—debates in council,

<sup>1</sup> The title-page of the *Judith*, e.g. explicitly describes it as *exemplum Reipublicae recte institutae*; cf. that of the *Zorobabel*: 'in quo typus est regni feliciter constituti, unde monarchae discant' &c.

<sup>2</sup> Cf. the dedication of the *Eva* to his wife:

'Hunc ludum tibi rectius quadrare  
O conjux puto, cui Deus benigne  
Prolem multiplicem dedit...  
Tu cultrix cole sicut Eva recte...  
In hoc gloria sola detur ipsi  
Qui prolem dedit elegantiores.'

banquets in the hall, trials in court,—always with a marked preference for formal speeches over dialogue. The *Judith*, for instance, is, as Scherer remarks<sup>1</sup>, almost a continuous series of such scenes. The opening act is wholly occupied with a solemn council, the capture of Achior naturally involves a second; the consideration of Holofernes' ultimatum demands a third; Holofernes himself cannot dispense with a council of war, and the triumphant return of Judith would have been incomplete without one more imposing gathering in which 'Bethulia' and Jerusalem rejoice together. The elaborate trial in the *Susanna*<sup>2</sup>, the examination of the three servants in the *Zorobabel*,—nay the very catechism to which Eve's 'unlike children' are submitted on the occasion of an unexpected visit from 'Jova<sup>3</sup>,' show a kindred taste, which was indeed already fully developed in his very first drama—*de vera et falsa Nobilitate*, where the kernel of the action is an intellectual tournament between two youths for the hand of one who has equivocally pronounced in favour of 'the nobler' of them<sup>4</sup>. And sometimes, as in the *Eva*, the earnestness of the strenuous citizen is tempered by a genial and fatherly *bonhomie*,— 'Catonibus non ista, crede, scripta sunt!' he calls out to the Zoïluses who lifted their hands at such a subject, and he proceeds *sans gêne* to represent the venerable *Mütter-*

<sup>1</sup> *A. D. Biog.* art. *Birck*.

<sup>2</sup> In its various phases it occupies the greater part of Acts IV. and V.

<sup>3</sup> It was based upon a prose fable of Melanchthon's, and suggested Hans Sachs' delightful version:—*Die ungleichen kinder Eva's*,—in a language infinitely better suited than that of Terence to the quaint household humour of the subject.

<sup>4</sup> The 'kernel' was itself derived from a 'debate' on the subject by Bongarsus, which I have not seen.

*chen* ('matercula') marshalling her well-scrubbed children before the august Visitor.

From the author of the *Eva* to Thomas Kirchmayer is a transition analogous to that from Melanchthon to Münzer, or Ralph Radcliff to Bishop Bale. Totally strange to the imposing civic life amid which Birck grew up, he formed no enduring local attachments, and his career was a series of flights from positions which he successively made untenable. The family and the city have no place in his drama, as they had none in his turbulent Ishmaelite life. He condescends to no homely moralising, no practical counsel; he is an implacable idealist, who has invested his whole moral capital in hatred, and has none left for reconstruction. No gleam of human feeling relieves the iron rigour of his polemic against the 'diabolic rule' of Rome. The positive enthusiasm of Birck for his ideal republic turns into a fanaticism of antipathy which only permitted him to imagine vividly what he abhorred. If Birck resorts to the Bible for types of ideal citizenship,—Judiths, Susannas, Zorobabels,—Kirchmayer searches it for types of Antichrist like Judas and Haman, in whom the true Antichrist of Rome may be lashed in effigy; nay, in one lurid drama, of which I shall presently have to speak in detail, he attempts, with the aid of the Apocalypse, an unexampled historic picture of the papal rule.

To the end of its career the Latin drama of Germany showed traces of the school in which it had first taken definite shape. The *idée mère* to which it might be said to owe its very blood and nerve,—and which had borne fruit in natures so different as those of Reuchlin and Macropedius, Birck and Kirchmayer,—the union of Terentian style and *technique* to subjects at once 'true,' 'sacred,' and 'virtuous,'—was certainly no

C. Scho-  
naeus.

passing inspiration which a new fashion could at once put aside; and so long as Latin plays were written, the cast of mind to which it appealed continued to emerge. Nay, the whole movement might even be said to culminate in this later time in which its authority was on the whole less exclusive; no one, at any rate, laboured with so single an eye to achieve a 'Christian Terence' neither too pagan for piety, nor too Biblical for classicism, as Cornelius Schonaeus, the rector of Haarlem; though the supreme honours for consistency of method ought perhaps to be awarded to another Low-German school-master, Burmeister of Luneburg, who in 1623 corrected the impieties of Plautus by a 'sacred' *Amphitryo*, in which the beguiled Alcmene is replaced by the mother of Christ. Schonaeus was well-known in England,—three at least of his seventeen plays having been reprinted in London almost as soon as they appeared<sup>1</sup>, although our Latin as well as vernacular drama had now emerged from the phase to which they belonged. He is a cool, sober, but not unskilful writer, handling the well-worn stories of Joseph, Susanna, Judith, with scarcely a touch of the enthusiasm which had once transfigured them in the glow of Reformation politics, but with a shrewd calculation of effect which often gives him the advantage over the men of dithyramb. His Judith is no personification of Christian heroism, triumphing over the hated Turks, like Birck's; the crowded scenes, the incessant and multitudinous movement, by which Birck 'expressed his political meaning, are quite absent. Yet he at times makes a more dramatic use of his scantier material. The return of Judith, for instance, from the camp, is, in

<sup>1</sup> *Terentius Christianus, sive comoediae duae* (the *Tobocus* and the *Juditha*), *Terentiano stylo conscriptae...quibus accessit* Pseudostratotes. London, 1595.

Birck, a fine picture of exultant triumph; but its whole force is in the given situation,—the unlooked-for success, the humiliation of a great captain by a woman. She calls out to the guard at once:

Ehem vigil, Oziae mox renuncies  
ut recipiat me victricem intra moenia,  
...Moras abrumpe actutum, ille mox nuncia  
totam domum Israel per me esse liberam.

*Tychophylax.* Io triumphus, ecquid hoc festivius aut laetius  
die illuxit? etc.<sup>1</sup>

The Judith of Schonaeus, on the other hand, remains the self-contained and crafty heroine of Holofernes' banquet. No eager outburst of the good news in the first friendly ear, but a dignified 'economy of truth,' taking nice account of place and person. It is not for the guard to have the first tidings:

*Mel.* Cujus ego vocem hic audio? *Jud.* Cujus arbitrare?  
*Mel.* Nescio.

*Jud.* Hem nescis? *Judithae.* *Mel.* Tunc huc reverteris

*Juditha,* quam jamdudum interiisse putaveramus?<sup>2</sup>

*Jud.* ...sed portam aperi, jam vos beavero. *Mel.* Nihil detrecto, ingredere. Age, nunc dic sodes *Juditha,* quidnam adferas bonae rei. *Jud.* Dicam, sed non nisi convocatis civitatibus optimatibus, etc.<sup>3</sup>

But while this original bent always had its representatives, the Latin drama showed in the latter half of the century an unmistakeable alteration of front. The theory of the Christian Terence involved three assumptions, two of which were distinctly fatuous, while the third was at

<sup>3</sup> Schonaeus, *Juditha* v. 5.

least *borné*. It held that the drama ought to be *true*<sup>1</sup>, and that it must not *represent evil*; and it drew its ideas of dramatic *technique* solely from ancient *comedy*, and that of a single school. The work of writing drama inevitably weakened the two former prejudices, which had indeed from the first been very fairly resisted. Without conflict dramatic action could not be, and the very piety which led the Christian Terences to array their hero in stainless moral beauty, drove them to emphasise, nay to exaggerate, the vices of his enemies or tempters, and before they knew it, that pagan pen which had drawn sin with so little reserve, and which they had begun by indignantly throwing to the ground, was working vigorously in their own pious hands. The pretension of 'truth' again, though it stood its ground longer, was certain to have to give way in the end. It carried its dissolvent with it in the other pretension, with which it was habitually coupled, of 'sacredness.' The latter gave a sort of sanction to any story drawn from the Bible; yet it was evident that many such stories made no pretension to literal truth. Criticism had yet breathed no suspicion against the Pentateuch or the Book of Daniel; but the Parables were in any case 'feigned'<sup>2</sup>. The Biblical recognition of fiction told; secular stories, even pagan myths, gradually established their claims; and *a fortiori*, secular history could not be rejected. The subtly playful creations of Teutonic fancy working on the austere hints of Jewish

<sup>1</sup> I cannot forbear reminding the reader of the admirable discussion scene in Björnson's *Fiskejenten*, where a party of Norwegian peasant-folk do battle with a travelled man of culture for this apparently still stout and thriving prejudice.

<sup>2</sup> Cf. Macropedius' preface to the *Asotus* and Sixt Birck's to his *Eva*, both of whom try to save their case by a distinction between spiritual and literal 'veritas.'

thought, were freely admitted; the delightful *myth* of 'Eva' which Birch had introduced with a half defiant apology, was followed, without one, by the equally delightful *Hansoframea* of Hayneccius<sup>1</sup>,—the story of the incorrigible fault-finder who has been forbidden heaven on account of his unruly tongue, but contrives to enter it by an oversight of Peter's wife, silences the stoutest saints by the vigour with which he reminds them of their earthly failings, and when the blameless Innocents, as a last resource, are sent to drive him out, successfully corrupts them with sweetmeats. The parable of Dives again was developed—not it is true wholly on German soil—into the striking *Hecastus*, almost the latest play of Macropedius, and the yet more dramatic parable of the Prodigal Son became the germ of an unequivocally modern drama of boyish adventure and license<sup>2</sup>.

And subjects wholly without footing in the Bible were not wanting. Vergil, Livy and Ovid, competed with the old chroniclers and contemporary *Flugschrift*. Dido, most international of dramatic heroines, wept the absence of Aeneas in at least three German, as in several Italian, French and English dramas; the stories of Palinurus, Marcus Curtius, Andromeda, Lucretia, were treated at least once. And in modern history George Caleminius anticipated Grillparzer in celebrating Rudolph's triumph over Ottocar; while Rhodius of Strassburg unconsciously

<sup>1</sup> Martin Hayneccius, *Hansoframea*. Lips. 1581. A German version 'Hans Pfriem,' immediately followed, and is reprinted in Niemayer's *Neudrucke*. The story is an old Märchen, noticed by Grimm; it resembles the Fable of *Le vilain qui conquiert paradis par plaid* (cf. Lenient, *Sat. du Moyen Age*, 96) except that the *vilain* does not display the peculiar *Naseweisheit* of Pfriem.

<sup>2</sup> Cf. section v. of the present chapter.

followed Marlowe in dramatising the S. Bartholomew Massacre<sup>1</sup>.

*The  
Senecan  
Renaissance.*

But the change went far deeper than the transgression of a false orthodoxy in the matter of subjects; it affected the very conception of the scope and capacities of the drama. It may be said that the idea of drama as a *fine art*, as something quite other than either a festive amusement or a method of paedagogy, for the first time took deep root. And the process was much aided by the new influence which the middle of the century brought into vogue in Germany, as in England and France—that of Seneca, with Sophocles and Euripides. The austere temper of tragedy has often tended to bring with it a similar austerity of method, a stern deference to canons of art which the comic poet genially puts aside. Certainly the tragedies of Seneca were likely to be unduly impressive in their ostentatious ‘regularity’ to men just escaping from a pedestrian license of form, just divining that the drama had a title to enter the world of poetry. No one contributed more to effect this revolution than George Buchanan, whose *Jephthes* (written at Bordeaux 1540–3, though first printed in 1554) is the earliest tragedy composed north of the Alps in decidedly Senecan form. Like the *Baptistes* which followed after a long interval, it became very popular, partly through its extreme, though somewhat verbose elegance, partly by its felicitous choice of one of the few Hellenic episodes in Jewish history. It inaugurated a sort of parallel movement to the Christian Terence,—a ‘Christian Seneca’; and the later alliance was both closer and more legitimate than the earlier. With the doubtful exception of a single parable, the Jewish records offered scarcely any

G. Buchanan.

<sup>1</sup> *Colignius*, 1615. Of the dramas mentioned in this paragraph I have seen only Frischlin’s *Dido* and Brülow’s *Andromeda*.

opening for the scenery of ancient comedy, and the classical element therefore became for the most part purely external—the phrase and rhythm, the division into acts, or perhaps some subordinate Syrus or Dromo. But with ancient tragedy they had many more points of analogy, and accordingly, while the sacred Terence met a very well-deserved death in the century of its birth, biblical tragedy has kept in some sort fresh until our own, though owing much of its vogue to sheer pietism, as in Klopstock, and much to what, as in Byron, had all the effect of sensational profanity. The Hebrew prophet easily put on the air of the Greek seer; the Sophoclean Tiresias was a type of Elijah, of John, of Nathan; Agamemnon sacrificing Iphigenia, of Abraham, or of Jephthah; even the story of Joseph found a parallel in the Egyptian adventures of Heliodorus' Chariclea<sup>1</sup>. And with all this went a feeling, more or less pronounced, for the familiar appurtenances of tragic style; the dreams which forbode the destined παθήματα before they arrive, the messengers who report them when they are past, the gnomic commonplaces about brief good-fortune and ill-omened arrogance, the choice elaboration of phrase, the weighty and sonorous verse. Even the hapless 'unity of time,' warmly advocated by Scaliger, found a sturdy Teutonic devotee in Balthazar Crusius, whose rigorous use of it is however his chief title to memory<sup>2</sup>.

Two men stand out in the history of the later Latin drama, both of them in some sort sharing in these tendencies, yet with a buoyant originality and

Frischlin.  
Brülow.

<sup>1</sup> Brülow's *Chariclea*, based on the *Joseph* of Hunnius (Scherer *ADB*. art 'Brülow').

<sup>2</sup> Cf. besides his three dramas, *Exodus*, *Tobias*, and *Paulus*, the little treatise *De dramatibus* (Lips. 1609), where he defends his thesis with some learning.

vivacity which sufficiently distinguish them not merely from the rank and file of modern Senecas but from a Jodèle or a Norton.

N. Frisch-  
lin (1547  
—1589).

The fascinating and pathetic story of Nicodemus Frischlin cannot be given here. The network of errors and misfortunes which transformed the gifted and courted Latin professor of Tübingen into the captive who found his release, twenty years later, on the precipice of Hohenurach, has been unravelled with consummate art by one well acquainted with the trials of German university life<sup>1</sup>. A thorough and brilliant scholar, a facile versifier, a boon companion full of wit and high spirits, he was the most eminent man in the little town. He was everything to all men; he could keep a company of unlettered knights in a roar, or entertain his colleagues with the choicer pleasantries of the common-room. He was a chosen comrade of the duke himself, and of that young prince whom Shakespeare years after made immortal with a bad jest as the 'Cousin Garmumbles' of the *Merry Wives*. When a court festivity was on hand, it was Frischlin who had to write the after-dinner play, and when the pageant faded it was Frischlin again who had to sing of it in Vergilian hexameters rugged with guttural names of guests who would have revenged their omission, and not disdaining even the details of the *menu*,—the parables in sugar and nativities in plumcake in which the sixteenth century delighted. Something then of the fantastic audacities of the true Court drama, of the Masque, seems at first sight reflected in Frischlin's most original dramatic work<sup>2</sup>; but they are the au-

<sup>1</sup> D. F. Strauss, *Frischlins Leben und Schriften*, 1855.

<sup>2</sup> He was extremely versatile, and wrote 'sacred comedies' and Senecan tragedies,—a *Susanna* and a *Dido*,—as well as the dramas here in view.

clacities of Aristophanes (whom Frischlin translated into Latin) rather than of Jonson. In the *Julius Redivivus* Caesar and Cicero, the antique masters in war and letters, ascend from the under world to visit the German inheritors of their empire and renown. Eoban Hessus, the 'king of the poets,' and 'Hermann' do the honours, and while Caesar is lost in amazement at the wealth and strength of Germany, her vineclad hills, her splendid cities and their elaborate fortifications, Cicero is forced by his remorseless interrogator to exhaust his vocabulary in eulogy of her Latin poets. The felicitous motive is not very dramatically carried out, and one cannot help contrasting this patriotic drama in which Germany is magnified by an auctioneer-like enumeration of her excellences, with the very different method of Shakespeare's English Histories. The others show the same power of turning abstractions into concrete dramatic action. In the *Priscianus Vapulans* it is the old grammarian who after being flogged ('murdered' as we should say) by scholastics of every profession, finds refuge with Erasmus and Melanchthon. In the *Phasma*, the chiefs of the rival sects are skilfully made to exhibit their various tenets, and are finally disposed of by the apparition (the Phasma) of Pluto. A striking scene for instance illustrates Anabaptist communism by the altercation of a new convert with his goodwife, who loves her husband (and her property), and is nowise disposed to accept his free permission to choose another.

Frischlin's sparkling comedies were eagerly read throughout Germany. In some sense he became a national poet. In a more popular society he might have helped to found a national drama. To make any approach to this was reserved for the great neighbour

*The Strassburg School.*

city of Strassburg, where at the close of the century the periodical plays of the Academy, long before established by Johann Sturm, had become a permanent institution, supported in part by the town revenues, and attended by country people from the whole district. It was here that the first Greek plays were acted;—among them the *Troades*, *Medea*, *Hecuba*, *Prometheus*, *Alcestis*. Even the Old Comedy was attempted, and Aristophanes, scarcely known to what Gervinus has called the Aristophanic age of the early Reformation, amused the ἐπίγονοι. Then came original plays. For the sake of the unlearned spectators a German *argument* was provided. But even with this aid, a Latin play of the ordinary type, with its speeches, its horror of visible incident,—its tendency to throw all action into words, could scarcely have excited an audience which understood the words only in so far as they were translated into action. This was thoroughly understood, and fearlessly acted upon. “Our public,” said Brülow, “cannot away with narratives, it will have everything go on before its eyes; we have to satisfy this want: how then can we follow the laws of ancient drama<sup>1</sup>?” The result was on the whole (so far as I can judge from the very few specimens accessible to me), fortunate; at any rate the frigid solemnity which has overcome all modern imitators of Seneca in his own tongue is effectually dispelled. Who would dream for instance of meeting in a Latin drama devoted to the fall of Sodom<sup>2</sup>, the Elanite sack brought visibly upon the stage, the enemy storming in, the people in tumult, desperate fathers slaying their children, while the children,

<sup>1</sup> Quoted by Scherer, *Gesch. des Elsasses*, p. 299.

<sup>2</sup> Act III. Sc. 5; A. Jundt, *Die dramatischen Aufführungen im Gymnasium zu Strassburg*, 1881, S. 59. The original is inaccessible to me in either the Latin or the German form.

—the little boys and girls of Sodom—cry piteously for their lives in language brimful of the quaint household tenderness which is always lurking in some corner of a German poet's heart :

O weh, hertzlichestes Mütterlein !—

Ach du güldener Vater mein !

—Ach, ich bitt, schenkt das Leben mir,

Mein newen Gürtel schenk ich dir !

—Nim mein Kunckel und Seckel gut,

Mein Nadel und mein Fingerhut ! &c.

The centre of the Strassburg school in the first two C. Brülows decades of the century was Caspar Brülow<sup>1</sup>, professor of Latin at the Academy from about 1607. Perhaps the continual reference to an audience with whom spectacle counted for much, made him even needlessly careless of other parts of dramatic art. He freely chooses epic subjects which only the highest skill could make fit subjects of drama, such as Moses or Andromeda ; gives them a setting full of various resource and invention, while the really stubborn material,—the *onyx au travail rebelle*—is left almost in the rough. The sudden appearance of the unknown Perseus, for instance, before the doomed Andromeda, was not easily welded into the texture of the action ; but Brülow spends three acts exclusively over Andromeda without a word of Perseus, until, at the very moment when the fate of Andromeda and the progress of the action imperatively require the intervention of Perseus (IV. 1), Perseus most opportunely appears. That doubtless betrays a very infantine notion of dramatic structure. Yet the drama is effective and moving, and sparkles with graphic descriptions. Cas-

<sup>1</sup> Brülow, like Frischlin's follower, Flayderus, is a 'discovery' of Scherer's. Cf. his *Gesch. des Elsasses*, p. 296 ff., and *ADB*. 'Brülow.'

siope's exultant joy in her own charms,—the fatal *ῥβρις* which brings down the divine anger upon her (II. 1),—

O colla mollicella! frons loquacula!

O turgidula labella! lacteolæ genæ! &c.;

the account of the desolation wrought in the land by the monster, the terror of the peasants disturbed by it over their cheese and wine (II. 3, 4); and the spiced meats and grinning boars' heads at the banquet after Andromeda's recovery (v. 2), are touched with evident gusto<sup>1</sup>. But none of the higher opportunities of dramatic life are neglected: Cepheus' application to the oracle<sup>2</sup>, his wife's eager questions on his return and her amazement to learn that she is herself the offender; the other questions, still more eager, of the tender, fourteen year old Andromeda; the father's slow and reluctant answer; her terrified prayer for life, passing (somewhat abruptly it is true) into heroic joy that she is to have the glory of saving the state,—in all this there is real and moving power. Less elegant than Buchanan, without the robust geniality

<sup>1</sup> As a contrast between the ornate expression of the modern school and the pedestrian, businesslike manner of the old, take two descriptions of sleep. Birck's Judith describes the fatal slumber of Holofernes thus laconically:

dum stertit ipse somno profundissimo  
acinacem stringens gravem, seco caput.

This is Andromeda's account of the sleep in which she dreamed of the monster:

Postquam sopore nocte grato proxima  
labore telae fessa preli lumina:  
et umbra noctis iam polo decesserat  
frigida, repente visus &c.<sup>2</sup>

<sup>2</sup> In this scene I detect no resemblance to the demeanour of Tiresias. The priest of Ammon gives his information with no tragic reluctance.

of Frischlin, Brülöw had a command of pathos and passion to which Frischlin hardly made pretence, and which tend somehow to evaporate among the choice phrases of the Scotchman. Scherer, the best entitled of living men to pronounce, declares Brülöw to be decidedly the first German dramatist before Lessing,—nay the superior of any English dramatist before Shakspeare<sup>1</sup>; and, with a reserve to the latter statement in favour of Marlowe, I am inclined to assent.

With Brülöw I close this sketch of the Latin drama *Conclusion.* in Germany. Of the promising growths blighted by the Thirty Years' War, none was so remarkable as the school of drama at Strassburg. For some years after the war broke out, production continued here, as elsewhere, seemingly unimpaired; but after 1630 the stream decisively ebbs. At the end of four generations, the vernacular drama reappeared, but in a form totally unrelated to its German past: the Latin drama, which had been the receptacle of the most distinguished talent of the sixteenth century, and which at its close was the single form of it still cultivated with abundant promise, expired finally and without revival.

## II.

A mass of literature so imposing as that just reviewed, THE BEGINNINGS OF LATIN DRAMA IN ENGLAND (1520—1550). could scarcely, in any case, have remained unknown among a kindred and neighbour people familiar with its language. But England was at the same time bound by the close tie of proselytism; it was the most promising field of the blended spiritual and literary Renaissance of which Germany was the native soil, and the Christian Terence in some sense the flower. Moreover, the very moment

<sup>1</sup> *Gesch. d. Els.* p. 300.

when the Christian Terence entered decisively upon its characteristic career was that at which this tie of proselytism was, as it were, officially recognised by the Reforms of 1535—6. What wonder if those who gathered in the fruit did not wholly neglect the flower, particularly when the flower was commonly credited with the virtues of fruit?

It is certain, at any rate, that soon after the date of the decisive opening of the German school of Latin drama, the English enters upon a corresponding phase for which, so far as we know, nothing in its previous career had prepared it. Reuchlin, and in a sense Chilianus, also, prepared for Macropedius and Gnapheus; but if Radcliff, Grimald and Christoferson had any English predecessor in writing dramas at once classical in form and 'sacred' in subject, he has left no palpable trace behind. Absolutely nothing (it is true) has survived from the earlier period except titles and brief descriptions. But a moment's glance at these will show I think that the burden of proof lies on those who take an opposite view.

The earliest certain instance of an original performance in Latin in England,—apart, of course, from those of early mysteries, is the pageant of Luther and his wife which graced the ratification of peace and alliance with France in 1527; 'the most goodliest disguising or interlude,' runs the contemporary report, made in Latin and French, 'whose apparel was of such exceeding riches that it passeth my capacity to expound.' <sup>1</sup> Perhaps the presence

<sup>1</sup> Cf. the description discovered by Collier (*A. of St.* ed. 1879, I. 106 f.). Cavendish's account (*Wolsey*, I. 136, ed. Singer) clearly refers to 1527, not to 1514 as Warton thought. Like most of Warton's errors which relate to foreign history, this may still be found in Mr Hazlitt's edition (IV. 5), and has misled several of his successors up to Mr Collier.

of French ambassadors was the chief motive for the use of Latin; in any case, the performance of a play of Plautus in 1520, when French guests were also present<sup>1</sup>, is, with one exception, the only other early instance of its occurrence at court. Equally meagre and sporadic was the production at the schools and universities. The Master of St Paul's, John Ritwyse, wrote a *Dido*, performed by the 'children' of his school before Wolsey between 1522 and 1532<sup>2</sup>; in thus introducing the 'school-drama' Ritwyse doubtless followed a German precedent, but his subject belongs to the 'romantic-classic' school of Latin drama favoured in Italy<sup>3</sup>, where the moralised *amores* of German paedagogy were unknown,—a taste in no way surprising in the pupil and son-in-law of Lily, whose training was altogether Italian. And lastly, Cambridge and Oxford had produced between them, by 1535, three original comedies,—to which we may add a translation of the *Andria* in 1530. Thomas Artour, elected a Fellow of St John's, Cambridge, 1517–18, afterwards charged with heresy and forced to recant, wrote between 1520 and 1532, the year of his death, a *Mundus plumbeus* and a *Microcosmus*<sup>4</sup>, and John Hoker of Oxford, a 'comedy' *Piscator, or the fisher caught*, 1535<sup>5</sup>. The two former were most probably of the symbolical or mytho-

logical type of the Mask; the titles, at least, denote two kindred pieces of half scholarly, half popular, lore, which later became standing topics of the courtly mask-writers,—the parallelism of man and the world,<sup>1</sup> and the successive ages of the world. The most suggestive commentary is in the lines prefixed to Ford and Decker's *The Sun's Darling*, where the reader is assured that 'it is not here intended to present thee with the perfect analogy between the world and man, nor their coexistence,'... but [the succession of his four Ages, Spring, Summer, Autumn, Winter]<sup>2</sup>.

Second  
Period  
(1535—  
1550).  
*Palsgrave's  
translation  
of the  
Acolastus,*  
1540.

The first definite sign of the new influence was the translation published in 1540 by John Palsgrave of the epoch-making *Acolastus* of Gnapheus<sup>3</sup>. It is a purely paedagogic piece of work, intended to teach Latin phrase and style, but the translator had evidently conceived a high admiration of his author, and openly calls on his own countrymen to follow his example. 'I have chosen for my Latten authour to be Ecphrastes uppon, the

<sup>1</sup> On Nabbes' Mask: *Microcosmus* cf. Ward II. 374, and *note*, where the *Sun's Darling* is referred to. Gengenbach's *Die X Lebens alter* is a play of a very different school upon a kindred motive.

<sup>2</sup> The slender list of early Latin plays in England has been swelled through a not easily excusable blunder of Collier's. Describing a fragment in the Douce collection, printed by Rastell, (*H. of D. P.* II. 280), he says 'it appears to have formed part of a Latin play, possibly by Rightwise master of St Paul's and acted at court by the children under his care. The only part that is left is a scene between two characters Menippus and Philonides, in which M. is giving an amusing account of a journey he had made to hell.' The mere occurrence of such a name as *Menippus* ought to have sent Collier to Lucian, of whose *Nekyomantia* the fragment is, as may be supposed, a translation.

<sup>3</sup> *I. Palsgravi Ecphrasis Anglica in comoediam Acolasti...* Lond. 1540.

comédie entiteled *Acolastus*, not onely for bycause that I esteeme that lyttel volume to be a very curiouse and artificiall compacted nosegay, gathered out of the moche excellent and odoriferouse swete smellynge gardeynes of the moste pure Latyne auctours, but also bycause that the maker thereof (as farre as I can lerne) is yet lyving, wherby I wold be glad to move into the hartes of your graces clerkes, of whiche your noble realme was never better stored, some lyttel grayne of honeste and vertuous envye.'

Whatever effect we may attributē to the excellent J. Christo-  
 grammarian's appeal, it is certain that, in comparison ferson.  
 with those that had gone before, the ten years which fol- N. Udall.  
 lowed Palsgrave's translation were decidedly productive'. R. Rad-  
 cliff.  
 John Christoferson's *Jephthes* (1546), the ten comedies and tragedies (1540-52) of Ralph Radcliff, the 'plures comoediae' of Nicolas Udall and the *Christus Redivivus* (1543), the *Comedy of Fame* and the *Archipropheta* (1548) of Nicholas Grimald, are a respectable contribution, and what is more to the purpose, one at least of these dramas is extant<sup>2</sup>, and we know enough of its author, Grimald, as well as of Radcliff, whose work has wholly perished, to be able to form some estimate of their aims.

Radcliff and Udall, like Gnapheus, were schoolmasters writing in the first instance for their scholars, at Hitchin and Eton, but also, as we are expressly told, for the 'people'<sup>3</sup>. At both schools a play was annually acted, usually in Latin, but at Eton at least, English ones

<sup>1</sup> For the later history of the *Acolastus* in England, see section v. of the present chapter.

<sup>2</sup> The doubt chiefly concerns the *Christus Redivivus*, which is mentioned by Goedeke (§ 113, No. 30) as a Cologne print.

<sup>3</sup> Bale, *Cent.* VIII. 98: *Rad. Radcliff.*—Eton *Consuetudinary*, quoted by Warton and Collier.

were occasionally admitted, if sufficiently amusing, a concession to which we owe the *Ralph Roister Doister*. The comedies to which Bale testifies, but which he does not name, were doubtless written for these occasions<sup>1</sup>. Ralph Radcliff is known almost exclusively<sup>2</sup> from the attractive account which Bale has left of his visit to the Hitchin school. A Lancashire man of good family, he had adopted at the university the new faith to which the greater part of young Cambridge, in the decade 1530-40, was enthusiastically given. In 1538, the year in which his friend Bale entered on his career as the dramatist of English Protestantism, Radcliff opened a school in the dismantled Carmelite monastery at Hitchin. The lower part he transformed into an elegant and spacious theatre; and here every year he caused his pupils to perform plays for the delectation of the country people, and their own

<sup>1</sup> Warton (III. 213) places the '*tragoedia de papatu*' also mentioned by Bale, among them. But in Bale this occurs among the writings which Udall translated for Queen Catherine,—the others being Erasmus' paraphrase to Luke, and to the Acts of the Apostles, and Peter Martyr's treatise on the Eucharist. Can this '*tragedia de papatu*' have been Bernardin Ochino's *Tragedie or dialogue of the unjust...primacie of the Bishop of Rome*, translated in 1549 by Ponet, and given to Udall by an error of Bale's? It was a tragedy emphatically of the kind *not* adapted for dramatic representation.

<sup>2</sup> I am assured by Mr Frederick Seebohm, who very kindly made inquiries for me, that no old MSS. in any way connected with Radcliff now remain at Hitchin, where his family still occupies the site of his school. The family monuments in some respects supplement, in others contradict Bale. It is usually easy to decide between them. Thus, Bale is wrong in assigning the family to Cheshire, instead of Lancashire; but his express assertion (*Cent.* VIII. 98) that he visited Radcliff in 1552, undoubtedly disposes of the vague statement of his epitaph that he 'died in the reign of Henry VIII' (Salmon, *Hist. of Hertfordshire*, p. 165), even if we do not press Bale's further words: *et nescio an...adhuc* (i.e. 1556) *vivat.*

education in ease of manner and distinctness of speech<sup>1</sup>. His library, or '*musaeum*', soon accumulated a great store of these plays, preserved there in ms. together with speeches, letters, common-place books, extracts from the classics, and other literary apparatus for the use of the school; many of which Bale read during his stay. Bale urged him to print, but Latin plays were still, as he well knew, an unheard of commodity with English publishers<sup>2</sup>, and he replied by appealing to the classical excuse which Horace has provided for literary reserve. *Spectacula simul iucunda et honesta*, says Bale of these lost dramas; a phrase which at once recalls the aims habitually professed in the school drama of Germany; and the comparison does not lose point when we examine the subjects. 'Pictures of Christian heroism' would probably have fairly described their scope. The iconoclasm of the Reformation can hardly have found so downright a representative in Radcliff as in Bale or Kirchmayer; rather, one would suspect, the tendencies which made his native county one of the last strongholds of Catholicism, and in later days of Royalism, held him in the Conservative wing of Reform. His heroes are almost exclusively drawn from the records of steadfast endurance, of patient suffering, not of violence and aggression. Griselda<sup>3</sup>, Job, Susanna,

<sup>1</sup> Macropedius wrote with the same motive. Cf. the prologue to his *Andrisca*:—

Nam si in ea agenda exercearis sedulo  
linguae auferas sribiginem ac rubiginem.

<sup>2</sup> Grimald's two plays were printed at Köln; Buchanan's *Jephthes* at Paris, and the *Baptistes* only in 1576 when his reputation was already European, at Edinburgh. The so-called *comedia de vita S. Nicolai de Tollentino* of Galfredus Petrus, printed by the Augustinian Ed. Soppeth in London, about 1510, is an exception which proves the rule.

<sup>3</sup> *de patientia Griselidis*: either from Boccaccio or Chaucer.

the beggar Lazarus, the Melibœus of the *Parson's Tale*, Titus and Gysippus, and the martyr Hus—nay, even Judith, whose memorable feat was only the desperate resort of a people in the last straits of suffering,—these form a group of evidently related figures; and the subjects of his other two dramas, the *defection of Jonah* and the *burning of Sodom* obviously admitted of being treated in the same way, though it would be rash to assert that they were. It is more important to observe that six of the ten subjects are biblical, and that at least two of these were already renowned in the setting of the Latin drama<sup>1</sup>, while the cognate history of the martyrdom of Hus had been handled by one of the most conspicuous of the second rank of Protestants, Johann Agricola, in a German drama of, it is true, very indifferent merit,—published the year before that in which Radcliff opened his school<sup>2</sup>. More than this, in the absence of his plays themselves, it is impossible to say<sup>3</sup>.

The subject was already known on the French stage. A drama on Job by the famous Zürich surgeon, Jacob Ruof, had been in 1535, 'played very seemly by the citizens of Zürich in the Minster courtyard' (Stumpff, *Chronicles of Zürich*, quoted Goedeke, p. 302). Another by Narhamer, 1546.

<sup>1</sup> Besides Sixt Birck's Latin *Susanna* and *Judith*, both easily accessible in Oporinus' collection (1547) of Old Testament dramas, the former also in Brylinger's collection (1541), both subjects were favourites with the German-writing dramatists of Saxony (*Susanna*, Magdeb. 1534 &c.; P. Rebhun, *Susanna*, Zwickau, 1536; Jo. Greff, *Judith*, Wittenb. 1536). There was an early Italian drama on the *Susanna* story: *La Susanna*, by Tiburzio Sacco da Busseto; (Tiraboschi, vii).

<sup>2</sup> Radcliff, like Agricola, probably drew his knowledge in detail of Hus' trial from the Acts of the Council of Constance, published, at Locher's instigation, by the noted jurist Hieronymus de Croaria (Hagenau, 1500).

<sup>3</sup> That the plays were all in Latin ought not perhaps to be taken

The case is somewhat different with the third of the trio. Nicholas Grimald is chiefly remembered as the author of a considerable quantity of verse, preserved in *Tottel's Miscellany* with that of Wyatt and Surrey, and not altogether unworthy of the companionship. He is entitled however to an equally distinguished position in the history of the English drama, as the author of the first extant tragedy. For such, beyond question, though it has scarcely been recognised, is his *Archipropheta, sive Johannes Baptista*, printed at Köln in 1548, probably performed at Oxford in the previous year. A Cambridge man, born like Bale in the Eastern counties, Grimald had migrated on taking his degree in 1540 to the sister university. Two years later he was chosen Fellow of Merton. At that time he was already busy with a Latin drama on a biblical subject, the *Christus redivivus*, printed at Köln in 1543<sup>1</sup>. Of several other biblical works, which may have been dramas,—on the birth of for granted. The opening words, however, which Bale quotes from each drama, leave no doubt of this in at least two cases,—the *Griselda* and the *Lazarus*,—where the quotation is obviously part of a verse: 'Exemplar ut sim muliebris pa[tientiae]'—are the opening words of Griselis, who must have been prologue as well as heroine; 'Viris mulierum garritum obstre[pitantibus]' is the less intelligible opening of the *Dives et Lazarus*. Several other of the openings probably formed parts of verses: the rest belonged to prose dedications. It may be added that the first of Radcliff's works cited by Bale, the *Nominis ac Verbi, potentissimorum regum in regno grammatico, calamitosa et exitialis pugna*, may have stood in some relation which we cannot now define to the elaborate working out of the same idea in the *Bellum grammaticale* mentioned by Harrington in 1591, in terms which show it to have been well-known (cf. Halliwell's *Dictionary*, s. v.).

<sup>1</sup> Goedeke, *Grundriss*, § 113, No. 30. His English biographers (including Mr Hazlitt in the *Handbook*) appear not to be aware of this. I have met with no other trace of this piece, and describe it as a drama solely on Goedeke's authority; Bale's omission of the

Christ, on the Protomartyr, on Athanasius,—Bale's notice is the only record. Removing in 1547 to Christ Church, he lectured there on Rhetoric, explained Terence, Cicero, Horace, Xenophon, and threw off at intervals the lyrics afterwards collected in the Miscellany. The *Archipropheta* belongs to the first year of his work at Christ Church.

Grimald's was by no means the first attempt to treat the dramatic climax of the career of John the Baptist. The fourteen 'books' which Bale devoted to the saint, must have done justice in his ferocious fashion to these closing scenes. And within the previous half-dozen years, Jacob Schoepper, presbyter of Dortmund, and George Buchanan, had unconsciously illustrated the opposite poles of current dramatic method in dealing with the same story. A moment's glance at these will make Grimald's subsequent work more intelligible.

Buchanan: The *Baptistes*—Buchanan's first work<sup>1</sup>—is conceived in the severest style of Senecean tragedy. The story is reduced to a bare outline; the dialogue is of the kind in which development of action tends to degenerate into one of thought, and development of thought into one of expression. There is no crowd of figures, no luxuriant display of scenery, no touch of plebeian humour, no attempt to refine upon a few broad and simple contrasts of character. The entire mass of hostile Judaism is summed up in the Pharisee Malchus; sympathetic or tolerant Judaism in Gamaliel; Herod is the conventional Tyrant<sup>2</sup>, and John the conventional *justus et tenax*, the *Com.* or *Trag.* which he usually prefixes to dramas, would point to a different conclusion.

<sup>1</sup> *Meus, quamquam abortivus, tamen primus foetus* he says of it in the dedication to James VI.

<sup>2</sup> Buchanan seems indeed to have intended the drama to be above all 'a vivid picture of the torments of tyranny' (cf. the *Dedication*).

Prometheus, the stubborn heretic who dies for his opinions. Even John's protest against Herod's incestuous marriage is—perhaps from paedagogic motives—kept almost out of sight, and with it disappears the real main-spring of the story—his personal offence to Herodias—and the tragic distinction of his fate.

No such criticism can be passed upon the work of J. Schoepper: the Dortmund presbyter, the very title of which recalls *Johannes Decollatus, vel Ectrachelistes*, 1546. the fearless realism of the popular stage, the crimson, headless neck and spouting blood of the Church altar-piece. We see the prophet in the wilderness, unmistakeably the man of locusts and camel's hair, with a crowd of disciples about him, and a crowd of Jewish magnates suspiciously looking on. Herod approaches, and the king has to hear himself branded with incest to his face before his meanest subjects. He goes home in trouble. The queen succeeds after many efforts in reading the character of his sad brows, and henceforward knows only one desire, to which John's arrest is the first step. The banquet and dance, disposed of by Buchanan in a brief and colourless *stichomythia*, gives occasion to a very graphic and wholly unclassical scene. We see the servants busy about the loaded tables before the guests arrive, we see the bustle of eating and drinking, the passing of dish and cup, the commonplace amenities of the dinner-table, the dance, the light promise, and then the blankness of Herod's face as he hears the dictated demand. Incoherent explanations break from him: for a moment he is tossed between the two alternatives, then hastily gives the order, and sinks back, deadly pale, with

In the next century this application was made the most of; a translation appeared in 1642 with the title: *Tyrannical government anatomised*.

a muttered 'Pro Jupiter.' The banqueters look at one another, and wonderingly ask what sudden illness has stricken the king: he recovers himself, protests that he is perfectly well, and that it is rather for him to marvel

'quid vobis acciderit, quod non genialiter  
vivitis, ut paulo ante, quod haud exporrigitis frontem poculaque  
evacuatis.'

With all this tragic apparatus, however, we never lose sight of the traditional association of the sacred drama with Terence and Plautus. Not only is the verse throughout written in loose comic measures, but a distinctly comic figure is introduced in Herod's Fool. To the rigid technique of Buchanan such an intrusion would have been intolerable; but Schoepper shared with the majority of Teutonic Humanists the genial opportunism which accepts a good inspiration without nicely scrutinising its antiquity.

Grimald:

*Archi-  
propheta,*

1547

(*pr.* 1548).

Far more striking however is the blending of totally alien schools of drama, in the work which Grimald completed the year following the appearance of the *Johannes Decollatus*. Without ever descending to deliberate imitation it is stamped in every page with an extreme sensitiveness to the various intellectual influences which then agitated the Oxford air. The regime of Seneca at the English universities was just beginning, as that of Terence was drawing to its close; and in the drama as in the schools they struggle visibly for the mastery. John himself is drawn upon wholly tragic lines. The savage desert preacher, who only waits for the casual appearance of Herod in his auditory to publicly denounce him, becomes a Teiresias, considerately reserving his terrible message for the king's private ear<sup>1</sup>. On the

<sup>1</sup> Act II. Sc. 8.

other hand, versification, and several of the characters place it even less equivocally than Schoepper's in the ranks of the Christian Terence. The Oxford, like the Dortmund, Herod has a Fool—Gelasinus, who girds at the plotting Pharisees, tells bitter home-truths to the queen, and exchanges thrusts of tolerable humour with his fellow-servants, Syrus and Syra,—the latter a charming combination of gaiety and kindliness. But the chief beauty of the drama lies in another feature, for which neither Seneca nor Terence can be held accountable,—the passionate love—wholly romantic and modern—which unites Herod and Herodias<sup>1</sup>. Her insatiable hatred of John is not prompted by her injured dignity, but by the threatened ruin of her life with Herod. With genuine tragic art the ominous message of the preacher is immediately preceded by a picture, very tenderly drawn, of their still unclouded happiness (II. 4). On learning the truth, she gathers all the forces of her woman's nature into a single effort to turn her husband's purpose. Herod is half an Oedipus, but it was not from the horrified silence of Jocasta that Grimald imagined the Herodias who, after exhausting all argument in vain, overcomes him by her cry of wounded love:

.....tu

Hisce manibus (qua' ego lubens exosculor)  
 His manibus inquam me iam occidito! sic ego  
 Animam patiar mihi auferri cum sanguine.  
 O mi vir, mi vir optime,  
 Profari plura nequeo  
 Prae lachrymis fluentibus.  
 O mi vir, mi vir optime! (Act III. Sc. 7.)

<sup>1</sup> It is impossible not to be reminded of Calderon's far nobler and more moving picture of the love of the elder Herod and Mariamne in the *El mayor monstruo los zelos*.

In such passages one feels the lyric Grimald of the *Miscellany*; and the drama is full of similar evidence. Every opportunity is seized of substituting lyric measures for the regular senaries: long choruses divide the acts; the very prayers of the Baptist and his disciples are lyrical in form; the banquet scene is so profusely inlaid with songs and music that the essential action is somewhat starved; and a description of Herodias becomes, even in the mouth of a serving-man, a glowing *sonetto d' amore*<sup>1</sup>.

In spite, however, of these vivid reflexions of a purely English poetic culture, Grimald's work belongs distinctly to the German school of Schoepper, — the school of biblical drama moulded, in regard to form, and the mixture of seriousness and humour, upon ancient comedy, but freely admitting tragic motives, and borrowing the tragic machinery of a chorus between the acts. Whether he actually knew the *Johannes Decollatus* I will not pronounce. Several external circumstances make it easily conceivable. Martin Gymnicus of Köln, the printer of the only edition of Schoepper, became, two years afterwards, the printer of the only edition of Grimald. The same channel, whatever it was, which brought him in possession of Grimald's MS., may conversely have brought Grimald in possession of the printed Schoepper. And if a conjecture be permissible, I suggest that this channel may well have been

<sup>1</sup> II. 3.

cui formae fulgor ac decu' est eiusmodi, ut  
videatur esse divinum naturae opus.

suffusa nativo quodam velut minio, &c.

John Bale, a friend and old fellow-student of Grimald's<sup>1</sup>, himself certainly acquainted with the Latin drama of Germany, peculiarly interested in the history of the Baptist, and at this very time living in exile in the Low-countries. No one is so likely to have conveyed the single foreign Latin drama (except the *Acolastus*), of which we have direct evidence in England at so early a date, as its congenial translator<sup>2</sup>; and so insatiable a collector of literature assuredly did not send the *Pammachius* alone.

To the *Pammachius* itself I now turn, and its literary history is remarkable enough to demand a section to itself.

### III.

In 1536, the Convocation of Canterbury, under the guidance of Cranmer, accepted those 'Articles of Religion' in which the English Reformation was initiated with a characteristic mixture of boldness and reserve. Though some cardinal doctrines of the Roman church, such as transubstantiation and confession, were still insisted on, the news of this step was received with triumph by German Protestants. One among them, the most trenchant and vehement polemic of his time, seized the occasion to dedicate to the archbishop a drama of remarkable qualities, and with a remarkable history, to neither of which entire justice has in England as yet been done,—the famous *Pammachius* of Thomas Kirchmayer<sup>3</sup>.

T. KIRCH-  
MAYER'S  
*Pamma-  
chius* and  
J. BALE.

<sup>1</sup> In the *Catalogus* he mentions among Grimald's works an *Ad amicum Joannem Baleum*.

<sup>2</sup> He translated the *Pammachius* before 1548.

<sup>3</sup> Printed 1538, and repeatedly afterwards; also translated several times into German, as well as into Bohemian, and into English. Of this last version nothing is known.

*Life of  
Kirch-  
mayer.*

Kirchmayer has been already briefly noticed as the coryphaeus of the purely Protestant wing of the Latin drama. His stormy and unlovely life is the fitting introduction to the sombre work which was its most remarkable outcome. Born in 1511, at Straubingen in Würtemberg, he studied at Tübingen, and passed thence in 1536 to take the pastorate of Sulza in Thüringen. Here he produced the *Pammachius*; here, four years later, he joined in the literary hue and cry against the Wolf of Brunswick with a drama not less famous, the *Pyrgopolinices*, where the duke Henry, a modern Miles Gloriosus, is brought in intriguing with Pope and devil for the burning of his towns of Einbeck and Nordhausen<sup>1</sup>. These two powerful strokes on Luther's side did not prevent him from conflict with Luther. In 1536 he had published a commentary on the first Epistle of S. John, in which he maintained the doctrine of Election in its most violent form. Luther sent him a friendly admonition, with a request that he would keep his heresy to himself. Indignant at this, Kirchmayer despatched a series of propositions to Wittenberg, peremptorily demanding their acceptance or rejection. Melancthon was disgusted with his vehemence, and refused to reply,—‘non enim libet cum homine furioso litigare.’ The elector however, Johann Friedrich, pleased at the chastisement of his enemy of Brunswick, took notice of

<sup>1</sup> A third drama, which immediately preceded the *Pyrgopolinices*, is interesting as a Protestant handling of the *Every-man* motive already several times treated by Catholics. Kirchmayer makes his meaning perfectly clear. In *Every Man*, the soul of the dying Dives is saved by ‘good dedes.’ In the *Mercator* he is happily converted in time to the doctrines of S. Paul, and is saved by ‘Faith,’ while three Catholics, less fortunate than he, suffer the penalty of their obstinate reliance on their ‘good works.’ The *Mercator* is reprinted in Goldast's *Polit. Imperialia*.

the author, and employed him about his person. His bitter and scathing verse, imposing by its sheer vehemence, made the parson of Sulza a personage in Protestant Saxony. For a time he succeeded in putting the Wittenbergers themselves in the shade. His complaints against Melanchthon had their effect, and when the duke attended the Reichstag at Speier in 1544, it was Kirchmayer, and not Melanchthon, who accompanied him. 'Probably,' adds Melanchthon, telling the story with some bitterness to a correspondent, 'he thinks a bold fellow like this a better man to pit against the moderates.' The same year an inquiry was at length opened into his alleged heresies; he chose not to await the result, and quietly left Sulza. For the next four years he lived an unsettled life at Kempten and other places in Würtemberg. But the disastrous opening of the Smalcald war forced him again to fly, this time beyond the bounds of the empire. In Switzerland he passed some months of considerable privation and suffering, solacing himself meantime<sup>1</sup> with a work afterwards famous in England as the 'Boke of Spiritual Husbandry,'—a sort of theological application, in the bizarre taste of the time, of Vergil's Georgics,—the 'Naogeorgica' in fact, as one suspects he intended, of the Christian Vergil Naogeorg. It owes indeed to Vergil not only the general structure and plan, but a variety of graphic details scattered throughout, and certain touches of a leisurely ornateness which sits somewhat oddly on the vehement pen of Kirchmayer<sup>2</sup>.

<sup>1</sup> Cf. the closing lines of the *Agricultura Sacra* (Basil, 1550):

Haec sacris super agricolis, ac arte colendi,  
casibus afflictus multis durisque canebam.

<sup>2</sup> It is divided into five books. The central topic, the sowing and culture of the good seed, by ritual and study of the Bible, is

But the *Spiritual Husbandry* was not his only occupation. Since the *Haman*, seven years before, he had ceased to write drama; he now returned to it to treat a subject made congenial by his own position,—the career of a prophet neglected and unsuccessful like himself—Jeremiah<sup>1</sup>. Finally, in 1553, appeared the colossal work on the *Papal Realm*, by which English historians chiefly remember him, an inverted *Fasti*, as the *Agricultura Sacra* is a spiritualised *Georgics*, laying bare with the inexhaustible patience of hatred the whole ceremonial and customary life of the Roman Babylon<sup>2</sup>.

With a head already sprinkled with gray<sup>3</sup>, Kirchmayer returned to Germany after the peace. He obtained a living at Stuttgart which he held till 1558, when a sharp decree of the duke of Würtemberg against the Zwinglians forced him again to withdraw. Once more he took refuge in the Palatinate, obtained another living at Wisloch, and died there in 1563.

As the most conspicuous and vehement free-lance of his generation Kirchmayer has sometimes been compared

prepared for by a long description of the character and accomplishments of the ideal 'Husbandman,' and his 'tools' (Vergil's *arma*, *G.* i. 160). Among the latter is the House, every detail of which is minutely prescribed. It must be ordered simply yet pleasantly; and abound with flowers and sweet odours. The 'Musaeum' above all, is to be cheerful, bright and sweet; the books in order gleaming on the shelves, with the Bible crowning all. The third book deals with the actual work of the pulpit, and Naogeorg discusses with the authority of experience the difficulties of the unacceptable preacher.

<sup>1</sup> *Hieremias*. Basil, 1551. He also produced a *Judas Iscariotes*, Basil, 1552.

<sup>2</sup> 'Nunc age (he begins), magnifici mihi membra fidemque Papatus  
Et varios ritus, annique ex ordine fastos  
Musa refer, &c.

<sup>3</sup> Cf. the concluding lines of the *Agricultura Sacra*.

to Hutten, Frischlin and Murner. The comparison is doubtless in each case a somewhat flattering one. Though a fair scholar and a fluent writer, he is altogether inferior to Frischlin in versatility of talent, to Hutten in penetrating and overpowering enthusiasm, to both in intellectual brilliance, and even in command of Latin style; and his sufferings for his faith, though considerable, are scarcely entitled to be put beside Frischlin's dungeon, or Hutten's death in exile among the Zürich marshes. Nor had he, again, any claim to the racy and pithy language of Murner, or to the humour which humanises his polemics, and which permits him, for instance, to pleasantly introduce himself into his most important satire in the feline form which his opponents, in those days of polemical *Goats* and *Bulls*, readily deduced from his name<sup>1</sup>. Yet he has, in a lower degree, the capital talent to which all three owed a good part of their literary fortune,—of fusing the abstract stuff of political controversies into a concrete dramatic form. In a lower degree,—for the fusion is certainly incomplete enough; the polar antagonism of principles is far too distinctly visible through the often shadowy substance of their human representatives; the finer play of motive, the half-lights of moral *chiaroscuro*, tend to be merged in a crude glare of black and white; Pyrgopolynices, Haman, the rebellious Jews, the renegade pope, are simply *antithetic heroes*, whose essential badness is not palliated by any suggestion of moral struggle. Yet with all this, his best scenes are undeniably impressive, in their broadly but powerfully-sketched masses, their vague tumultuousness, their angry and sunless sky. Literary quality in some men reaches its highest point under the stimulus of polemics, in others (*'diverria nobil cosa o si moria'*) it

<sup>1</sup> Cf. the illustrations to *Der grosse Lutherische Narr*.

vanishes as soon as they abandon the point of view of pure art. Kirchmayer belonged emphatically to the former,—nay, it is when he approaches the point of view of pure art that his quality, such as it is, becomes merely insipid. He is not among those who can ennoble an indifferent subject by delicacy of handiwork. He shared with most of his countrymen the incapacity to carve a literary cameo. The Titanism of conception which was the admirable side of the grossness of the age, had its part in him, and he struck his chisel with the hammer of Thor, rough-hewing his massive blocks with as little heed to proportion as to finish.

*Pammachius*<sup>1</sup>.

All these qualities are concentrated in his earliest play. The *Pammachius* is a remarkable attempt to give dramatic form to the Protestant version of the legend of Antichrist. It is in a sense the representative drama of the Reformation era; for nowhere had so elaborate an attempt been made to give the Reformation its 'place in history,' or to exhibit the middle ages in the lurid light shed over them by the laconic dictum of Wiclif and Luther: *the Pope is Antichrist*<sup>2</sup>. Dramatised theology is no longer quite congenial to us, but it is difficult to deny a certain ghastly sublimity to this strange drama, in which the gradual evolutions of history are replaced by a succession of colossal 'divine events,' by which the whole creation is affected.

<sup>1</sup> On the *Pammachius* cf. Scherer in *Ztscht. für deutsches Alterthum* 23, 190 ff., to which I am indebted for some hints.

<sup>2</sup> Among the chief mediaeval plays on *Antichrist* are (1) the Tegernsee play *Vom Ende des Kaiserthums und des Antichrists*; (2) the English Mystery *Antichrist*, (3) the Fastnachtsspiel *Vom Endkrist* (ed. Keller, *Bibl. d. Stuttg. lit. Ver.* Bd. 56, No. 68).

In none of these is Antichrist=the Pope. In one the Pope appears to be the *pater apostolicus*, a distinct figure. On the Antichrist here cf. E. Wilken, *D. geistliche Schauspiel in Deutschland*.

The story of Antichrist is a kind of trilogy-subject, with three distinctly marked antithetic stages<sup>1</sup>. Antichrist is the dominant figure of the second stage only; his reign is prepared for, in the first, by the dissolution of the Empire, and opened with the last Kaiser's resignation of his crown; it closes, in the third, with the second coming of Christ. In the mediaeval dramas upon the subject, the reign of Antichrist is scarcely more than a brief prelude to the final *Juditium*. But the identification of Antichrist with the Pope modified this treatment in two ways. The 'second stage' was changed from a visionary anticipation to a concrete historical reality; and, further, its proximate termination, the beginning of the end, was understood to be brought about by the Reformation. In early Christian days, when the second coming appeared to be at hand, the features of Antichrist had been detected without difficulty in Nero; and twelve hundred years later, the evil rule is still made to open in the age of persecution, at the very close, it is true, of that age, under the most remarkable of persecuting emperors, Julian<sup>2</sup>. The honours of Antichrist are no longer, however, bestowed on the Caesar, but on an imaginary contemporary,—the Pope Pammachius, to whom Julian, the last representative of the declining empire, resigns his

<sup>1</sup> Cf. Zezschwitz, *Das Drama vom Ende des Kaiserthums* &c. The introduction contains an excellent account of the development of the Antichrist legend. The drama has also been translated into German by Zezschwitz.

<sup>2</sup> Julian had already figured in the *Gallicanus* of Hrosvitha, but simply as the persecuting emperor. She is, I believe, the earliest predecessor of Ibsen in this field. Celtes' edition of her might well be known to Kirchmayer and have suggested his somewhat singular choice of a typical emperor.

crown. The opening scenes prepare the way for this consummation. The persecuted Christian pope and the persecuting heathen emperor are both weary of the contest, but by a somewhat violent exercise of ingenuity the remedies they severally seek are made to embitter their enmity and at the same time to invert their parts. While Julian resolves to abandon persecution, Pammachius is deciding to give up a creed inconveniently exposed to it, and in exchange for his divine office, to seek the alliance of hell. So attractive are the terms there offered to him, that when Julian approaches to make his peace, the ex-pope is already inaccessible, and the good emperor retires indignant at his corruption.

In Act II. we are introduced to the infernal court of Satan. His deputies relate their achievements during his enforced absence in the pit. He hears with indignation of the secession of Julian. In the midst of the discussion Pammachius and his councillor Porphyrius are seen approaching. They are at first taken for enemies, and the Fiend expresses his amazement at their audacity; but their suppliant attitude, and their obvious terror, which is comically described, restore composure. Satan very affably invites them to tell their story, and having heard it, congratulates them on their fortunate escape, and promises preferment,

‘Vos bene sperate,’ he concludes, ‘amicitia mea nemini  
Negata est, nec qui voluit regni particeps  
Fieri, frustra est. Sed cedite dexteras,  
Et nomina vestra, quae sint, dicite, ut sciam<sup>1</sup>.’

<sup>1</sup> The Satan of vulgar belief is hardly perhaps recognisable in these lines, nor indeed in any other of his utterances throughout the play. We cannot however infer that Kirchmayer, like Milton, deliberately deviated from the traditional conception; for it is clear that in regard to outward form, at least, he entirely adhered to it;—‘saevum, cornutum, hispidum,’ &c. says Pammachius of his ally;

Preparations are then made for a solemn installation of the new potentate. A year is occupied in the manufacture of the throne and triple crown. Messengers are sent into every province of the empire to summon the people to the ceremony. With an alacrity that amazes Pammachius himself they obey the summons,—‘Parrhesia’ slipping in among them with a modest excuse,—‘solam ambulare mulierem haud decet.’ Lastly come Julian and Nestor, prepared for the worst. They find Pammachius already enthroned on the seat of the Caesars, while Porphyrius prepares to deliver the *Apologia* of imperial papacy; a long and elaborate oration, followed after some unavailing debate by the abject submission of Julian, who recites a mock *Credo* at the dictation of his supplanter; while Parrhesia, unable to restrain her indignation, is abruptly expelled, her mouth filled with mud, and returns to tell Veritas the tale.

In the fourth act the victory of Satan and his allies is complete along the whole line; Christ is vanquished by Antichrist, and in a speech of voluptuous rhetoric, the infernal leader calls on his comrades to begin the life of unrestrained pleasure which nothing can any more interrupt:—

Totos genialiter consumemus dies,  
Nullus laboret, sed feriae sint perpetuae,  
Ludamus, saltemus, bibamus ordine.  
Et nullus ante ponat oblatum poculum,  
Quam ter quaterve exhausserit.  
Et si dies ad haec celebranda gaudia  
Breviares fuerint, pars addatur noctium, &c.

the associations of the literary medium insensibly made for a certain dignity and humanity of expression, whoever the speaker might be. The Devil of the Miracle-plays could scarcely have retained his nature in Terentian iambics. Even Marlowe’s Mephistophilis owes much to the dignified traditions of blank verse.

He summons the whole ecclesiastical host to enjoy this spiritual Cocagne; and monks, bishops, priests pour in open-mouthed with expectation. A fierce struggle for places begins, to the great amusement of Satan, who (remembering his *Bruder Rausch*) calls out for oak staves to be put in their hands:

‘Caedite, bibite, turbis, rixis, clamoribus,  
Alatis poculis resonet convivium.’

From this scene of infernal revelry we pass into heaven, which with Kirchmayer, as with Milton, is far less vigorously imagined than his hell. The universal infidelity is sadly observed by Christ and Peter. There are scarcely seven Churches which have not received the mark of the beast. A poor fugitive interrupts their discourse,—Veritas, for whom there is now no place on the earth, bringing her tearful appeal for deliverance to Christ. She reports that the allies are not content with their triumph, but are preparing to scale heaven itself, and boast that they have the keys. Peter is confident that in that case they must have forged them. Christ calms him with the assurance that Satan and Pammachius will be assigned to a region which no key is needed to unlock, and then proceeds to give Veritas prophetic guidance for her future course. Since she can no longer endure her exile, a place shall be found for her on earth, but it will involve her in much trouble and perplexity. Veritas eagerly assents, and only desires to be shown the place; she is immortal, and can defy all the rage of Satan and Pammachius. Christ then bids her seek out a certain Saxon town upon the Elbe; there she will find one Theophilus, who will receive her and learn her ways, and lay bare all the sores of the Papal realm, and stir up the sleepy Germans to revolt. Sleep has indeed fallen on the victors. Satan and his confederates snore after

their heavy revel. The infernal messenger Dromo rushes in with the news that the Reformation has broken out at Wittenberg. 'O Satan, hearest thou not? Hast *thou* also learned to snore? *Sat.* Ah, who calls? Thou rogue, why dost cry so? *Drom.* Why do I cry? Why do you sleep at such a crisis? *Sat.* What sayest thou? *Porph.* Oh, I can scarce open my eyes. *Pam.* Who is it startles me thus from my sweet sleep?' Dromo then expounds the new teaching of justification by faith.

The most original part of the drama is perhaps the close. At the end of the fourth act, and the beginning of what should be the fifth, the author breaks off. The final act of a drama upon the captivity of the world could only be the close of the captivity at the second coming of Christ. But that being still unaccomplished, the dramatist will not represent it. 'Expect no fifth Act,' he tells his audience.

Kirchmayer dedicated his play in language of warm eulogy, to the archbishop of Canterbury. A book bearing this commendation upon its front, could not fail to be read in England, and there is no doubt that it rapidly became familiar in the Lutheran circles of Oxford and Cambridge. In the following decade, this is, as regards Cambridge, beyond question. A little before Easter 1545, the Chancellor of the University, Gardiner, learned with indignation that the 'youth' of Christ's College, 'contrary to the mynde of the Master and President,' had lately 'playde a tragedie called Pammachius, a parte of which tragedie is soo pestiferous as were intollerable'.<sup>1</sup>

*The Pammachius in England.*

*Performed at Christ's College, March, 1545.*

<sup>1</sup> MS. Corp. C, No. CVI. p. 437 ff. The performance is already noticed in Warton, though with characteristic inaccuracy he in one place (IV. 74) describes it as 'a libel on the Reformation,' in another (III. 302) as 'a dangerous libel, containing many offensive reflections on the papistic ceremonies.' The quaintness of the former description is obvious; but appears to have escaped Mr Hazlitt, who reprints

A peremptory demand for explanation (coupled with a communication as to the provision to be made for deceased cooks), elicited from Vice-chancellor Parker a somewhat equivocal statement. So far from the tragedy having been played by the 'youth' of the college against the will of the Master, the performance had had the full connivance or even approval of the college authorities; nay, the Master himself assured Parker that it had cost the college 'well nigh xx nobles.' He hastens however to add that they had taken precautions against scandal by requiring the omission of all offensive passages, and that all such passages had been omitted<sup>1</sup>.

Moreover, Parker had met no one of the company that had been offended, 'albeit it was thought the tyme and labour might have been spent in a better matter.' This was far from satisfying Gardiner, who called upon Parker<sup>2</sup> to summon the masters and doctors of the University to a joint inquiry into the circumstances of the performance, so that 'by due examination of such as were there it may be truly known what was uttered.' He

the passage without remark. An account of the performance has lately been given for the first time, if we except Cooper's perfunctory notice, by Mr Bass Mullinger, in a monumental work of which it would be poor praise to say that it does for our common University something more than was done for Köln by Bianco, for Vienna by Aschbach, or for Erfurt by Kampschulte. My own account was obtained independently, from the ms. in the Library of Corpus College, before I was acquainted with his. I abridge many details given by him, but the event is too important from my somewhat different point of view to be dismissed with a reference.

<sup>1</sup> Parker's ms. is much erased at this point; he was evidently at pains to characterise the omissions in terms sufficiently severe for his critical correspondent. 'Where there is inspersed through the tragedie both slanderous cavillations and suspicious sentence' is his final combination.

<sup>2</sup> MS. u. s. Letter of April 23rd (not 3rd as in Nasmith).

hinted at the same time his suspicion that though particular offensive expressions might have been omitted, the context was of a nature to imply and suggest them; a suspicion, as we know, amply warranted. The meeting was summoned, and a second letter from Parker reports the result. As we might anticipate, the chancellor's threatening attitude did not tend to encourage unwilling witnesses. The company, whose sympathies were doubtless preponderatingly towards Reform, unanimously declared with more sincerity probably than candour, that there was 'no offence in the play,' or if there was, at any rate they had forgotten it<sup>1</sup>. A copy of the play in which the omitted passages were remarked, was less ambiguous evidence; and it is not surprising that witnesses by no means agreed as to their number and extent. In any case the perusal of the book only deepened Gardiner's anger. He found fault with what they had spoken and with what they had omitted; much that they confessed to have uttered was 'very nought'; some things they had omitted had been better spoken.

One cogent reason for resenting the public performance of the *Pammachius* was apparently not within Gardiner's knowledge: viz. that the fugitive heretic John Bale had already made it accessible to the vulgar in their own tongue. His translation is indeed attested solely by his own statement in the *Centuriae*<sup>2</sup>. Neither the work

Bale's  
Translation.

<sup>1</sup> Parker to Gardiner: '... the answer of all was that none of all the company declared to them that they were offended with any thing that now they remember was then spoken.'

<sup>2</sup> 'Pammachii tragoediam transtuli.' Any doubt as to the identity of this tragedy with that of Kirchmayer, is settled by Bale's quotation of the opening words of his original, which correspond with the first line of Kirchmayer's *Argumentum*. It is possible that the *Pammachius* was not the only tragedy of Kirchmayer translated by Bale. The notice in his *Catalogus* (edition 9, 1548): *Pammachii tragoediam transtuli*, appears in the second and enlarged edition of 1557: *Pammachii tragoedias transtuli*. Had he in the interval

itself nor any other notice of it has come down. It was probably never printed, and, like the mass of Bale's productions, if it escaped the fate of heresy under Mary, certainly suffered that of dulness under Elizabeth.

The Cambridge performance was not witnessed by Bale, who was then in Holland, a fugitive from the equivocal Protestantism of Henry<sup>1</sup>. Whether he first made its acquaintance abroad, or had seen it before he left England, whether he translated it during his exile or before it, whether his version was suggested by the notoriety of the Cambridge performance or was strictly an occasion of that performance, cannot be ascertained<sup>2</sup>. What is certain, and what gives its chief interest to Bale's laconic notice, is that the most unique and curious of his own extant dramas was apparently written with the example of the *Pammachius* in view.

Bale :  
*Kynge*  
*Johan.*

When the converted Carmelite sat down in the course of the year 1538, to write 'comedies' in the spirit of his new faith, he was entering on a still untródden path. No one had attempted in England to create a charac-

rendered also the sister-drama upon Heinrich of Brunswick, in which, though it does not bear his name, the Pope as Pammachius again bears a leading part? The question is the more in point because in the *Pyrgopolinices* Henry VIII. is introduced, in a manner which in spite of Bale's professions of loyalty, cannot have been altogether uncongenial to the exile, coquetting with the infernal powers, and indirectly in alliance with the more terrible and consistent foe of Protestantism, who is immediately assailed.

<sup>1</sup> Cf. *Catalogus Scriptorum*, &c., sub nomine *Henr. rex.* Bale had fled on the death of his protector Cromwell, who, as he confesses, had repeatedly since his conversion delivered him from legal troubles, on the ground of his literary services to Reform (*ob editas comoedias*).

<sup>2</sup> The notice of the translation is the last in the list of Bale's 'comedies.' But it cannot be inferred that it was the last in chronological order, as he may naturally have named the whole of his original writings before a translation.

teristically Protestant drama. Kirchmayer's essay in this kind, simultaneous as it was with his own, cannot yet have been known to him. The entire dramatic produce of this year,—and of his extant dramas, not less than four<sup>1</sup> bear the date 1538,—is the work of a vigorous but inexperienced mind, sufficiently pronounced in doctrine, but indecisive and confused in literary method. He seems to have tried in succession the current types of drama. The *God's Promises* follows with little change the method of the Mysteries; there is the same attempt to abridge the religious history of the world into the limits of a stage, the same multiplication of slightly connected scenes, the same colossal defiance of the unity of time. The *Baptism* and the *Temptation*, on the other hand, recal the simpler subject and method of the Miracle Play. Nor did they admit of more than a surreptitious gratification of Protestant antipathy. The Romanist was no doubt made to peep out under the vesture of incredulous Pharisee and tempting Satan, but a direct and telling assault upon him was scarcely practicable within the limits of a purely biblical drama<sup>2</sup>. The same limitations attached, with little qualification, to the plan of the last of the four, *The Three Laws*<sup>3</sup>. The 'three Laws,'—of Nature, Moses and Christ,—are sent out in succession by Deus Pater, to preach to the world. All receive ill treatment, at the hands of 'Infidelitas' and his subordinates: the Law of Nature flies, struck with leprosy; that of Moses is blinded and lamed; the Gospel is burnt

<sup>1</sup> The *God's Promises*, *The Baptism*, *The Temptation*, *The Three Laws*.

<sup>2</sup> Except, of course, in a Prologue, where, as in the *Baptistes*, the assault might be direct enough.

<sup>3</sup> Printed, with valuable introduction and notes, by A. Schröer, in *Anglia* v.

for heresy; and then the *Vindicta Dei* falls upon Infidelitas. Here the method of attack is virtually the same as before. A plot almost entirely suggested by biblical history is made to yield a weapon of Protestant controversy by the simple process of writing 'Romanist' under the figures of the Hebrew enemies of God. The 'Idolatry' and 'Sodomy' which corrupt the Law of Nature, the 'Ambition' and 'Avarice' which maim the Law of Moses, are thinly disguised monks and priests, like the Pharisees of the *Baptism*, and the Satan of the *Temptation*. And in the same way the divine vengeance which befalls Infidelity represents, under the forms of the old 'Judithum,' the collapse which, to the sanguine eye of the Reformer, imminently threatened the Church of Rome. Only in the description of the troubles of the 'Gospel,' its heresy, and its fate at the stake, does the historical basis of the action fall into line, as it were, with the object of the satire.

Kyngge  
Johan.

In the remarkable drama which was first discovered and printed in the present century, the change just hinted in the *Three Laws*, appears considerably advanced. The biblical scheme of the Mystery is frankly abandoned; the action begins where the interest centres, under the 'Babylonian captivity' of the Church, and it culminates in a 'Reformation' in which no trace of the 'Judithum' of the Mysteries survives. The King is represented defying a group of enemies, 'Sedition,' with his auxiliaries the Pope and the Papal Legate, and the whole spiritual power. Through their machinations, reluctantly supported by the Nobles and the People, he is first excommunicated, then forced to submit, and finally poisoned. After his death *Verity* pronounces an encomium over him, and reproves the Nobility and the Commons for their part in his death. They are easily moved; 'For God's love

no more. Alas ye have said enough'; 'All the world doth know that we have done sore amiss.' Verity urges them to leave their evil ways, and her exhortation is cut short by the entrance of Imperial Majesty, easily recognised as Henry VIII., who hears with appropriate satisfaction that his subjects have resolved to abandon the Pope. The drama concludes with the inevitable hanging of the leading spirit among the conspirators, Sedition.

The *Kynge Johan* is the most original of Bale's works<sup>1</sup>. It is easy however to trace this and that element in it to foreign suggestion. The famous *Satire of the Three Estates*, for instance, which became known in England soon after its performance in 1539<sup>2</sup>, at the earliest, and must have dazzled many others beside Bale with its polish and wealth of language,—evidently supplied the hint of the corresponding three classes of John's subjects. The spiritual and temporal lords and the burgesses, and the suffering John Common-weale who pleads his wrongs before them, are the principal objects in Lyndsay's satire; with Bale they are less important, but their resemblance is unmistakeable. Lyndsay wrote as a high-minded layman, Bale as before all things an ardent churchman. To Lyndsay the worst of ecclesiastical abuses was the legalised oppression of the poor; to Bale this was but an incident of the appalling 'Babylonian captivity' from which the true Church, as he thought, had just broken free.

Of more importance, in my view, was another in-

<sup>1</sup> An interlude concerning King John had however been acted at the Archbishop of Canterbury's in Jan. 1539 (1540), Collier (ed. 1879, I. 124). This was possibly, as Collier thinks, Bale's play; but for our purpose the question is unimportant.

<sup>2</sup> Mr Laing (Lyndsay's Works I.) throws doubt on the supposed production of it in 1535 at Cupar, for which there appears indeed to be no evidence.

fluence. It appears to me clear that the *Kynge Johan* owes much of its peculiar construction to a deliberate imitation of the *Pammachius*, and that it was this imitation which finally emancipated Bale from his clumsy efforts to build a Protestant drama on the ruins of the Catholic mystery. Kirchmayer had taken up the transformed *Antichrist* legend; Bale, without anxious fidelity, followed his lead; Kirchmayer had typified the Empire, whose ruin accompanies the rise of Antichrist, by the emperor Julian; Bale, to whom England naturally took the place of the Empire, found a parallel in the English king whom he has in his rough fashion canonised. For his purpose the analogy may well have seemed sufficiently close, between the 'apostates' of the fourth and of the twelfth century. Both confronted the Papacy at a time when its power had made a momentous advance. If Pammachius was a plausible representation of the newly independent bishops of Rome, Bale's Pope was *à fortiori* a less exaggerated portrait of Innocent. Like Kirchmayer's Julian, Kynge Johan is assailed by a conspiracy in which the Pope takes a prominent part; like him he first resists and then succumbs, though Kirchmayer has not, like Bale, allowed his hero the crowning glory of martyrdom. Finally, each drama closes with an attempt to represent the Reformation. Kirchmayer's superiority is indeed here decided; nothing in Bale is so effective as the scene in which Dromo suddenly awakens the sleepy fiends with the news that Truth has found a champion at Wittenberg. But with Bale also Truth ('Veryte') appears announcing the Reformation, despatched characteristically enough, not by Christ, but by the 'Imperiall Majesty' of Henry VIII., who shortly follows to receive her report and execute vengeance <sup>4</sup>.

<sup>1</sup> In Lyndsay's *Satire of the Three Estates*, 'Veritie' was already

The infernal machinery which is so striking in the *Pammachius* is not adopted in the *Kynge Johan*. Bale was more at home among the abstractions of the Morality than among the concrete forms of the Christian Inferno; and a little band of Vices replaces the Fiends. As Pammachius obtains the supreme rule of the world by his alliance with Satan, so in Bale the Papacy only reaches its full height when the Vice 'Usurped Power' appears *disguised* as the Pope. A new epoch begins for the Church in each case. This Usurped Power (*Disimulation* tells the audience),

For the Holy Church will make such ordinance  
That all men shall be under his obedience,...  
As Gods own Vicar anon ye shall see him sit,...  
He shall make prelates, both bishops and cardinals,...  
He will also create the orders monastical...  
And build them places to corrupt cities and towns, &c.

And the first sign of the new epoch is the overthrow of the great enemy. Pammachius, strong in his new ally, extorts submission from Julian; and the transformed Pope succeeds in breaking the stubborn spirit of John.

To sum up. It would be too much to describe the *Kynge Johan* as a consistent Protestant version of the story of Antichrist, in terms of English history. But it appears to me to have been evidently written with a vivid recollection of the most famous Protestant version then known, and to have been coloured at several points by its associations. John's resignation of his crown, the full development of the Papal tyranny used to represent the new 'Lutherian' doctrines. She enters, 'in hir hand beirand the New Testament' ('in English tounge') to convert King Humanitas. But there is no further attempt to represent the Reformation, to which Lindsay, however he may have sympathised with it, never openly professed adhesion.

of which it is the first mark, and the foreshadowing of final doom in the Reformation of Henry VIII., correspond exactly to the three moments of the Antichrist legend as used by Kirchmayer: the dethronement of Julian, the triumph of Pammachius, the Reformation of Luther.

Bale's attempt to create a Protestant drama,—if the phrase does not wrong a writer so innocent of all strictly literary ambition,—was apparently rapidly forgotten. The Moral-writers under Edward who shared his views went elsewhere for their inspirations<sup>1</sup>; and such vitality as the religious drama still retained under Elizabeth was largely displayed in a set of *genre* subjects infinitely remote from the epic breadth of the *Pammachius* and the *Kynge Johan*. When the latter was once more towards the end of the century brought upon the stage, he still indeed receives honour for having 'set himself up against the man of Rome.'

#### IV.

KIRCH-  
MAYER  
and  
J. FOXE.

'For nearly ten years he had been my Achates; in England we dwelt together in the house of the illustrious Duchess of Richmond, and now once more we are dwelling together in Germany.' So wrote Bale from Basel, in 1556, of John Foxe. The two Boanerges of the English Reformation were bosom friends and house-mates, as well as political allies; they shared the same social *milieu*, the same learning, the same bigotry, the same hatreds, admirations, memories and hopes; and it will hardly seem unnatural if a literary influence which, as we have seen, left some traces in the rude art of the

<sup>1</sup> Edward himself is said to have written an 'elegant comedy' called *The Whore of Babylon*.

one, also coloured in some degree the work of the other,—the strange and lurid drama in which under a veneer of classical expression, Foxe rivalled the crudest of the mysteries in naïve prolixity of form, and it must be added, in essential barrenness of thought<sup>1</sup>.

Settled at Basel, and domiciled with the eminent bookseller, Oporinus, the publisher of one of the best-known collections of sacred Latin drama, Foxe was in contact with the very heart of Protestant Humanism. It was inevitable that in such a *milieu* he should turn over the writings of the Neo-Latin dramatists,—the more so as he had himself written Latin plays in his youth. His own words at any rate make it clear that he knew them very well. Ardent Protestant though he was, he had not disdained to turn over the *Asotus* of the staunch Catholic Macropedius, nor the *Christus Xylonicus* of Barpholomaeus Lochiensis<sup>3</sup>. The *Christus Triumphans* does not

*The  
Christus  
Trium-  
phans,  
1556.*<sup>2</sup>

<sup>1</sup> Bale *Catalogus*, 1556, sub nom. *Foxus*.

<sup>2</sup> The *Christus Triumphans* was translated into French 1562 (Genève, Jean Bienvenu), and into English by John Day, 1579: late in the seventeenth century (1672 and 1676) two editions of a reprint of it followed edited by 'T. C.' M.A. of Sidney Sussex College, and dedicated to use in schools 'ob insignem styli elegantiam,' a distinction which did it rather more than justice. Foxe's original ms. exists in the British Museum (Lansd. 1073); the most interesting of the corrections which abound throughout are those which show that Foxe had originally chosen different names for several of his characters. In the first draft Nomocrates was called *Dicalogus*, Adopylus (servus) *Dromo*, and Diocetes at one time *Machonomus*, at another *Abadon*.

<sup>3</sup> Cf. the Preface to his play, where he asserts that in the '*Asotus reliquisque doctissimae Germaniae comoediis*,' the chief purpose is satire of human faults and vices. The singular term *Xylonicus*, used of Christ by Foxe, was apparently invented by Barpholomaeus. He says in the preface (*ad pium lectorem*), that he has devised the title 'quod Christus ἐν ξύλῳ, id est in ligno, positus sit νίκη, id est victoria.'

however stand in direct line with anything that had preceded it. Foxe makes indeed a claim to entire originality, and addresses his audience with a complacency worthy of a better poet:

Silentium rogat  
poeta novus (novi spectatores) novam  
rem dum spectandam profert.

He aimed at no mere flagellation of particular vices such as, in his view, was the object of the *Asotus* or the *Acolastus*, nor yet at mere illustration of particular incidents in Biblical history or legend<sup>1</sup>. Even the *saeva indignatio* against the papacy did not now give the original impulse to his verse. One consequence of the Protestant identification of the Pope with Antichrist, had been to bring the second coming of Christ and the final judgment, of which Antichrist was the immediate precursor, indefinitely near. The far-off divine event became an hourly impending catastrophe. The moral earnestness of the Reformers was powerfully stimulated by this solemn foreboding. The world however, as usual, failed to realise its peril and went its way unconcerned, daily adding to its load of sins. To startle it from its indifference was the aim of the *Christus Triumphans*. 'Whosoever, writes Foxe in the preface, regards as in a mirror the affairs of men, will judge that the grain is ripe, and that the time is come for the sickle of the reaping angel. Wherefore it seemed not unmeet that I should prepare some writing wherein setting forth the perils of our time, I might inspire to the

<sup>1</sup> 'Non licuit in hoc Dramate singula vitiorum genera, atque crassiora vulgi flagitia, more veteris comoediae flagellare. Id enim in Asoto, reliquisque doctissimae Germaniae comoediis, tum potissimum in concionibus quotidianis, ...abunde est praestitum.'—Foxe, *ad pium lectorem*.

greater contempt for this life, and regard for that to come.' For this purpose, he took up the most authoritative document of modern history known to the Reformers. 'It sufficed, he observes, simply to follow the Apocalyptic story, transferring to the stage just so much of it as bore upon the affairs of the Church.' We shall see however that this was by no means an adequate account of the scope of the *Christus Triumphans*.

Though divided into five acts, the drama falls more *Its Plot.* easily into three divisions, corresponding to the three times of trial through which the ideal Church had passed. They are represented by three tyrants, Nomocrates, the Jewish law, Diocetes the Roman persecutor, Pseudamnus the papal Antichrist. In the first scene Eve appears mourning for her children, Psyche and Soma, who at the command of Nomocrates, are languishing in confinement, the one in Orcus, the other guarded by the lictor Thanatos. But her lamentations are interrupted by a confused noise above and Satan is seen falling headlong; while shortly afterwards 'Christus redivivus' appears leading Psyche out of her captivity.

The second and third acts represent the age of persecution. Nomocrates and his allies, the priest and scribe, are joined by Diocetes the deputy of captive Satan, who calls out the ten Caesars to his work. Ecclesia appears, like Eve before her, lamenting the loss of her three children, Europe, Asia, Africa, whom Peter and Paul finally release from the bondage of Nomocrates. The fourth act carries us on with breathless speed. In the first scene the accession of Constantine terminates the tyranny of Diocetes; but the good news is scarcely announced when we meet with Ecclesia disturbed as she meditates on the 'halcyon days' she has enjoyed since

Diocetes fell, by the noise which announces Satan's release from the pit. He unites himself with the Pope, 'Pseudamnus,' and instructs him how to subdue the world with the 'Circean cups' of luxury. The sons of Ecclesia are easily won over with honours and high-sounding titles, 'Fidei defensor, rex christianissimus' &c., while Pseudamnus himself intrigues with the courtesan Pornapolis,—Foxe's symbol for the eternal City. But their triumph is soon disturbed by the gathering signs of the Reformation. Ecclesia falls into their hands, and mortifies them by her persistent denial of the claim of Pornapolis to be Ecclesia. She is rapidly despatched to Bedlam, but in the next scene Satan himself with his lictors overhears one Hierologus explaining to Europus that Pseudamnus is Antichrist, and Pornapolis *meretrix Apocalyptica*. They are convulsed with fury, and fall upon the bold preacher, who takes to flight. The lictor Psycheponus pursues him, and presently returns with a startling narrative of moving accidents. He tells how he had been rapt, as he thought, into Purgatory, where he found Scotus and Aquinas lashing themselves in rage at the universal neglect of the Mass; how at the same moment a countless host of heretics were seen quenching the fire of Purgatory with oceans of water, and how lastly he had pursued the heretic *Hierologus*, the ally of Ecclesia, through the streets of a town, easily recognised as Oxford, till the fugitive took refuge in Bocardo. There he is left in fetters, with his fellow heretic, Theosebēs<sup>1</sup>.

Then Anabasis is found reporting to Pseudamnus and Pornapolis the current rumours about them. He candidly advises them to give up the game,—*'Mundus quia diu Jam oculis captus, videre cepit.'*

<sup>1</sup> Cf. Theophilus in the *Pammachius*, the Reformer with whom *Veritas* was to find refuge.

Pseudamnus attempts to put off the charge: 'tis quite certain, he urges, that the Turk is the Beast.' So I told them, replies Anabasis, but they are keen heads, and they made it clear that what is foretold of the Beast does not apply to the Turk. Pseudamnus accepts the conclusion with phlegmatic indifference, but Pornapolis sinks fainting to the ground, with the weight of a mill-stone at her heart, begs that doctors 'quantum potest' may be immediately summoned, and is borne off the scene, supported by Pseudamnus and Anabasis. After this scene of grim theological comedy, the end rapidly closes in. Africus and Europus,—England and France—are reunited (somewhat prematurely in the latter case) to their mother, and she herself arrayed in her bridal robes, and attended by the chorus of virgins, listens to an Epithalamian hymn which hints not obscurely that the divine bridal 'is not long.'

Crowded with unnecessary figures, confused in structure, unimaginative in conception, and alternately undignified and pedantic in style, Foxe's 'Apocalyptic drama' was far from being comparable with the best of those *doctissimæ Germaniæ comoediæ* whose example he had somewhat ostentatiously set aside. The difficulty of converting the visionary and loosely connected imagery of the Apocalypse into a compact and ordered drama was of course immense, even with all the new suggestions supplied by the Protestant reading of it, and Foxe struggles visibly in the toils. But was his work so independent of previous dramatists as he professed? On the contrary, he owed if not the original suggestion, yet some hints in the execution, to the more remarkable writer who had handled the Apocalypse before him. The *Pammachius*, as we have seen, was in no sense, like the *Christus Triumphans*, an attempt

*Comparison with the Pammachius.*

to 'versify the Apocalypse'; but it derived from it, and particularly from the mediaeval development of the legend, much of the groundwork of its story, some telling situations, and several characters. Naogeorg had not, like Foxe, begun *ab ovo*. The first coming of Christ and the beginning of the thousand years, the allegory of Eve and her children, the Jewish scribes and priests, the conversion of Paul, and similar extraneous matter with which Foxe encumbered the course of his drama, lay equally outside his scope. On the other hand, he had introduced a novel and piquant element in the Reformation. The allegoric figure of Ecclesia, of whom Foxe vainly strove to make a tragic heroine, a Hecuba mourning for her children,—is reproduced with much more originality in the banished Veritas and her talkative hand-maid Parrhesia; entirely original are the final despatch of Veritas from the refuge she has sought with Christ, to the Wittenberg teacher Theophilus, and the vigorous picture which follows of the infernal court startled from its easy slumbers by the news.

Although Foxe throughout kept far closer to the original, he shared too intensely the polemical bias of Naogeorg to escape the influence of his far superior dramatic skill<sup>1</sup>.

The appearance of Satan, for instance, after being 'unloosed,' has several traits in common. In Naogeorg Veritas, in Foxe Ecclesia hastily take to flight from his presence. His allies are more slow to arrive, and he grows impatient at the neglect.

<sup>1</sup> It is worth noting that the notorious performance of the *Pammachius* at Christ's, and the subsequent inquisition, which can scarcely have been unknown at the sister University, occurred a few months before Foxe's expulsion from Magdalen,—when he was already in the throes of conversion.

Sed ubi primum meos quaeram vicarios?  
 Quid agant miror, quod non ut semper hactenus  
 Quotidiana ad me regni gesta perferunt<sup>1</sup>.

His scout Dromo emphasises this in lacquey fashion:

Vicariis magna hercle sunt negotia  
 Hodie, ut non possint convenire principem, &c.

Similarly, in Foxe, Satan breaks forth exultingly:

Salutem atque benedictionem Acheronticam  
 Quotquot sitis,—

but suddenly stops in amazement:—

At quid hoc? proh portas inferi,  
 Itan' nemo gratatum huc provolat? semel  
 Nec ex vinclis salutat reducem? Populus hic  
 Friget. Vide, absentia quid facit<sup>2</sup>!

Again, the effective, though nowise Apocalyptical, scene in which Parrhesia listens to the diabolical plans of Pammachius and his ally Porphyrius, and through native incapacity for sagacious silence, breaks into irrepressible indignation, is roughly handled and rudely dismissed,—forms the most natural starting-point for the equally effective scene in which Ecclesia is caught by Pseudam-nus (the Foxian Pammachius), Pornapolis, and the lictor Psycheponus. Ecclesia is seen lurking behind. 'Take care she does not betray us.' They angrily ques-tion her:

  heus mulier sodes  
 Quae sis? *EC.* Ecclesiae equidem nomen fero. *PS.* Proh  
   anathema. *POR.* Audin' hanc?  
*PS.* Haeretica.....Schismatica.....Wyclevista.....Anabap-  
   tistica<sup>3</sup>.

<sup>1</sup> *Pammach.* II. I.

<sup>2</sup> *Chr. Tri.* IV. 4.

<sup>3</sup> *Chr. Tri.* IV. 8. Cf. *Pam.* p. 420.

She stoutly maintains that she is the true church, and finally, as has been said, is despatched by Pseudamnus 'ad Bethlemitas.'

Parrhesia it is true at first affects neutrality, and some humour is shown in her spasmodic efforts to maintain it<sup>1</sup>: but her spontaneous outbursts are as unequivocally hostile as those of Ecclesia herself, and far more vivacious.

Ha, ha, ha, perelegans illuminatio

she exclaims, at the suggestion that the pope is arrayed in gold and purple

ut quasi sol omnes illuminet ecclesias:

and when the arrogance of Pammachius culminates in a comparison of himself with S. Peter, she loses all self-control:

Vah homines impii, summum mundi caput  
Pedibus conculcant: te deus piaculum  
Exterminet, ut illudis hominibus et deo.

PAM. Ejice mox mulierem multatam pessime,  
Os collinito stercore, vel si mavis luto.

PAR. Quin mittis me pessime, tuasque res agis?  
Heu etiam verberat, et faciem pingit luto...

POR. Abi in malam rem haeretica Wiclevitica.

The two salient points in the story, which it was part of the originality of the *Pammachius* to have combined, viz. the release of Satan, with the resulting development

<sup>1</sup> PAR. (*aside*). Num hic est Satanae regnum? POR. Quid ais? PAR. Nil equidem,  
Sed tussiebam.

And after a more irritating explosion:

PAM. Quin  
Extrahas hanc mulierem per capillos Porphyri,  
Pugnis in os ingestis? PAR. Sanctissime pater,  
Meae loquacitati des veniam obsecro.  
Magis ero muta quam piscis, &c.

of papacy, and the first shock given to his power by the Reformation, are certainly treated with much difference in detail, but the common contour is unmistakable. The infernal council of Satan and his vicars, the distribution of functions,—war, persecution, corrupt doctrine, vice, luxury<sup>1</sup>; the stupefied amazement with which they learn the news of the Reformation,

SA. Audis haec Pammachi? PA. Oh totus ardeo  
Iracundia, et animi perplexitate—

the appearance of the reformed teachers<sup>2</sup>; the angry interrogations about their doctrine; lastly the dramatic *aposiopesis* by which the 'divine event,' the second coming of Christ, towards which the whole drama appears to 'move' as its inevitable catastrophe, is finally withheld;—Naogeorg cutting short the action at the fourth act, and warning his readers that 'Christ in his own day would play the fifth,' Foxe hinting even more emphatically by the bride already arrayed and the marriage hymn already sung, at the imminent coming of the heavenly bridegroom:—all these analogies in the two

<sup>1</sup> The council in the *Chr. Tr.* (IV. 4) corresponds more closely with the final council of the *Pammachius* (IV. 5).

<sup>2</sup> In the *Pammachius* we hear of 'Theophilus,' the doctor of Wittenberg, with whom Veritas finds refuge; in the *Chr. Tri.* of 'Hierologus' and 'Theosebcs.' The former, like Luther himself, suffers merely threats at the pope's hands,—

Si

Quis Veritatem mihi jam et Paulum traderet,  
Simul ét *doctorem illum scelestum*, in temporis  
Puncto cum ipsis omnes vorarem vestibus, &c.

It was natural that an English exile in 1556 should insinuate that this pious wish had not been wholly ungratified; and that Hierologus and Theosebcs should be consigned to languish in the Oxford prison from which Ridley and Latimer had just been released by death.

dramas, yield a strong presumption that the younger writer, in spite of his silence, owed much of the form of his 'unprecedented drama' to the greater artist and equally fervid theologian who had led the way.

The German exile ended, and with it ended also the Exile-literature of which Foxe and Bale were the chief luminaries, an unlovely passage of English letters which is nevertheless not without a sort of ghastly fascination of its own. The Return was the beginning of a period in which England rapidly acquired strength and prosperity, while Protestantism more gradually assimilated the worldly graces, the genial culture, the bold and brilliant imagination of which it had been incapable in the first fever of youth. The first two decades of Elizabeth's reign were in this respect a time of transition. Literature still dealt largely in theological *motifs* but with a less dominantly polemical purpose. The religious drama particularly entered upon a phase not precisely paralleled before or after, and which served to mediate between the Catholic Mysteries and the Protestant polemical plays on the one hand, and the artistic secular drama of the next generation on the other. The opening of the reign is marked by a little group of plays in which the literary charm of the Parables of the New Testament, and of the many exquisite episodes in the Old which lie somewhat off the main highway of Jewish history, seems suddenly to have borne fruit. The Mysteries had passed at a bound from Moses to Christ, and the Parables lay naturally quite outside their plan. Now for the first time the rich dramatic material of the books of Daniel, Esdras and Esther, is utilised in such pieces as the *Enterlude of the story of Kyng Daryus* (1565), the *Enterlude of Godly*

*Queene Hester*<sup>1</sup> (1561) and the *playe of Susanna*<sup>2</sup> (1568); while the parable of the Prodigal<sup>3</sup> was the basis of a play of which distinct traces are only apparent at a much later time<sup>4</sup>.

Distinctly less remote than the authors of these crude pieces from the creators of the mature secular drama, wavering indeed visibly between the beautiful profanities of Italy and the austere ideal of the Calvinist preacher, is a young poet of the middle of Elizabeth's reign, whose work, almost by an anachronism, forms a last link in the series of English religious dramas which drew some part of their inspiration from the great German treasury of 'holy plays.' A brief notice of it will therefore naturally conclude the present chapter.

## V.

George Gascoigne is a familiar figure in the generation which preceded Shakspeare's. His *Iocasta* was the

GAS-  
COIGNE:  
*The Glasse  
of Govern-  
ment,*  
1575<sup>5</sup>.

<sup>1</sup> This seems to stand in no relation to the *Comoedia von der Königin Hester* of the English Comedians.

<sup>2</sup> Sta. Reg. 1568-9. Extant in the last century.

<sup>3</sup> Sta. Reg. 1565-6. Perhaps the play of which a few fragments survive in the *Histrionastix*. It is scarcely likely to have been the original of the English Comedians' *Comoedia von dem Verlorenen Sohn*.

<sup>4</sup> It is a natural suggestion that this group of biblical genre dramas owed something to an acquaintance with the numerous plays of the same class which a fugitive in Germany must inevitably have met with wherever he went. But comparison, in the few cases where it is possible, shows that this influence can at most have affected the choice of subject. The rude *Darius*, for instance, is almost as unlike the elaborate *Zorobabel* of Birck as is possible for two plays upon the same story to be.

<sup>5</sup> The substance of this section has already appeared in the *Englische Studien*, Jan. 1886.

first tolerable translation of a Greek play, and the first attempt to follow up the classical path opened by *Gorboduc*. His *Supposes*, the first successful adaptation of an Italian comedy, is immortalised by a notable plagiarism of Shakspeare, who used a considerable part of its daintily artificial scenery to relieve the robust naturalism of his *Shrew*, a Frank Hals with a background by Moeris. On the other hand, his single original comedy, the first fruits of the 'regeneration' of the once worldly poet, has enjoyed only a *succès d'estime* in comparison with either the *Steele Glasse* which adorns a later and less severe stage of his repentance, or his juvenile and rather frivolous *Posie*. Yet, as Mr Hazlitt truly says (*Gascoigne's Works*, Roxb. ed., *Introduction*), *The Glasse of Government* stands absolutely alone in the English dramatic literature of the century; and he professes himself unable to throw any further light upon it than is implied in a very general reference to ancient comedy. Under such circumstances, the slight suggestions which I have to offer appear to need no apology.

The *Glasse of Government* was first printed in 1575, and (in spite of Mr Arber, who in his introduction to the *Steele Glasse* antedates the Dedication by just ten years) certainly written not long before. It is a 'tragical comedy' in five acts, and in prose. Two Antwerp burghers, Phylopaes and Phylocalus, have each two sons, the elder in both cases of the kindred of the Prodigal son, while the younger are exemplary youths of an unreal type. Anxious for their welfare, the two fathers seek out a wise and godly teacher, one Gnomaticus, whose discourses, very unequally composed of classics and of the teaching which Aristotle thought unwholesome for young men, occupy much of the first two acts. Unfortunately, Phylautus and Phylosarchus, the two elder

sons, who learn the lesson soonest, are the first to forget it. The temptations of the town are let loose upon them in the person of a fascinating parasite, Eccho, who, after obtaining a holiday for them on the pretext of an invitation from the 'Markgrave,' introduces Phylosarchus to a local Cressida called Lamia, and her 'aunt' Pandarina<sup>1</sup>. And so, while the younger brothers are laboriously pursuing rhymes for a verse composition on Duty, Phylosarchus is already in the toils of the *meretrix*. The adventure soon comes to the ears of the two fathers, who anxiously take counsel with Gnomaticus. He advises that they shall be sent at once without warning to the neighbouring university of Douay. A sumptuous meal prepared for them at Lamia's house accordingly awaits them in vain, and the parasite and his crew are arrested by order of the Markgrave. Presently arrives a report from Douay to the effect that the 'Prodigals' have only changed the scene of their amours. Crime is added to vice, the plot thickens with increasing rapidity, months of action are crowded into minutes of narrative. Finally, while Eccho is still awaiting sentence, news arrives that the two incorrigibles have met their reward. Both in fact have fallen into hands not accustomed to pardon or indulge: Phylosarchus having been flogged for fornication in the city of Calvin; and his brother executed for murder in Calvinist Heidelberg. The two younger sons meantime, by a coincidence not infrequent in stories of this type, have reached distinction and influence in the same quarters;—the one as a minister at Geneva, the other as secretary to the Palsgrave.

Where are we to look for the origin of this singular

<sup>1</sup> This name, as Professor Ward observes to me, shows that the proper name was already understood in its *common* sense.

plot, with its pronounced didactic vein, its acute ethical contrasts, its rapid alternation of school and tavern scenes, its bold development of character in opposite directions? Doubtless, as Mr Hazlitt says, a certain element of it, especially the whole machinery of the *parasite* and *meretrix*, might be paralleled from Latin comedy.

But there are two peculiarities in its use of these Roman situations. There is an obvious attempt (1) to combine with them a pronounced Christian moral; and (2) to associate them with the life of a modern university. For these much closer parallels can I think be found elsewhere. To make this clear it will be necessary to resume a thread already briefly handled in the first section,—the dramas of the ‘Prodigal Son.’

*The Prodigal Son.*

Unknown to the dramatic repertory of the Middle Age, all but unknown to that of France and England throughout the sixteenth century<sup>1</sup>, the most finished of the parables had in Germany a vogue to which no other subject in literature approached. The variety of treatment displayed in the score or more of recorded versions of it<sup>2</sup> shows on how many sides the subject was congenial to the national mind. No other so effectively combined qualities which appealed to the Humanist with those

<sup>1</sup> The only example earlier than the *Acolastus* is Ravisius Textor’s so-called ‘dialogue’ *de filio prodigo* (Paris, c. 1510), which is quite differently treated. The Prodigal is the heir of a miserly father, whose death gives him the first opportunity to deserve his name. There is accordingly no question of a return and forgiveness. The first known edition of Textor is 1536.

<sup>2</sup> Cf. on the whole subject: Holstein: *Das Drama vom Verlorenen Sohn*, 1880. An exact number cannot be given, as this class shades off by indefinite degrees into others. Several moreover are only surmised from their titles. A drama of similar tendency by Busslebius (1568) is described by Holstein *Archiv f. Litt. Gesch.* 10, 168 ff.

which had an attraction for the Reformer. The problem of providing a 'Christian Terence' was materially lightened by the example of a plot in which a genuine Terentian intrigue led up in the happiest way to a Christian repentance and reconciliation. And, on the other hand, the nature of this reconciliation itself made the parable a capital weapon in the hands of the Protestant advocate of 'justification by faith.'

These qualities were quickly seen, and the story was seized upon, independently and almost contemporaneously, by three remarkable dramatists. With Georg. Macro-  
pedius, as a Catholic and a schoolmaster, the Humanist motive is naturally predominant; and his *Asotus*, the firstfruits of his imitation of Reuchlin, is an almost purely Terentian drama of intrigue, in which a bevy of slaves, mistresses and parasites play their familiar part about the dissolute son, and the final forgiveness is simply the conventional accompaniment of a fifth-act repentance. Nearly half the play is devoted to an attempt, in conception just, but clumsily carried out, to supply a motive for the division of the inheritance,—the absence of which is an undeniable flaw in the otherwise admirable art of the original. *Asotus* leaves his home only on the discovery of an intrigue carried on there with the aid of a slave in his father's absence. Totally different was the handling of a new convert to Luther, Burkard Waldis, and the crypto-Protestant W. Gnapheus; whose '*Parable of the Lost Son*'<sup>1</sup> and the *Acolastus*<sup>2</sup> gave the most decisive proof of the sincerity of the one and brought the most damaging suspicions upon the other. In Waldis there is no trace of classical influence<sup>3</sup>; the

<sup>1</sup> *De Parabell vam vorlorn Szohn*, Ryga, 1527 (ed. Milchsack).

<sup>2</sup> Acted 1529; printed 1534.

<sup>3</sup> He deprecates the comparison with the air of patronising

intrigues of Italian slaves and parasites are replaced by the ruder devices of the Low German boor; with little attempt to make new combinations, or to add anything to the pathetic simplicity of the original, the garrulous verse leads us tranquilly towards the climax, in which the author's entire interest is centred, and which he has spent all his resources to throw into relief, for not only is it accompanied by a long and impressive moral upon the need of justification by faith, but the whole drama is preceded by a Prologue in which the diabolical origin of the opposite doctrine is emphatically urged.

Gna-  
pheus:  
*Acolastus*,  
1529.

In a sense intermediate between the play of Macropedius and that of Waldis, the *Acolastus* of Gnapheus is superior to both. Without the structural excrescences by which Macropedius had attempted to make the plot more intelligible and Waldis to make it more edifying, it felicitously combined just as much of the classical and the biblical model as was capable of harmoniously blending. Full justice is done to the intrigue, without detriment to the intensely un-Roman *dénouement*.

Acolastus, the Prodigal, is sent by his father into the world, with the approval of a wise friend and counsellor, Eubulus. He and his like-minded companion Philantus, speedily fall in with two parasites of the astute Plautine breed, Pantolabus and Pamphagus, who with the aid of

humility habitually assumed by the journeymen of Protestant art towards the pagan masters of the ancient world. The reader is begged to excuse his simple style,

—dat unnser stilus ys szo slicht  
mit Terentio gar wenich stymbt,  
noch mit Plauto over eyn kumbt,—

and for a reason which betrays the infancy of criticism :

de wyl ydt ys keyn fabel gedicht  
sonder up de rechte warheit gericht.

a *meretrix* Lais, make short work of his purse, as of his principles. The third act paints with extraordinary vivacity a glowing love-scene with Lais. In the fourth the ruin of Acolastus is consummated: he leaves the *lupanar* houseless and penniless. The climax has already been foreshadowed, with much art, in the steady faith of the friend Eubulus, that the Prodigal will not finally be lost. 'Eum fatis totum relinquito curandum,' is his reply to the anxious forebodings of Pelargus; and the fifth act effectively though very briefly records Acolastus' return, and his forgiveness, which is seasoned with reflexions, perilously Lutheran for a professed Catholic, on the justifying virtue of faith.

From the 'Prodigal son' to the dissolute student or the truant schoolboy, is not a very difficult step, and out of dramas of the *Acolastus* type grew a series of offshoots in which the motive of the parable is applied to the society of a modern University town. The informal adviser easily became a professional pedagogue, the steady son a blameless 'reading-man'; the ordinary contrasts of bourgeois life reappeared touched with the acuter antagonisms of town and gown. I am here concerned with only two of these comedies of school life: the *Rebelles* of Macropedius, and the *Studentes* of Stymelius,—the latter a direct imitation of the *Acolastus*. School-dramas<sup>1</sup>.

The *Rebelles* is certainly far from reproducing the compassionate ethics of the parable; on the contrary, it preaches with great zest the classical Old Testament doctrine of 'spare the rod and spoil the child.' It is the satiric revenge of a genial pedagogue, accustomed to flog out of sheer goodness of heart, upon tender mothers who founded an argument against the school on the '*clunes*' Macro-pedius:  
*Rebelles*.

<sup>1</sup> On the School-dramas cf. especially Erich Schmidt's brilliant sketch, *Die Komödien vom Studentenleben*, 1881.

*liventes*' of their offspring. In the opening scene a mother laments to her plain-spoken gossip Cacologia, the cruelty of her boy's master. After mutual consultation they resolve to send him to the school of one Aristippus, with the proviso that he shall be taught *sine verbere*. A rumour of the decision reaches the boys, to their huge delight:

O deum immortalem, ut est stultissima  
materna meus, nobis tamen ut accommoda!

The result is easily foreseen. Relying on their immunity, the boys gamble behind their books, quarrel, are detected, and finally agree to escape. Then follows the characteristic intrigue of the Prodigal story. They enter an inn, procure mistresses, are cheated at play, and make their way off with empty pockets. Finding a peasant asleep with a treasure, they rob him and return to the inn, where the host receives them with open arms. But their satisfaction is brief, for two 'lictors' speedily arrive, arrest the youths, and carry them off for trial. In peril of their lives, they despatch an urgent message to the mother. In frantic haste she summons Aristippus and rushes to the court, only to find that the trial, a mere five-minutes police-case, is already over, and that the prisoners, as a warning to others, are sentenced to death. The arrival of the master, however, diverts the threatened tragedy. He begs that the punishment of his own pupils may be entrusted to him; the judge without difficulty assents, and the boys are carried off to receive what is thus ingeniously made to appear the rare favour of a sound flogging.

Stymme-  
lius:  
*Studentes*,  
1549.

The *Rebelles* was printed in 1535, the *Acolastus* in 1534. In 1549 appeared the *Studentes* of Stymmelius, a piece much inferior to either, but probably even more

widely read. It is, as I have said, a free adaptation of the *Acolastus*. Gnapheus had, somewhat perversely, neglected the telling contrast of the elder son; Stymmelius atones for this parsimony by a liberal provision of three sons and three fathers, whose divergent dispositions are paired off against one another in neat alternation like the squares of a chess-board. Eubulus, the wise friend, is now the father of the prodigal, the sordid Philargyrus of the son whose only ambition is learning, and the indulgent Philostorgus of the son for whom indulgence is poison. Deliberation of the three fathers, as usual, opens the play; followed by the despatch of the three sons to the University. They seek out a teacher, one Paideutes, who discourses unctuously of the advantages of learning. Philomathes embarks on his course; the other two speedily follow the way of Gnapheus' *Acolastus*, with the difference, no doubt a concession to a respectable audience, that he is made to wrong an honest girl instead of a professed *meretrix*. Her parents demand reparation: Eubulus, after much doubtful stroking of his beard, reluctantly consents, and lacerated morality is patched up in the approved way by a conventional marriage. The impressive repentance and forgiveness scene of Gnapheus is thus abandoned for a commonplace *dénoûment*; and the *Acolastus* must be pronounced as superior to the *Studentes* in moral weight as it is in dramatic force and vivacity.

It is needless for my present purpose to follow further either the dramas of the Prodigal Son or that special class of them devoted to the school and university prodigal. Jörg Wickram's *Junger Knaben Spiegel*, one of the cardinal works of early German Romance, is also interesting as a step in the process by which the biblical motive, steeped for awhile in the atmosphere of Terence

*Other  
'School'-  
dramas.*

and enriched, if somewhat vulgarized, by the contact, became completely assimilated to German bourgeois life. Hayneccius' *Almanzor* ('Schulteufel') is a lively picture of 'Rebels' even more incorrigible than those of Aristippus<sup>1</sup>.

*Vogue of  
German  
School-  
dramas in  
England.*

Before discussing the relation of Gascoigne's play to these three dramas, it may be well to review such external evidence as exists for his acquaintance with them. It is rarely possible in cases of this sort to bring a writer face to face with his source; to trace his steps to the very library, his hand to the very shelf, where it lay. But one may fairly be called on to show that his acquaintance with it would be exceedingly natural, that it penetrated well within his literary *milieu*.

I have already dwelt on the considerable vogue which several Latin comedies of Germany obtained in England in the course of the century. Conspicuous among those which obtained the honours of translation or reprint, were the *Acolastus* and the *Studentes*. Palsgrave's school-version of the former, the French translation, the London reprint of 1585<sup>2</sup>; the ms. copy of the latter made in 1570, the performances at Wittenberg and Christiania in 1572—3, twenty-three years after its first production, and above all the immense number of editions it went through<sup>3</sup>, leave no doubt of the European celebrity of the two plays<sup>4</sup>. Of the *Rebelles* I have met

<sup>1</sup> Wichgrevius' *Cornelius relegatus*, which I know only from Prof. Erich Schmidt's account (u. s.), is said by him to be a picture of student-life much superior to the *Studentes*.

<sup>2</sup> In the library of Trinity College, Cambridge.

<sup>3</sup> My friend Dr Joh. Bolte, of Berlin, has kindly sent me a complete list of the editions from his own collections. They number 28, from 1549 to 1662; of which 11 (Frankfurt a. d. O., Antwerp, Köln and Strassburg) appeared before 1575.

<sup>4</sup> A reminiscence of the former play is doubtless also to be

with no distinct trace in England<sup>1</sup>, where however three others of his dramas the *Andrisca*, *Bassarus* and *Hecastus* were probably known from Brylinger's collection, while his name was in any case familiar as the author of a standard treatise on letter-writing (*de conscribendis epistolis*) early reproduced in England. All three dramatists must have been well known at least by name and reputation, in the literary university circles to which Gascoigne belonged. But in 1572—3, circumstances carried him into the actual scene of the work of two of the three,—still the headquarters of the Christian Terence. He joined the prince of Orange in Holland, and, by the evidence of his own *Dulce bellum inexpertis*, found leisure for the victories of peace in the intervals of doubtful successes in the field. The Hague, Gnapheus' city, was also the home of the 'vertuous lady' whose intimacy proved so perilous to her frequent visitors<sup>2</sup>. Antwerp, where the scene of the *Glasse* is laid, he may not then have known<sup>3</sup>; but some parts of the plot, for instance the

found in S. Nicholson's *Acolastus his After-wit*, where Eubulus 'the auncient friend' (v. 705) and good counsellor, corresponds to the Prodigal's father of the same name in Gnapheus; while Acolastus himself is distinctly assimilated to the Prodigal. His mistress has played him false, and he returns, in an access of cynicism and despair, to Eubulus, who with difficulty prevents him from suicide. Cf. vv. 439 ff. where the analogy of the Prodigal is explicitly applied to the case of deluded soldiers returning home penniless, sufferers, like Acolastus himself, from the greed of gold.

Poor 'playning Prodigals, now must they wend  
Back to the country with remorse and shame;  
But wher's the feasting Father, or the friend? &c.

<sup>1</sup> Dr Bolte enumerates six editions before 1575, published at Hertogenbosch, Köln, Regensburg and Utrecht.

<sup>2</sup> Cf. *Dulce Bellum*, st. 156 ff.

<sup>3</sup> That he knew it in the year following is shown by his *The*

episode of the Markgrave, show familiarity with its institutions, and the figure of Eccho, a gay fellow 'known to all the town,' has something of the air of a portrait. Gascoigne's attested knowledge of Dutch itself involved a certain acquaintance with Dutch society and its current literature.

The external evidence then rather favours the view that Gascoigne was not a stranger to works connected by so close an affinity with his own. The degree and nature of that affinity will be obvious from the sketch already given. Distinct copy of any one of them of course it is not; it is written throughout with a different bias; it is the work of a Calvinist, not of a Catholic or of a Lutheran; it is in the vernacular, not in Latin; in prose, not in verse. For all that, however, it assuredly belongs to the same dramatic cycle; it is an attempt, that is, to connect *Terentian situations* with a *Christian moral* in a picture of *school-life*. A brief examination of the play shows that it was written, like the *Acolastus*, with a very vivid recollection of Roman comedy. It is true that, with the majority of its modern imitators, he begins by explicitly condemning it. The play opens with this significant *avis* :

A comedie I mean for to present,  
No Terence phrase; his time and mine are twain;  
The verse that pleased a Romain's rash intent  
Might well offend the godly Preacher's vein;  
Deformed shows were then esteemed much,  
Reformed speech doth now become us best...

So too in the first lecture of Gnomaticus (i. 4), we are warned that 'though out of Terence may be gathered many moral instructions among the rest of his

*Spoyle of Antwerpe* ('faithfully reported by a true Englishman who was present at the same') 1576.

wanton discourses, yet the true Christian must direct his steps by the infallible rule of God's word.' Another criticism occurs in II. 2.

On the other hand, this depreciation had definite limits. He could not only quote approvingly the profane poet's 'moral instructions':—'let shame of sin thy children's bridle be, And spur them forth, with bounty wisely used. So Terence taught, whose lore is not refused,'—but he can adopt his slippery situations and characters with as little compunction as the author of the *Acolastus* himself. He does so, however, like Gnapheus, with a 'godly' purpose, though one sufficiently unlike his. The dissipations of Acolastus serve to emphasise the beauty of forgiveness; those of the 'Rebelles' to strengthen the cause of rigorous discipline; those of Gascoigne's Phylosarchus to illustrate the time-honoured texts (suggested by the piety of his publisher): Fear God, honour thy parents. Still more than in Macrope-dius, the merciful climax of the parable vanishes, and is replaced by the stringent severity of Geneva and Heidelberg, where the final scenes of the prodigals appropriately take place. It may be noted that in the only other English Version of the Prodigal Son story of which we know anything in detail,—Thomas Ingleland's *The Disobedient Child*,—the solution of the parable is still more pointedly put aside: the prodigal actually returns to his father, but instead of receiving a lavish welcome, is with difficulty allowed a temporary refuge in his 'old home'.

Assuming then that the *Glasse* comes evidently under the general category of the Christian Terence, I proceed

<sup>1</sup> A more distant parallel to the Prodigal Story occurs in Woode's *Conflict of Conscience*, with an equally emphatic Calvinist moral.

to examine in detail its relation to the three plays which further agree with it in applying this motive to the domain of *Studentenleben*. This will most conveniently be done by a summary.

I. *A pair of 'prodigals' is contrasted with one or more steady and industrious students*:—(thus, in *G. of G.*, Phyllosarchus and Phylautus with Phylotimus and Phylomus; in *Ac.* Acolastus and Philautus with the elder brother, a *persona muta*; in *Stud.* Acolastus and Acrates with Philomathes. In *Reb.* the two schoolboys have no foil).

II. *Parents, or parent and counsellor, discuss the problem of their son's education*:—(in *G. of G.* the two fathers, in the *Ac.* the father and counsellor, in *Stud.* the three fathers, in *Reb.* the two mothers).

III. *Choice of a teacher, interview and arrangement with him*:—(in *G. of G.* the two fathers agree with Gnomaticus; in *Reb.* the mothers with Aristippus; in *Stud.* Philomathes with Paideutes).

IV. *'Prodigals' leave their studies and involve themselves in vice, gambling and crime*:—(in *G. of G.* Phyllosarchus is beguiled by Eccho and Lamia, in *Ac.* Acolastus by Pamphagus and Lais; in *Stud.* Acolastus by Colax and Deleasthisa; in *Reb.* the two schoolboys, who also inquire for 'Veneres,' by their host).

V. *Anxious consultation of parents*:—(in *Ac.* this occurs after Acolastus' prolonged absence; in *Reb.* on the news of the prodigals' disappearance from school; in *G. of G.* both after the detection of the Eccho and Lamia plot, and on the news of similar *faux pas* at Douay).

VI. *Disgrace of the prodigals*. The different moral and theological bias of the four dramatists led them to

handle this point with great independence: but none wholly excluded it. In the *Ac.* it is finally resolved into repentance and pardon; in the *Stud.* into wedded respectability; in the *Reb.* it is qualified by the substitution of the scholastic birch for the judicial axe. In Gascoigne alone, the 'wages of sin' are exacted to the full in the stern spirit of Calvin.

If I am not deceived then, there are plausible grounds for supposing that one of the most respectable pioneers of the great age of the English drama stood for a moment in literary contact with the most original Latin dramatists of the previous generation; that he met with their writings either in England, where they were in any case known by repute, or during the Dutch journey which immediately preceded the writing of his own play; and that he learned from them what no Roman or English dramatist could then have taught him,—the idea of a 'Glass of Government' in which the unsavoury world of Roman comedy is boldly adopted with a Christian purpose, while the story of the biblical Prodigal is worked out, much enlarged and still more extensively 'amended' in the sphere of the modern school.

With Gascoigne properly closes the discussion not only of the Latin drama, but of the entire *genre* of *theological belles-lettres* of which it was the most conspicuous class, and which the Reformation, comparatively barren elsewhere, produced with prolific energy in the country of its birth. Still in the vigour of manhood when Marlowe and Decker were at school, Calvinist 'by grace,' but a true 'Elizabethan' by nature, Gascoigne is as it were the meeting-point of the literature represented by the *Acolastus* and the *Pammachius*, and that other, not less vast or original, which is represented by *Faustus* and *Fortunatus*, by tales of magicians and

---

witches, of fools and rogues, of Grobians and Owlglasses; a literature not, like the former, essentially composed of Christian materials, and called to life under a Christian inspiration, but a genuine and characteristic creation of the Teutonic genius,—a heap of fantastic and uncouth shapes, permeated and tinged no doubt at every point by Christian emotion, but in fundamental structure disclosing, unalloyed, the very native stuff of genial, lawless, untameable human nature.

## PART II.

### CHAPTER IV.

#### THE FAUSTUS CYCLE.

No national reputation probably has ever undergone a greater change than that of Germany between the middle and the end of the sixteenth century among its English neighbours. To the average contemporary of bishop Bale, and to the average contemporary of Jonson or Fletcher, the name had quite different associations. To the one Germany was the mother-country of the Reformation, the refuge of the persecuted Protestants, the seat of literary accomplishments and civic splendour which England could at the most barely rival. To the other, probably enough, it was famous only as a land of magicians and conjurers, as the home of Albertus and Agrippa, Paracelsus, Tritheim, and Doctor Faust<sup>1</sup>. It

<sup>1</sup> All, especially Paracelsus, are very frequently alluded to in the dramatists, for whom Paracelsus shares with Faust the position of the typical conjurer. Cf. e.g. Jonson, *Volpone* II. 1 (Nano's song—'Paracelsus with his long sword'), *Epicoene* IV. 2 (*Ep.* 'Servant, you have read Pliny and Paracelsus, ne'er a word now to comfort a poor gentlewoman?') Cf. *Alchemist* II. 1; Glapthorne, *Hollander* III. 1; Fletcher, *The Fair Maid of the Inn* IV. 2 ('Were Paracelsus the German now living, he [Forobosco] would take up his single rapier against his terrible long sword'). Of Agrippa's fame the most notable evidence is Nash's well-known invention in *Pierce*

added a new fascination to the 'most wicked sorcerer' to be a German; nor was there any better advertisement for a tale of wonder than to be 'translated from the hye Almain.' Among the Jacobean dramatists, Germany is as inseparably associated with magic as Holland with 'butter,' and Spain with arrogant manners. 'Wert not better [to follow the court fashion],' asks Thorowgood in Glapthorne, of the bookworm Holdfast, 'then to walke like Faustus or some high German conjurer, in a cap fit for a costermonger<sup>1</sup>.' In the *Alchemist*, Heidelberg is a typical seat of alchemy, and a learned astrologer is called the 'high almanac of Germany.' The 'juggler with a long name' whose services are desiderated in the *Magnetic Lady* is appropriately called Travitante Tudesco (Tedesco)<sup>2</sup>, and the association is only slightly different in the boast of the 'upstart gallant' Fulgoso in *The Lady's Trial*, that his mother was a 'harlequin,'

In right of whose blood I must ever honour  
The lower Germany<sup>3</sup>.

*Penniless*, where Surrey sees the fair Geraldine in the magician's glass. He is also one of the traditional masters of Faust (*D. Faustus* Sc. 1); cf. Jonson's notes to the *Masque of Queens* and *Newes from the New World*. Trithem's magical fame in his own day did not suffer from the comparative inaccessibility of his magical writings; but their publication in the next century gave it a stimulus. Cf. Cartwright, *The Ordinary*, III. 5,

It would lay a devil  
Sooner than all Trithemius' charms.

<sup>1</sup> Glapthorne, *Wit in a Constable* (1639), I. 1.

<sup>2</sup> *Magn. Lady*, I. 1. Boy (to Damplay, who has declared that 'there be of the people that will expect miracles, and more than miracles, from this pen'), 'Do they think this pen can juggle? I would we had Hokospokos for 'em, your people, or Travitante Tudesco.'

<sup>3</sup> Ford, *The Lady's Trial*, IV. 2.

The very language is regarded as peculiarly suitable for magical observations. 'In what language shall 's conjure in?' asks Forobosco in Fletcher's *Fair Maid*. 'High Dutch I think, that's full in the mouth<sup>1</sup>.'

And while this half humorous association gained ground, the serious prestige of Germany, the half filial reverence for her as a mother of learning and true religion, had almost vanished. The mutual relation of the two countries was in fact essentially altered. In nearly all the essentials of civilisation, Germany had steadily lost ground, while England had made a gigantic stride. In political development, in foreign enterprise, in literary brilliance, even in the wealth and size of her cities, Germany hardly entered the lists with England. Protestantism itself was become not less an English than a German institution; the former colony of the new faith was now its most independent stronghold<sup>2</sup>.

<sup>1</sup> Sir Epicure Mammon's library contained a work by Adam 'on the philosopher's stone in High Dutch'; *Alch.* II. 1), but the allusion is here doubtless to Becarus' well known theory about the language of Paradise, which comes in for a good deal of dramatic satire elsewhere (e.g. in Glapthorne's *The Hollander* II. 1, where the hero is called 'yon bird of Paradise, yon parcell Dutch,' and Sconce's remark in the same play (I. 94), 'like a Turke he answered me that all Hollanders were *Fewes*'). Jonson's spelling of such a name as *Hohenhein*, seems to show, what is not to be taken for granted in a man of his vast and curious erudition, that he was not acquainted with German.

<sup>2</sup> Among the accessory causes of the literary alienation of the two countries was, as Prof. Ward observes to me, the almost total abstention of Germany from the religious wars of the latter part of the century, which so deeply interested Englishmen. The vast majority of the German residents in England, moreover, who might well have been the medium of literary intercourse, belonged, far more exclusively than even at present, to the commercial class.

*Neglect of  
German  
History.*

Hence the almost complete neglect, as a serious study, of German political history; a neglect exceptional even in an age, like that of Elizabeth, very little prone to foreign history in general. An enthusiastic traveller had produced an account of Italy, admirable for its time, though apparently standing alone<sup>1</sup>; the translated Froisart and, later, the translated and continued Commines<sup>2</sup>, went some way towards a history of France; the history of the Turks—a perfectly ‘safe’ subject in every European book-market in the sixteenth century—was familiar, long before Knowles, from T. Newton’s *Curio*<sup>3</sup>, to say nothing of the vivid light which had been diffused about certain episodes in it, such as the fall of Bajazet, by Greek and Italian, Spanish and German pens, from Poggio and Chalcocondylas to Spiessheimer (Cuspinianus), Paolo Giovio and Mexia<sup>4</sup>. But the history of Germany, as such, had as yet occupied neither any English historian nor any English translator<sup>5</sup>. It was indeed necessarily included in general history, and so in such chronicles as that compiled by Lanquet and continued after his death by Cooper<sup>6</sup>; as well as, of course, in the Chronicles of Carion continued by Fulk, and translated by the industrious

<sup>1</sup> Thomas, *The Historie of Italie*, 1549.

<sup>2</sup> *The Historie of P. de Commines*, 1601.—A continuation of the *Historie from...where Comines endeth, till the death of Henry the Second*, 1600.

<sup>3</sup> *A notable Historie of the Saracens...drawen out of A Curio, &c.*, 1575.

<sup>4</sup> On the sources of the English treatments of this episode, cf. *The Academy*, Vol. 24, 265 f.

<sup>5</sup> Controversial pamphlets like Barlow’s dialogue on the *Origin of these Lutheran heresies*, and narratives immediately suggested by personal experience, like Ascham’s account of the State of Germany, are exceptions which prove the rule.

<sup>6</sup> *An epitome of cronicles, &c.*, 1549.

Walter Lynne<sup>1</sup>; but its history was nowhere isolated and set in focus. There are scattered signs, it is true, of acquaintance with the German historians. The wonderful woodcuts of the fifteenth century compendium of history known as the *Nuremberg Chronicle* probably procured some currency for a picture of mediaeval Germany then unequalled for fulness and vigour<sup>2</sup>, and at a later date other, more genuinely local, chronicles were certainly not unknown<sup>3</sup>. But the group of scholars who, at the opening of the Humanist age, laid the foundation of German historical writing, the Bavarians Aventine and Tritelheim, and somewhat later Carion, the Swiss Tschudi and Kessler, the Rhinelanders Beatus Rhenanus and Wimpheling, the North German Albertus Krantz, can have been known at most to a mere handful of Englishmen. No one, probably, had the opportunity of being arrested by the story of Tell in Tschudi, on which his own country already possessed a drama<sup>4</sup>; and it is likely

<sup>1</sup> Carion's *Chronicle*, 1532, with the additions of Fulk up to 1550, was translated by Lynne in that year.

<sup>2</sup> Nuremberg, 1493, fol. Warton-Hazlitt, III. 233 *note*, suggest that Lyndsay may have borrowed from the cosmogony in fol. iv. [i.e. iii.] his own account in the *Dream*. I see however nothing in Schedel's language, which Lyndsay might not have found elsewhere.

<sup>3</sup> For that of Lübeck, cf. E. Howes, *Stowe's Annals*, 1631 (Sh. Soc.'s ed. of Harrison, II. 130), 'You shall understand that the citie of Paris was not paved until the year 1186, nor the citie of Lübeck in Germanie, in many years after, as appeareth by their severall chronicles.' As the capital of the Hanse Lübeck was comparatively familiar. Chettle's *Hoffman*, 1600, shows some geographical knowledge of its site. A 'Marquis of Lübeck' occurs in *Fair Em*.

<sup>4</sup> *Eyn hüpsch und lustig Spyl...von dem frommen und ersten Eydgrossen Wilhelm Thellen*. By Jacob Ruof of Zurich. It was originally performed at Ury—'dem löblichen Ort der Eydgnoschaft'—and printed in 1545.—Goed. p. 302.

to have been without the knowledge of an alternative that Shakspeare immortalised the Hamlet legend of the credulous Saxo instead of that of the later Danish historian, who so severely chastises the old chronicler, and who was used by Sachs for his *Historie* on the subject. And in so far as the German historians were read, it was mostly for other purposes than to illustrate the history of Germany. Holinshed explores Aventine and Krantz for the sake of his English chronicle; Reginald Scot for stories of sorcery; Thomas Heywood for anecdotes of eminent women; and Beatus Rhenanus' annals of his native land served only to inspire John Leland's history of his own<sup>1</sup>. The name of Tritheim was familiar enough, but it was a writer on occult arts and occult writing, not a historian, who was currently associated with it<sup>2</sup>. In the latter part of the century, Münster's admirable *Cosmography*, which contained one of the best histories of Germany then extant, was extracted only for its 'strange stories'<sup>3</sup>, or its account of remote parts of the world; while a German historian who in European fame ranked still higher than Münster, Philippson of Schleida (Slei-

<sup>1</sup> Cf. his laudatory epigram :

Quantum Rhenano debet Germania docto,  
tantum debebit terra Brytanna mihi.  
Ille suae gentis ritus et nomina prisca,  
aestivo fecit lucidiora die;  
ipse antiquarum rerum quoque magnus amator  
ornabo patriae lumina clara meae....

Quoted by Bale *Cent.* sub nom. Leland.

<sup>2</sup> Notwithstanding that his occult writings were first published in the following century.

<sup>3</sup> *A Briefe Collection and compendious extract of strange and memorable things, gathered out of the Cosmographie of S. Munster, 1572.* Other Englishmen extracted his descriptions of Muscovy, India, and Scandinavia.

danus), is significantly celebrated by Sir J. Elyot in an often quoted line—equally remarkable in prosody and sense—for his services to that native tongue in which he did not write<sup>1</sup>.

The same indifference to the political history of Germany is reflected still more completely, as might be expected, in the drama. The score or so of early plays which profess to be founded on German history, treat it with an open contempt much beyond what is demanded by the most exclusive pursuit of scenic effect. Historic truth is not subordinated to dramatic truth, but simply ignored. It is not merely that, as in Shakspeare's Histories, incidents are rearranged, times and places altered, characters differently conceived, but that the whole action, scenery and *personnel* are transformed beyond recognition. There is not the faintest sign that any dramatist studied a German chronicle<sup>2</sup> as Barnes, for instance, studied Guicciardini for his *Divel's Charter*, or as Marlowe studied the contemporary reports for his *Massacre*, Fletcher for his *Barneveldt*<sup>3</sup>, and Chapman for his great French tragedies of Biron and Bussy d'Amboise<sup>4</sup>. Nay Chapman himself, if it was he, abandoned his relatively refined and even minute manner of painting

*Dramas on  
German  
History.*

<sup>1</sup> 'Et le gentil Sleidan refait l'Allemand.' Sonnet prefixed to *Perimedes*, 1588. Cf. on Schleidan's writings, H. Baumgarten, *Sleidans Leben und Briefwechsel*.

<sup>2</sup> Prof. Ward has remarked (II. 388) on this reticence in as far as regards the Thirty Years' War.

<sup>3</sup> I agree with Mr Bullen, who has printed this remarkable tragedy in his *Old Plays* (vol. 2), that Fletcher had a hand in it,— 'or at least a main finger,' as Decker has it.

<sup>4</sup> No doubt Spanish history was not less completely neglected in the drama than German,—and for a more obvious reason. For the reverse side of the picture it is interesting to compare Cervantes' generally true and far from unfavourable portrait of Elizabeth in the *Española Inglesa* (the fourth of the *Novelas ejemplares*), and also

*Hector of  
Germany,  
1615.*

*Romantic  
dramas.*

in the single German drama which goes under his name. The *Alphonsus* is merely a crude and sanguinary travesty of an imperial election dispute, in which the chief interest attaches to a wholly mythical love affair<sup>1</sup>. The play is nevertheless probably the least unhistorical of the whole group. The *Hector of Germany*, professedly dealing with a contemporary of the Black Prince, is an audacious revision of the history of the fourteenth century in the spirit of the seventeenth<sup>2</sup>. The *Costlie Whore*, though it falls in a period when the war had already made Germany relatively familiar<sup>3</sup>, is nevertheless merely a combination of the legend of Hatto with a scarcely less romantic story of a duke of Saxony; Chettle's *Hoffman* lays at Lübeck the scene of a tragic story in which dukes and emperors take part, but which is a palpable coinage of the Elizabethan brain<sup>4</sup>. *Evordanus*, 1605, and *A*

Calderon's fanciful rather than fanatical caricature of Henry VIII. in *La Cisma de Inglaterra*.

<sup>1</sup> Cf. Ward II. 17, and Elze's useful edition of the play. I confess to great doubts whether it was Chapman's work.

<sup>2</sup> It was obviously inspired by the marriage festivities of 1613, the year of its composition. The action is divided between the Black Prince's adventure in aid of Pedro the Cruel (who is called 'Peter the hermit'), and an intrigue for the empire, in the course of which the Palsgrave seeks the alliance of the English king, visits England, and is entertained at festivities not greatly unlike those which welcomed his descendant.

<sup>3</sup> This is of course also the case with Glapthorne's *Albertus Wallenstein*,—a play doubtless more historical than any of those in the text; he could hardly indeed have altogether distorted contemporary events. His eye for history of such magnitude, however, is at most, that of a rough soldier.—Collier's unfortunate but not uncharacteristic suggestion that a play mentioned in Henslowe: *Albertus Galles* (1602), was likewise upon the story of Wallenstein, *Henslowe Diary* (p. 239), needs no comment.

<sup>4</sup> I offer this opinion as the result of a considerable number of hours spent, some years ago, in the vain search for its source.

*defiance to Fortune*, 1590, are romances attached in the loosest manner to German localities. The very names of the characters are foreign; the 'duke of Saxonie' is an 'Iago' in the one, an 'Andrugio' in the other. And *Measure for Measure* is an Italian story localised, but without a trace of local colouring, in the imperial residence. The emperor himself appears for a moment, but only as a shadowy presence, on the stage of *Faustus* and *Friar Bacon*; the *Wisdom of Doctor Dodypoll* (1600) and Gascoigne's *Glass of Government* (1575) treat in the same irresponsible way, the courts of Brunswick and Heidelberg<sup>1</sup>. It is clear that with these ostensible dramatisations of German themes, history had little to do, and that more than one of them owed even its semblance of German locale to the contemporary fame of one of the half dozen princes,—a duke of Brunswick, an Elector of Saxony, or a county Palatine,—whom circumstances had made familiar in England.

The German history which was really read, must be sought in a lower region of literature; in the 'strange' and 'wonderful' News which English booksellers found it to their account to translate and publish. 'Wonderful strange Newes from Germany,' was the catch-penny title of scores of leaflets, now surviving mainly in the brief references of the Stationers' Register, which traversed the whole gamut of the sensational, the marvellous, and the horrible. They are but slightly caricatured in the marvellous reports from 'Lybtzig' and elsewhere, which supply the material of Jonson's News-office<sup>2</sup>. Political history is almost entirely confined to a few reports of battles<sup>3</sup> (which after the opening of

'News'  
sheets from  
Germany.

<sup>1</sup> The former, of course, in far greater detail than the latter.

<sup>2</sup> Jonson, *The Staple of News*, III. I.

<sup>3</sup> Thus: the capture and recapture of Jula by the Turks in 1566

the great war no doubt predominate), varied, at rare intervals, by an imperial coronation<sup>1</sup>, or a court reception<sup>2</sup>. In its place we read of massacres<sup>3</sup>, and earthquakes<sup>4</sup>, storms<sup>5</sup>, executions<sup>6</sup> and apparitions<sup>7</sup>, monstrous births and bodies raised from the dead<sup>8</sup>, fasting girls<sup>9</sup> and 'damnable sorcerers'<sup>10</sup>, strange signs in the air<sup>11</sup>, prophecies in the mouth of rustics<sup>12</sup> and of sages<sup>13</sup>, visions of angels<sup>14</sup>, mysterious glimpses of the Wandering Jew<sup>15</sup>. Even in the historical dramas already discussed,

(*News from Vienna*, Aug. 5, 1566); the defeats of the Turks in Croatia in 1593, already mentioned as the subject of a ballad, in Chap. I.; the taking of Stuben-Weissenburg, (*A true relacion*, &c., Nov. 9, 1601), and the battles of the Cleves-Jülich war.

<sup>14</sup> e.g. 'Newes,' &c., of such an appearance at Druppa, 1613.

<sup>15</sup> 1612, a 'ballad' (the Wandering Jew at Hamburg).

the fragments of German material embedded in the mass of romance, are chosen from what may be called the News-sheet point of view. The iron crown which serres the skull of Hoffman, the thrilling death of Hatto, the grandiose insult put upon Barbarossa by Alexander<sup>1</sup>, even the 'Saxon' wedding-night which is put to so tragic a use in the *Alphonsus*,—only differ in their more heroic associations from the common stuff of the Elizabethan newsvendor.

The habitual 'strangeness' of the News from Ger-  
many takes a deeper tone as we pass to a branch of *Portents and Prodigies.*  
literature which is in fact merely a collection of Strange News theologically interpreted—a text full of marvels with solemn annotations at the foot. 'These are the prodigies and strange sights (studious reader), which at this time I thought good to relate,...to the end that thou mightest more plainly perceive that they were the certain prognostications of changes, revolutions and calamities, and the veritable tokens of God's wrath.' Such is the solemn language in which Conrad Lycosthenes<sup>2</sup>, the

<sup>1</sup> 'Trod on the neck of German Frederick.' This, like Bajazet's cage and chain, had evidently taken hold of the English imagination. It is pointedly referred to both in *Fortunatus* (where Barbarossa's sudden decline is one of the four instances of the power of Fortune), and in *Faustus* (ed. 1616), where Adrian quotes the exploit of his 'progenitor' as a telling precedent.

<sup>2</sup> He was at home in vast compilations. He produced a translation of the late classic Obsequens' history of Prodigies, which rivalled in popularity his own work: he also digested Erasmus' *Apophthegms* in a more convenient order. As Thomas Kirchmayer says, in a rare mood of eulogy:

Dicta olim veterum mixtim collegit Erasmus,  
unde ingens studiis prodiit utilitas:  
Olim ea Conradus nidis communibus apte  
disposuit, curis auxit et illa suis.

king of prodigy-collectors, closes his great work, the *Prodigiorum ac ostentorum chronicon*<sup>1</sup>. A quarter of a century later the English professor of theology who translated and supplemented Lycosthenes, expressed the same thought with more pregnant brevity by calling his work *The Doom*<sup>2</sup>. The collection of portents was indeed a recognised branch of Protestant work. Though of course not introduced by Protestantism, it received an immense stimulus from the fervour of Protestant piety, which, here as in some other cases, opened the way to a new superstition in the process of banishing an old. It was indeed pursued with almost equal zeal by the most rational and the most visionary of the reformed sects; the writers included Hedio the friend of Butzer, Manlius the follower of Melanchthon, Camerarius his biographer, the Swiss Lycosthenes and Jacob Ruof, and the Calvinist Batman. Nothing however could be more uncritical than their method. All the learned and all the light literature of the day was ransacked for examples; the flying sheet, the local chronicle, grave poet and solemn historian, Tritheim and Aventine, Sleidan and Krantz, Gesner and Münster, Brandt and Gengenbach,—were all made to contribute their stores. And

<sup>1</sup> Basel, 1557.

<sup>2</sup> Batman, *The Doome*, London, 1581. It is instructive to note the circumstances in which it appeared. The previous year had been marked by an unusual number of marvels. The great earthquake, recalled eleven years afterwards by Juliet's nurse, occurred on April 6. Two days later begins a stream of 'Reports' and 'Tidings,' 'Prayers,' 'Reflections,' &c., which for the whole month seem to have driven all other literature out of the field, and are still unexhausted at the end of the year. There were, in addition, earthquakes in other parts of Europe (e.g. at Rome), while an unusual number of monstrosities are recorded during November and December, in Germany. See the titles in the *Stationers' Register* for this year.

the width of range was only equalled by the perfect indiscriminateness of choice. The slightest anomaly was qualified as a portent; an accidental flaw, or even a signal excellence, in even the commonest object, at once constituted it a sign of doom. Curiosities of every kind are heaped together; comets, crosses in the sky, rains of blood, reports of misshapen infants and unusually fine game<sup>1</sup>; pretty myths like that of the Frankfurt maiden who turned everything she touched to silver, 'whereof a piece was sent to the prince and to Melanchthon,' and old stories from the days of the Basel council, like that of the nightingale which sang most sweetly to some heretical councillors as they wandered in a wood,—*'O ewig ewig wie ist das eine lange Zeit'*<sup>2</sup>,—'I judge it was a devil abiding in that place,' adds Lycosthenes, who tells the story—'and all they that were present at the conjuration fell sore sick, and shortly after died.' Such a literature naturally stimulated the diffusion of marvellous stories of every kind, and the more so as it threw the whole weight of emphasis upon their marvellousness. It resuscitated a mass of old material from sources often obscure or forgotten; and steeped them in an air of mysticism which heightened and exaggerated whatever strange element they possessed. And nowhere was it more readily welcomed and reproduced than in Protestant England.

It would have been superfluous to discuss these *The Faustus Cycle.*

<sup>1</sup> Seb. Brandt's description of a '*Hind* of notable and unaccustomed greatness given to Maximilian' in German and Latin verse, is used.

<sup>2</sup> A more illustrious 'heretical councillor,' M. Renan, has lately told us that he is accustomed to receive an anonymous warning couched in not dissimilar terms: '*Si pourtant il y avait un Enfer!*'

essentially insignificant masses of writing for their own sake. They are, however, only crude specimens of the most fruitful of all the kinds of influence which Germany, after the literary decay of Protestantism, exercised over England. The literature of marvels was almost the only direction in which the literary communication between the two countries remained relatively flowing and vigorous; one of the two or three 'lines of cleavage,' as it were, along which the international barrier of unlike language and custom yielded an easy passage. The great mass of the German stories traceable in England at all had this character; and scarcely any, without it, seriously impressed the English imagination, or in any way modified the course of English letters. The Portent and the Wonderful Strange News are the plebeian elements in this literature of marvels; humble kin, but still kin, of 'Famous Histories' which all the world knows by name. Few of them contain the stuff of a *Faustus*, but they flattered the same taste, they contributed to create and sustain the intellectual atmosphere in which stories like *Faustus* thrived and bore fruit; the fictitious and mythic elements in them bore the stamp of the same imaginative mint.

The present chapter is an attempt to give a connected view of the whole of this literary cycle, so far as it has left extant remains in England. I shall deal first with the few slighter legends which found their way into ballad or play; sombre tragedies, all of them, of the 'damnable life and deserved death' type, recording with grim unction the 'doom' which overtook Hatto, or the Wandering Jew, or the burghers of Hamelin. From these it is an easy step to *Faustus*, by far the most important of all the German acquisitions of the century,—and to the series of reflex-Faustuses which in my view it is not

difficult to discern in the drama for half a generation afterwards. In *Fortunatus* the analogy to *Faustus* is of a different kind; the original legend has hardly a trace of the sombre colouring of *Faustus*; but both turn upon a command of supernatural powers, and we shall presently see the naive romanticism of the *Volksbuch* assuming, no doubt under the influence of *Faustus*, an incongruous air of tragedy in the well known play of Decker. Finally, the scanty traces of German witch-stories present a sort of hideous travesty of the *Faust* motive;—the diabolic intercourse in a more repulsive form, the supernatural powers put to a baser use. All these in different ways reflect the two antagonistic standpoints between which the German imagination in the sixteenth century incessantly oscillated. The exultant Titanism of the Renaissance, the delight in every vehement and defiant putting-forth of power; and, on the other hand, the horror of presumption, the disposition to see diabolic inspiration in every extraordinary achievement, and divine judgment in every sudden humiliation, which like some other articles of mediæval faith was reasserted with still more urgent and impassioned emphasis by Protestantism<sup>1</sup>.

## I.

Nowhere are the limitations which controlled the LEGENDS. literary intercourse of England with Germany more palpable than in the case of the Legends. Of the vast body of traditional lore which was still current, not merely

<sup>1</sup> On the whole subject dealt with in the foregoing pages, I am much indebted to Prof. Ward's very full and stimulating introduction to his edition of *Faustus* and *Friar Bacon*;—at present, unfortunately for many students of Elizabethan drama, out of print.

in the mouths of the country people, but in literature, an infinitesimal proportion reached this country; and these, with hardly an exception, bore the drastic stamp of Faustus. Along the great river which every travelled Englishman knew, the story of Siegfried, in whatever homely form, must still have been alive. But neither he nor any of his brother heroes of the *Heldensage* is ever heard of in England<sup>1</sup>, and indeed, if it were not that the ballad of 'God's terrible judgment upon Bishop Hatto' early found eager readers, we might reasonably suspect that the cultivated Englishman conceived the legendary river almost exclusively as the source of the excellent 'Back-rach' and 'Rhinecow' which he drank at his ordinary. Even the two poets who first gave German legend a definite place in the English drama, Marlowe and Decker, know of the legend-haunted river nothing but its vine-clad banks, and the wild-boars whose tusks spoil the vintage<sup>2</sup>; and the *Masque* with which Beaumont celebrated the nuptials of the Princess Elizabeth at Gray's Inn is even more bare of local sentiment than the rococo Epistle of Boileau. A mere trace of the famous Drachenfels legends occurs, noticed as if quite unknown, in the narrative of the journey of the Princess Elizabeth up the Rhine to Heidelberg after her marriage<sup>3</sup>. A

<sup>1</sup> At several points these legends were brought into curious approximation to English literature, as e.g. in Brandt's allusion to 'Frau Kriemhild' (*NSch.* chap. 42), omitted however by Locher, and naturally by Barclay also. So the Eilsam of the Rosengarten (*ib.* chap. 72).

<sup>2</sup> Marlowe, *Doctor Faustus*; Decker, *London's Tempe*, 1629, (Works, IV. 120).

<sup>3</sup> After mentioning that the Princess lodged for the night at 'Overwinter,' the narrative proceeds: 'Not farre from this towne, are seven great mountains standing close together with the fair castles. In one of which the people of the country report, that the

few ecclesiastical legends too, of European renown, attached a certain mystic sanctity to the great city of the Lower Rhine where the Three Kings and the Eleven Thousand Virgins had found their final resting-place<sup>1</sup>. But, as has been implied, the single genuine Rhine legend which won a firm footing in England was that which had long before turned the old *Miethethurm* of the bishops of Mainz by Oberwesel into the terrible *Mäuseturm* where the arch-criminal among them, Hatto, met his deserved death.

Both Trittenheim<sup>2</sup> and Münster had told Hatto's story *Bishop Hatto*. in the traditional form; and it was certainly known in England before the end of the third quarter of the century. In 1572 the author of *A briefe collection of strange and memorable thinges gathered out of the Cosmographie of S. Munster* included this among them<sup>3</sup>.

Divell walkes and holds his infernall Revels.' Continuation of Stowe's *Annals*, 1613, p. 921.

<sup>1</sup> An English version of the *Three Kings of Colleen* was printed by Wynkyn de Worde, without date. The title runs: 'Prologus. Here begynneth the lyfe of the three Kynges of Coleyn. . . as it is drawn out of dyvers boke and put in one. And how they were translate fro place to place.' It was a translation of the Latin narrative printed in 1481 by 'Bartholomaeus de Unckel' (date and name given at the beginning of the index), and dedicated to Florencius de Werelkoven. The legend of S. Ursula and the 11,000 was scarcely less English than German. After Lydgate's hymn on the subject, however (reprinted by Halliwell, *L.'s Minor poems*), it seems to have been wholly neglected in English. In Germany this was by no means the case. About the middle of the century a certain order called 'S. Ursula's Schifflein' was founded at Strassburg. It was a century of *Naves* and *Naviculae*.

<sup>2</sup> *Mon. Hirsaug. Chronica*, sub anno 967. He professes to withhold judgment upon the *fabula*, but points to the still existing *Murium turris* and to the local tradition as arguments in its favour.

<sup>3</sup> 'A thinge done at a towne in Germany called Bingium,' fol. 16.

On Aug. 15, 1586, a ballad called 'The wrathful judgment of God upon bishop Hatto' was entered, among others, in the Stationers' Register. The form of the title suggests that the story was already generally familiar; plain 'bishop Hatto' was not the style in which a rhetorical ballad-monger commended an unknown hero to his readers. In any case it was familiar some thirty years later. In 1613 the narrative of the princess Elizabeth's Rhine journey speaks of it in a manner which implies this. 'After leaving Coblentz,' he records, 'we came to Brobgech, being there received by the bishop of Trier, and stayed in that place that night. Here standeth that castle in which by report a Germaine Bishop was eaten up by Rats<sup>1</sup>.' Somewhat later, at a time of famine, the moral significance of Hatto's end presented itself forcibly. A very humble poet, and one of the flattest set of verses in the Roxburgh Ballads, was the result. It is headed: 'Bloudy newes out of Germanie, or the people's miserie from famine. Being an example of God's just judgment on one *Harto*, a Nobleman, in Germanie, of the town of Mentz, who, when the people were decayed' &c. This is followed by a rude woodcut representing three figures praying, presumably for the cessation of the famine. The opening verse gives a clue to the writer's motive, which was evidently not purely literary:

When as my mind was fully bent  
Some story for to rhyme,  
Amongst all others none I found  
So fitting for the time.  
...it may well compared be  
Unto a song of joyful news  
In pain and misery.

evidently a reflexion on some grain-hoarding Hattos of his own time.

<sup>1</sup> Continuation of Stowe, 1613.

A somewhat more interesting use of the story occurs in drama. The 'Comical History' of the 'Costlie Whore,' acted by the company of the Revels, was printed in 1633. The principal subject is the infatuation of the Duke of Saxony for a Venetian courtesan. He proposes to marry her, whereupon his son Frederick, indignant at the unworthy alliance, quarrels with him. This does not however prevent Frederick himself from entering on a scarcely less palpable *mésalliance*, nor his father from punishing the too sincere flattery. A certain contrast and conflict of classes was thus part of the motive of the play, and it may be that this accounts for the introduction in it of the Hatto-story. The rich bishop has burnt among the rest the starving peasants, and afterwards suffered the vengeance of a God, who, in popular legend, is usually on the side of the poor. When the play opens, Hatto's funeral has just taken place. His brother, who oddly bears the same name, is finally appointed bishop of Mentz<sup>1</sup> in his stead; there is a third brother Alfrid, who narrates the terrible death of Hatto to a fourth, the duke of Saxony. The first act contains the most remarkable use of the story. Hatto the second has just turned away some unfortunate beggars with severity. But the beggars are 'sturdy and valiant,' and, encouraged by the late notable 'example,' they plainly suggest that he will probably share his brother's fate if he does not listen to them: 'he will be eaten by rats too!' Hearing the threat, his brother Alfrid intervenes with prudent counsels:

<sup>1</sup> In the play this is throughout written *Meath*. The *h* of 17th century handwriting was little distinguished from *z*. *Th* was therefore in an English book an easy misprint for the unfamiliar combination *tz*. The familiar name *Meath* would then easily effect the further change of *n* to *a*. Dr Elze in his otherwise valuable introduction to Chapman's *Alphonsus*, perversely suggests *Metz*.

Good brother, stay yourselfe from wrathe,  
Thinke on the bishop and his odious death.

*Hatto.* What odious death, I pray?

*Alfrid.* Eaten with Rats,

Whilst he was living for the wrong he did  
Unto the poore, the branches of our God.

*Hatto.* Tis true, and therefore call the poore againe.

Come hither friend, I did forget myselfe.

Pray for me, ther's some silver for thy wants.

*Beggars.* Now the Lord blesse you, and keepe your goode face<sup>1</sup>

From being Mouse-eaten: wee came thinking

We should have some dole at the Bishop's funerall,

But now this shall serve our turne, wee will

Pray for you night and day.

*Hatto.* Goe to the backegate, and you shall have dole.

*Omnes.* O the Lord save thee.

(*Exeunt B.*)

Feeble as this passage is, it is the most notable that the English drama has devoted to the legend of Hatto.

*The Piper  
of Hameln.*

It was reserved for the Mérimées and Brownings of a later age<sup>2</sup> to put to literary use another story in which the moral accent, though less theological, is equally pronounced,—the famous legend of Hameln. It had indeed already found a corner in the great compendium of Verstegan<sup>3</sup>, and was repeated thence later by Heylin in his *Microcosmus*; but its literary fortune for the present went, and perhaps could go, no further. Its delicate air of the marvellous was sufficient, on the one hand, to repel a good deal of seventeenth-century enthusiasm; while, on the other, it altogether fell short of the lurid supernatural horror which had made the fortune of *Faustus*.

<sup>1</sup> Mr Bullen's correction (*Old Plays*, iv. 238) for the corrupt 'fate'. The whole passage is, as Mr Bullen says, undoubtedly prose.

<sup>2</sup> I refer to the charmingly told version in the *Chronique du règne de Charles IX.* Simrock has modernised it in German.

<sup>3</sup> *Restitution of Decayed Intelligence*, 1605.

This supernatural horror is easily recognised, however, in another story, of which there are earlier traces, but which only in the early years of the seventeenth century obtained decided currency,—that of the Wandering Jew. Though not peculiar to Germany, it was known in England at this time mainly from a German source,—the *Wunderbarlicher Bericht* of Chrisostom Dudulaeus<sup>1</sup>, the origin of a ballad entered in the Stationers' Register of 1612, under the title: 'Wonderful strange newes out of Germanie of a Jewe that hath lived wandringe ever since the passion of our Saviour Christ.' Of this ballad nothing more can be said unless we may assume it to be identical with that published by Percy on the subject. In any case it is clear that even then a vivid interest was excited by the strange figure who, like Faustus, is so profoundly isolated from the world he moves in, and, like him, suffers under the weight of a *privilegium* which, apparently exempting him from human limitations, in reality involves him in a unique curse<sup>2</sup>.

*The  
Wandering  
Jew.*

## II.

It is hardly an accident that, in turning over these DOCTOR FAUSTUS<sup>3</sup>.

<sup>1</sup> *Wunderbarlicher Bericht, von einem Juden, aus Jerusalem Bürtig, Ahasuerus genandt, welcher fürgibt als sey er bey der creutzigung unseres Herren...persönlich gewesen, &c.* This account refers to the most famous 'appearance' of the sixteenth century, that at Hamburg, 1547, attested by Paul Eitner, and afterwards recorded by Dudulaeus.

<sup>2</sup> Long afterwards the idea of the Wandering Jew supplied the framework of some vigorous sketches of London character: '*The Wandering Jew telling fortunes to Englishmen*, 1649;' reprinted in Halliwell, *Books of Characters*, 1857.

<sup>3</sup> The details of Marlowe's play and its relation to its German source have been amply discussed in recent years; and the present section makes no attempt to restate these familiar facts.

waifs of German story, stranded by chance upon the domain of English letters, and, as we have seen, receiving there at the best a somewhat lenten entertainment, we should have been continually reminded of one which had altogether better fortune, and not merely received a royal welcome from the first, but gathered in its train a crowd of followers, and left a memory which after the changing fashions of more than a century still remained fresh and green<sup>1</sup>. Almost all the elements of attraction which belonged to the rest are resumed and concentrated in *Faustus*; which is accordingly not merely by far the most remarkable of the German contributions to English literature, but the most vivid embodiment of their generic qualities, the central type about which they all converge. The wild pranks of Ulenspiegel, the diabolic feats of Friar Rush and the Kalenberger, of witch and wizard, the appalling shadow of an irrevocable doom which encompasses Hatto and the Jew, nay even the mere monstrosities of the flying news-sheet, the marvellous transformations, the unheard-of cures, the phenomenal crimes and adventures which tempted the penny out of the pocket of the town apprentice and the rustic Mopsa,—were all represented in the story of the infamous, yet irresistible doctor of Wittenberg.

All this, however, did not prevent Marlowe's choice of the subject for a drama from being extremely original. He was indeed habitually original in this matter. Where Shakspere loved to glorify a twice-told tale at the risk of

<sup>1</sup> The popular play of *Dr Faustus* had almost as remarkable a history in England as in Germany. The furore created by it in 1726 (cf. *Dunciad*, III. 308 and Pope's note on this 'miserable Farce'), and Mountford's *Faust Harlequinade* of 1698 show its singular power of interesting a generation less in sympathy than any other in English history with the class of subject to which it belongs.

provoking the charge of plagiarism, Marlowe chose to be the daring singer of 'unattempted things.' Neither waiting timidly on the popular taste, nor cautiously educating it, he flung himself with characteristic audacity into new and untrodden regions, and created a *furor* for an unknown name. No English dramatist had yet searched the annals of Turkey, when Marlowe drew the story of Tamburlaine from the pages of Mexia and Perondinus. No one had yet sought dramatic effect in the anti-Jewish fanaticism of the time, when he took from some unknown source the story of Barrabas of Malta. No one had put the ferocities of contemporary history on the stage when he drew with somewhat too tolerant a pen the closing years of the house of Valois. In 1587, a German *Volksbuch* was at least as unfamiliar ground to the playwright as a Turkish chronicle; and the name of Faustus, if not wholly unknown, was far more obscure than that of the Scythian shepherd<sup>1</sup>.

Once launched, however, *Faustus* had like *Tamburlaine* an enormous success. The name itself became a byword in the popular mouth, a stock term for the typical German; and Shakspeare could allude, more than a dozen years afterwards, to an incident in it, with the certainty that the point would be appreciated<sup>2</sup>. And we know that younger writers at least once, in 1602, attempted to make capital out of its popularity by extensive 'ad-dycions,' to its slender bulk<sup>3</sup>. The many-sided fascina-

<sup>1</sup> Curious writers, like Reginald Scot, were probably familiar with the story, which occurs substantially in Weier's section on *Zauberey* in the *De præstigiis dæmonum*.

<sup>2</sup> The Host's reference to the horse-stealing 'Dr Faustuses' in the *Merry Wives*.

<sup>3</sup> Those formerly supposed to have been made by 'Thomas Dickens' in 1597 rest on the authority of one of Collier's forged

tion of the story, apparently so simple in its elements, brought it, in fact, instantly home to the imagination of all classes. For one he was the incomparable trickster, the more potent and intellectual Owlglass, who could jest with the emperor and pass practical jokes with impunity upon the accursed Antichrist of Rome. For another he was the magician whose extraordinary art had procured him the potent service of the devil; for a third the unhappy scholar whose tampering with forbidden knowledge had involved him in a horribly tragic fate. The supreme attraction, however, and also the supreme significance of the subject in the English drama, certainly lay in his peculiar relation with the devil. The absolute authority which he exercises over Mephistophilis, and which nevertheless, like the Saturnalian authority of the Roman slave, only marks his complete subjection, has fascinated generations to which the relation was intrinsically much less credible than it was to that of Elizabeth. The bond was in itself a piece of tragic material of the first rank; capable, even without any supernatural colouring, of producing situations of unsurpassed pity and terror. Jephthah's sacrifice, Macbeth's fall, Lear's ruin, not to speak of the milder fate of the Merchant of Venice, are the result of compacts of which the conditions were imperfectly understood,—of 'one-sided contracts'; and where this pathetic half-ignorance is absent, as in the deliberately chosen fate of Antigone or Alcestis, we have the not less tragic compact of heroism, the wilful barter of life for the privilege of duty. In Faust's case, the choice, though voluntary, is not altogether heroic; but the effect lost here is partly compensated by the appalling penalty; and his shrinking horror in the moment when it is about

entries. Cf. Warner, *Dulwich MSS.* My attention was called to this by Mr A. H. Bullen.

to overwhelm him, serves, like the last speech of Antigone, to make more pathetic a doom the bitterness of which was less keenly realised when it was chosen.

Now the vital quality of the Faustus story lay in connecting this admirable tragic subject of the bond with a figure whom the nativity of the English drama was fast depriving of his old vested rights in the English stage. For serious drama, the devil of the Mysteries, whose sole capacity lay in miscellaneous mischief making, was played out; his occupation was gone. But the fascinating invention of Mephistophilis and his bond made the devil again dramatically possible, and gave him a new lease of existence on a more developed stage than he had ever known.

The process of imitation which began when *Faustus* *Imitations of Faustus.* was still in the heyday of its first success, was not entirely due however to the wish to borrow its piquant motive. Dramatic zeal was supplemented by a very palpable vein of English patriotism. Just as the Borde collections of Scogan's and Skelton's jests were probably due to patriotic rivalry with the newly translated 'Owlglasse,' so the success of the German Faustus produced a keen inquiry for English Faustuses. They were not far to seek. Wittenberg, the chief of German universities in English eyes had produced the chief of German magicians; and both Oxford and Cambridge could produce a tolerable counterpart of their own.

The story of one of these had already been told in *Friar Bacon.* the spirit of the most jubilant English patriotism. The chief figure of the *Famous Historie of Friar Bacon and Bungay* was not merely a great conjurer but a national hero, a champion of England on the field and, if one may so say, in the laboratory. His arts reduce a refractory French town to the will of the English king; an

old tradition attributed to him the design, only accidentally frustrated, of protecting England from invasion by surrounding it with a brazen wall; another, doubtless much later, described as his crowning achievement the triumphant defeat of the foreign magician Vandermast.

The resemblance of Bacon to Faustus had evidently struck Marlowe himself. More than one touch shows him to have drawn his picture of the German magician with the fame of the English Roger Bacon in his mind; 'wise Bacon's works' are among those which serve for Faustus' instruction (Sc. 1), and one of Bacon's most famous mythical designs,—the casting of brazen walls about the coasts of England,—is boldly transferred to his German disciple.<sup>1</sup> At the same time the analogy was evidently far from complete. The tragic horror which hung over the name of Faustus was totally wanting in the national legend of Bacon. Both had lived on familiar terms with the powers of hell, both had reduced the fiends to their service; but Bacon's authority over them is not only not the fruit of any guilty bargain, but is evidently regarded as an illustrious distinction, involving in the worst case merely a loss of time that might be better spent; and as if still further to destroy the analogy, he is made to regret even this misspent time, and to lay aside in a mood of timely and reasonable repentance the powers which a tragic Nemesis violently wrenches from the dying Faust. The popular story of Friar Bacon is that of Faustus denuded of its gloomy intensity, rewritten throughout in a major key, and culminating, not in fierce theological anathemas against intercourse with hell, but in the philosophic reflections

<sup>1</sup> Sc. 1. 86, 'I'll have them wall all Germany with brass.' Ward, *Faustus*, &c. p. vi.

of a Cornelius Agrippa upon the vanity of human knowledge.<sup>1</sup>

Such a story necessarily lacked much of the peculiar power of the Faustus legend, which, as we have seen, lay precisely in the tragic use which is made of the bond. It happened, however, that the dramatist who took it up, and who handled it with obvious reference to Faustus, was perhaps of all his contemporaries the least sensitive to the seductions of purely tragic effect. Imitator of Marlowe as Greene at times appeared to be, he consistently forbore to follow him in the gloomier workings of his genius. The triumphs of Barrabas, of Tamburlaine, of Faustus, of Edward, of Dido, of Chatillon, end uniformly in ruin or death; Greene, whose own end was to be so unhappy, refused to lead his heroes to a tragic catastrophe; his Alphonsus remains powerful to the last; his history of James considerably stops short of Flodden; and his friar Bacon turns in time from his evil ways. The joyous and light-hearted spirit of the Bacon legend was on the whole quite safe in his hands. Bacon is still the 'frolic Friar'; his feats, however adventurous, are still inspired by good-natured patriotism and disinterested humanity, as those of Faustus are by egoism, buffoonery, or at best by a *Wissensdrang* which it is difficult to take quite seriously.

Nevertheless, by one of those artistic inconsistencies to which his discordant and unbalanced character made him peculiarly liable, Greene at a certain point abruptly abandons the light tones of his model. The repentance-scene in the play is of altogether a more solemn cast than that of the story-book. There, as we have seen, Bacon has nothing worse to reproach himself with than

<sup>1</sup> Cf. the farewell speech of Bacon to his students in the *Famous Historie*, quoted in part below. Ward, *ib.* p. xlvi.

the expenditure of time in pursuit of knowledge that 'serveth not to better a man in goodness, but only to make him proud and think too well of himself. What hath all my knowledge of nature's secrets gained me? Onely this, the loss of better knowledge, the loss of divine studies, which make the immortal part of man, his Soule, blessed.' Far more poignant are the regrets of Greene's Bacon:

The hours I have spent in pyromantic spells,  
The fearful tossing in the latest night  
Of papers full of necromantic charms,  
Conjuring and adjuring devils and friends,...  
The wresting of the holy name of God...  
Are instances that Bacon must be damned  
For using devils to countervail his God.

There is however a remedy for his deadly sin,—one superfluous in the case of the prose Bacon's venial error:

Yet Bacon cheer thee, drown not in despair:  
Sins have their salves, repentance can do much:  
Think Mercy sits where Justice holds her seat,  
And for those wounds those bloody Jews did pierce,...  
From thence for thee the dew of many drops  
To wash the wrath of high Jehovah's ire  
And make thee as a new-born babe from sin.

In other words, the Agrippa who has merely wasted his life in vain speculation, passes for a moment into the Faustus who has lost his soul by holding intercourse with hell, and who can only be saved by the mercy of Christ. The philosophic Bacon is suddenly immersed in the *criard* lights and shadows of Lutheran theology which gave so definite a character to the figure of the German magician. And if he ends, like the prose Bacon, and unlike Faustus, in calm seclusion, it is by virtue of a theological remedy—the appeal to Christ—which

Faustus would have used if he had dared, but of which the prose Bacon stood in no need. Greene saves his hero from Faustus' penalty, but involves him in his guilt; and the Englishman escapes the 'deserved death' of the German only to be associated, at the eleventh hour, in his 'damnable life.'

This was not, however, the only point in which Greene was influenced by *Faustus*. In spite of the extraneous accretions which had gathered about it, the latter still retained the unmistakable flavour of university society. Its hero was a Wittenberg professor; his disciples, his servant, Wittenberg scholars; his pursuit of magic is undertaken after an experience of the vanity of all other studies for which only a university could afford scope. All the critical scenes of the story take place at Wittenberg<sup>1</sup>. A somewhat similar relation connected Bacon with the university of Oxford. But in the *Famous History* this connexion is almost entirely obliterated. The first chapter indeed describes his early successes there, but throughout the sequel, so far as appears, Oxford is nothing to him, or he to Oxford. He is an eminent conjuror patronised by the court, and if we can infer that he lived and worked at Oxford, it is at most from the implication of one of his adventures, that 'Oxfordshire' is not far off. But Greene, the 'Master of Arts of both Universities,' was more sensitive on this point; and in his drama Oxford becomes very palpably the Wittenberg of Bacon. The awestruck Wittenberg scholars who are grouped about Faustus, are replaced by a little knot of Oxford doctors whose awe is scarcely less, though, in harmony with the characteristic tone of the story, it is much

<sup>1</sup> As Prof. Ward observes to me, the latest adapter of the Faust-story for the stage has shown his insight by laying its scene at—Nürnberg!

less mingled with theological horror<sup>1</sup>. And the rough serving-man of the *Famous Historie*, Miles, is handled with an evident eye to the poor scholar who serves Faustus, the third figure in importance after Faustus and Mephistophilis, and so little less popular than his master that he presently became the hero of an independent *Volksbuch* of his own. Like Wagner, the Miles of the drama is a scholar in his way,—Bacon's 'subsizar,' 'Doctor Bacon's poor scholar,' he is called,—and addicted beyond all the other characters, though few are quite free from it, to the foible of Latin scraps. Bacon's cutting raillery of him as 'the greatest block-head' in the university, who cannot speak one word of true Latin,' would have been a compliment quite out of the question to pay to the rustic Miles of the *Historie*.

And, finally, Greene has not only treated the Oxford of Bacon as a sort of English Wittenberg, but he has given his championship of English magic a direct point against the rival magic of Germany. The Vandermast of the *Historie* belongs to the French ambassador, and his defeat is only a new disgrace inflicted on the national enemy; but in the drama he is the champion of the German emperor,—one of the same race, Greene evidently thought (for he calls him a Habsburg) as the Charles who had witnessed the greatest exploits of Faustus. Vandermast,—'the German' as he is repeatedly called,—thus becomes the representative of the country of Agrippa, Tritheim, and Paracelsus,—names with which that of Roger Bacon could alone compete;

<sup>1</sup> We come, they say to Bacon,  
not grieving at thy skill,  
But joying that our academy yields  
A man suppos'd the wonder of the world.

and now Faustus was added, the pupil of Agrippa<sup>1</sup>, and yet more mighty than his master. The episode with Vandermast thus became a sort of mock trial of strength between the two countries. The unskilful Friar Bungay succumbs to the superior art of Vandermast, but his defeat only relieves the subsequent triumph of Bacon. Faustus on the demand of the Emperor Charles, had brought up Alexander the Great: Vandermast as the champion of Frederick, produces Hercules: Bacon who sends 'the German' with Hercules back to Habsburg whence he came, triumphs implicitly over Faustus too; and King Henry's complacent remark, 'Now, monarchs, hath the German found his match'<sup>2</sup> (II. 126), is a formal record, as it were, that judgment has gone in favour of the countryman of the poet and of the audience.

A different distinction belongs to the hero of a second English Faust drama, which followed *Faustus* at an indeterminable, but probably not very long interval. Peter Fabell, of Peterhouse, stood even nearer than the Oxford friar, to the doctor of Wittenberg<sup>3</sup>. All three are scholars, and university men, who have won command of supernatural powers by hard study. But while Bacon, even in the vulgarest conception of him, retains something of the scholar to the end, in Fabell, as in Faustus, the scholar is rapidly obscured by the boisterous practical joker. Moreover, the pact, with which Bacon contrives to dis-

<sup>1</sup> *Faustus*, Sc. I.

<sup>2</sup> Cf. the lines VII. 23—25,

Bacon, if he will hold the German play,  
Will teach him what an English friar can do.

W. Wagner (*Faustus*, Introd. p. xxxvii.) has briefly touched this point.

<sup>3</sup> The legend was probably as old as the century. Fabell is said to have lived under Henry VII., and to be buried at Edmonton.

pense, is the foundation of Fabell's power, as it is of Faustus'. Bacon secures the obedience of his spirit, like Prospero, by sheer knowledge and art; Faustus and Fabell only by pledging themselves body and soul. While Faustus however loses his pledge and is carried off in a tragic catastrophe of extraordinary impressiveness, Fabell ingeniously eludes the fiend and secures a new lease of authority and life<sup>1</sup>. Both Englishmen thus in different ways have the advantage over the German: Faust buys his power, and has to pay for it; Bacon extorts it without pretence of buying: Fabell gets it on credit and tears up the bill. The English Faustuses might be less famous than the German, but they had the prestige of success, and one imagines the complacency with which an Elizabethan audience would regard the national champions who had enjoyed all the privileges of Faustus without paying for them. But apart from such extraneous aid, the situation had dramatic piquancy of its own; it shared the endless popularity of the whole group of tales in which a natural superior is adroitly overcome by one entirely in his power,—where for instance a Tanner of Tamworth or a Miller of Mansfield resists the king, or where, as in Jonson's play, 'the Devil' is, with very little difficulty, proved 'an Ass.' If the English Faustus did not thrill the audience by a tragic end, he at least amused them by his clever evasion of it. For the rest,

<sup>1</sup> The *Smith of Apolda*, whose legend springs doubtless from the same source as that of Fabell, does this three times successively by the aid of three magical gifts bestowed on him by St Peter,—a chair, an apple tree and a wallet, each with the property of holding fast whoever touches them, which the fiend is simply enough induced to do. In the Fabell drama only the first, the chair, is used. Cf. Thoms, *Lays and Legends of Germany*, p. 160. He refers to one told by Grimm in the note to 'die Spielhansel' in the *Kinder u. Hausmärchen*.

the feats of Fabell are as trivial as those of Faust himself, though not quite similar. It is needless to dwell upon the repulsive story, how Fabell, by the aid of his spirit, personates a friar, and releases his friend's mistress from the convent where she was confined.

In spite of the analogy of its story, however, the *Merry Devil* is obviously hardly more than a boyish travesty of *Faustus*. The tragic terror has altogether melted away, and left a mere skeleton of grotesque and trivial adventure. Fabell is purely and simply the Owlglass-Faustus, a boisterous and successful jester, whose dealings with the devil, far from any suggestion of tragedy, turn out to be the best jest of all. Completely different was the treatment of a Faust-subject in a drama played at Court some twenty years after the first performance of Marlowe's play. The author of *The Devil's Charter*<sup>1</sup> was probably not unconscious that the royal exponent of orthodox demonology was to be among the spectators; and though without a spark of Marlowe's tragic power, he has borrowed his most lurid colouring. The story of Alexander VI. offered a unique opportunity. On the very morrow of his death popular rumour began to whisper that the pope had been carried off, like Faustus, by fiends; and the powerful imagination of German Protestantism produced a finished legend which represented all his successes, including his election to the papacy, as the fruit of a formal contract with the devil<sup>2</sup>.

B. Barnes:  
*The Devil's  
Charter*,  
1607.

<sup>1</sup> *The Devil's Charter*, by Barnabe Barnes, London, 1607.

<sup>2</sup> The story appears, substantially as in Barnes, in Hondorff's *Promptuarium Exemplorum*, Frankfurt 1572, and again in Widman's colossal commentary to the Faust-book. I have not met with the trait of a *contract* in any of the Italians, the Italian conception of the pope's history, where it assumes devilry at all, rather approaching the *Don Juan* than the *Faustus* type. I am indebted for the

The latter appeared as a protonotary<sup>1</sup>, the contract was signed and sealed, and Borgia then received the pecuniary means of securing his election<sup>2</sup>. At the same time he was told the period of his authority, which, by a verbal equivoque like those associated with the fortunes of Pyrrhus and Edward II., was made to appear longer by seven years than it was destined to prove: *Sedebis Romae Papa, summa felicitate tui* [sic] *et filiorum annos XI et VII dies VIII post moriere*. Not eighteen, but eleven years afterwards<sup>3</sup>, the fiend arrives to claim his victim, who, after a lengthy explanation, is carried off to his doom.

This legend was certainly poorer in genuine tragic motive than the analogous story of Faustus; and it was not for Barnabe Barnes to become its glorifying Marlowe. This did not prevent him however from writing under the obvious inspiration of the dead poet. The sensational details of the bond-scene were, to begin with, a precious contribution to demonological aesthetics, and the spectators are accordingly shown how "the devil... strippeth up Alexander's sleeve and letteth his arme bloude in a saucer," upon which the pope subscribes and delivers. "The remainder of the bloud," it is

reference to Hondorff and Widman, and for the Don Juan parallel, to Prof. Ward.

<sup>1</sup> In Widman, the appearance as protonotary is preceded by two others in much more eccentric forms.

<sup>2</sup> This trait must have been a relatively late addition, his enormous wealth as cardinal being well known to his contemporaries.

<sup>3</sup> The pope construes: 'annos xi. et vii., et dies viii.; post moriere'; the devil audaciously explains: 'annos xi., et dies vii.; octavo (die) post moriere.' Neither Hondorff nor Widman gives these lines, which I suspect that Barnes composed. Widman makes the term 19 years, made up of 11 and 8.

added (with a housewifely eye for cleanliness uncommon in tragic poets), "the other divill seemeth to suppe up<sup>1</sup>."

But Barnabe's appreciation of *Faust* comprised more than a keen relish for its thrilling crudities. He was not insensible to the tragic power of Marlowe's work, and in at least one or two points, seems to have borrowed from his wealth of resource. The fine trait of Faustus' wavering after the signing of the pact, partly symbolised in the conflict of the Good and Evil Angels, partly made explicit in his own words:—

When I behold the heavens, then I repent  
And curse thee, wicked Mephistophilis,  
Because thou hast depriv'd me of those joys.

.....  
My heart's so harden'd I cannot repent:

.....  
Why should I die then, or basely despair? .  
I am resolv'd: Faustus shall ne'er repent.

reappears in the more matter-of-fact reflexions of Alexander:—

But Astaroth, this covenant with thee  
Made for the soule more pretious than all treasure  
Afflicts my conscience.—O but Alexander  
Thy conscience is no conscience; if a conscience,  
It is a leprouse and polluted conscience.

.....  
I...cauteriz'd this conscience now sear'd up...

.....  
In spight of grace, conscience, and Acharon  
I will rejoyce, and triumph in my Charter. (I. 4.)

The last scenes, which somewhat diverge from the original, are remodelled with some help from *Faustus*.

<sup>1</sup> The resemblance of this scene has already been pointed out by W. Wagner, *Faustus*, p. xxxviii. There is no suggestion of the signature in blood in Hondorff or Widman.

The fatal banquet is just over<sup>1</sup>, in which the poison prepared for another has been furtively put into the cups of Alexander and Caesar. The pope retires struck with sudden disease. The fiends, the real authors of the mischief<sup>2</sup>, assemble in preparation for the climax:

*Astar.* Let Orcus, Erebus and Acheron,  
And all those Ghosts which haunt the pitchy vaultes  
Of cole black darknesse in Cimerian shades,  
Muster themselves in numbers numberlesse  
To daunce about the Ghost of Alexander....  
The date of his damnation is at hand. (v. 5.)<sup>3</sup>

Then we see the pope sitting, in invalid undress, between two cardinals. Like the Scholars in their last interview with Faustus, and the Old Man, they exhort him to repentance. The analogy is the more striking because, unlike Faustus, he does not anticipate the imminence of his end<sup>4</sup>. Like Faustus he is overcome by a

<sup>1</sup> Barnes, as well as Hondorff and Widman, follow Guicciardini's statement that the illness was a consequence of poison taken by mistake. Some doubt is thrown on this by Gregorovius (vii. 497).

<sup>2</sup> Guicciardini, followed in less detail by Hondorff and Widman attributes the error to an inexperienced servant. Barnes heightens the effect by making it the work of one of the fiends. (v. 5.)

<sup>3</sup> Cf. *Faustus* (ed. 1616,—a version undoubtedly produced before Barnes' play):

*Luc.* Thus from infernal Dis do we ascend  
To view the subjects of our monarchy,...  
Mong which as chief, Faustus, we come to thee  
Bringing with us lasting damnation  
To wait upon thy soul; the time is come  
Which makes it forfeit.

<sup>4</sup> In Widman he is made to suspect his illness to be a premonitory symptom of the devil's coming: *Der Bapst gedacht nun, es wirdt die Zeit seyn, in welcher ich dem Teuffel mus meine rechenschaft geben, dann ohne zweiffel ist dieses . . ein angriff des Teuffels, der abfordert mein zeit und ziel.* In Barnes there is no hint of this, nor in Hondorff.

pang of remorse,—not, it is true, in the presence of the Cardinals, whom he dismisses with an ironical request that they should ‘pray for themselves,’ but in the solitude which immediately follows:

O wretched Alexander, slave of sinne  
And of damnation; what is he that can  
Deliver thy poore soule? Oh none but he  
That when thou didst renounce him cast off thee;  
Repentance is in vaine, mercy too late<sup>1</sup>.

But the fit soon passes, and with fresh curiosity he prepares to use his exorcism once more, and invoke the fiends to show him knowledge of ‘the manner of death<sup>2</sup>.’ He draws a curtain and discovers ‘the divill sitting in his pontificals<sup>3</sup>,’ who promptly cuts short his desire. The

<sup>1</sup> Cf. Faustus’ cry on the exit of the Old Man:

Accursed Faustus, wretch what hast thou done?  
I do repent, and yet I do despair:  
Hell strives with grace for conquest in my breast;  
What shall I do to shun the snares of death?

<sup>2</sup> So Faustus’ remorse is cut short by the second sealing of the bond with Mephistophiles which procures him the sight of Helen. The trait of sending for his conjuring book is represented however both in Hondorff and Widman, who make it the immediate consequence of his illness. In both he desires to discover ‘whether his illness will be fatal.’ It is possible that Barnes wrote ‘the manner of my death.’ As printed the line is defective: ‘To shew me now the manner of death.’

<sup>3</sup> In its original form this trait is very old. Sanuto’s diary (quoted by Gregorovius, VII. 496) describes how the devil appeared in the pope’s dying chamber as an *ape*. *Et uno cardinale corse per piarlo e preso volendolo presentar al papa, il papa disse lasolo, lasolo, chè il diavolo. Et poi la notte si amald e morite.* The notion of the ape seems at the root not merely of the trait of putting on the pope’s robes, but in that, dwelt on by both Hondorff and Widman, which makes the devil declare to the Pope’s affrighted servant, *Ego Papa sum, Ich bin Bapst*. Prof. Ward points out the similar trait in the *Wagnerbuch*, cap. 2, where Wagner asks that the spirit should appear to him ‘in eines Affen gestalt.’

rest of the scene, with the squabble over the terms of the pact, and the logical argument, necessarily bears little relation to the great finale of *Faustus*. With reasoning which sounds very chill beside Faustus' outburst, and which is also far less characteristically Christian, Alexander urges that the soul is divine and necessarily imperishable. But these things, as his opponent reminds him, 'should have been thought upon before.' Then, driven from all other resource, he calls upon the divine mercy: and the agonised ejaculations of Faustus are replaced by such stuff as this:

Mercy good Lord, oh mercy, mercy, mercy.  
O save my soule out of the Lyons pawes,  
My darling from the denne of blacke damnation  
My soule, my dove, cover with silver wings,  
Her downe and plumage make of fine tryed gould,  
Help, help, help, above, stirre, stirre, stupiditie.

'He charms in David's words with Judas' spirit,' observes the devil with some force.

After a tediously prolonged scene of arguments and protests, strangely in contrast with the speechless swiftness of Faust's end, Alexander is finally 'thrust downe.' Then, as in *Faustus* (ed. 1616), come his former companions, the Cardinalls and Bentivoli:

*Bent.* What is he dead?

*Car.* Dead, and in such a fashion,  
As much affrights my spirits to remember,  
Thunder and fearfull lightning at his death,  
Outcries of horror and extremity<sup>1</sup>.

<sup>1</sup> Cf. the Scholars in *Faustus* (ed. 1616, *ad fin.*):

1 *Scho.* Come, gentlemen, let us go visit Faustus,  
For such a dreadful night was never seen;  
Since first the world's creation did begin,—  
Such fearful shrieks and cries were never heard.

The tragedy of Barnes does not exhaust the list of plays which the strange magnetism of Faustus has palpably affected. On imaginations of the most various cast, that one, profoundly simple, but overpowering situation, left an impression not easily effaced. The genial buoyancy of Greene, in his comedies so rarely broken by his accesses of tragic gloom,—the rollicking fun of the author of the *Merry Devil*, and Barnabe Barnes' vigorous but somewhat phlegmatic appetite for infernal horrors, all received a congenial stimulus from a drama which reflected little of any of these temperaments. In the case of Greene and Barnes it told, though not exclusively, in a tragic pathos more highly strung or more subtly and naturally varied; in a sombre shadow added to the pleasant old English legend, in a few suggestions of terror and pity infused into the gross outlines of a Lutheran *Bapstgeschichte*. In the next section we shall find the same transformation carried out, by hands more skilful than those of either Greene or Barnes, in a German *Märchen*; and one of so much independent interest and importance that it demands a separate treatment.

### III.

The story of Fortunatus, as we know it, is an aggregate of very heterogeneous elements. The principal incident has been enriched with a series of episodes, loosely appended and easily detached. Scarcely any class of mediaeval fiction has failed to contribute to the medley

FORTUN-  
ATUS<sup>1</sup>.

<sup>1</sup> Cf. Valentin Schmidt, *Fortunatus*; J. Zacher, in Ersch u. Grüber; and Tittmann's excellent introduction to the English comedians' version of the play. (Goedeke and Tittmann: *Deutsche Dichter des 16ten Jahrhunderts*, Bd. 13.)

some characteristic incident or colouring. Chivalric romances, religious legends, tales of magic are all represented. There are incidents which belong to the Lear-cycle, and others which belong to that of the Prodigal Son. There are motives from Italian novels and from primitive Teutonic mythology. Almost every country of Europe contributes to its scenery. We hurry to and fro between Cyprus, England, France, Flanders, Venice, Constantinople; we explore the Purgatory of S. Patrick and taste the genial hospitality of Prester John.

All the known editions of the *Volksbuch* contain substantially the same story. From the first German edition, published at Augsburg in 1509, and its numerous German successors, to the Dutch, English and Danish versions of the seventeenth century, the story everywhere unfolds itself in the same elaborate disorder, varying only in quantity of descriptive detail, or at most, in the omission or inclusion of some trifling episode. In outline it falls into four divisions. The first (chapters I.—X.) comprises the early history of Fortunatus preceding the encounter with Fortune which first entitled him to his name. The second (c. XI.—XXIII.) is the history of *Fortunatus and the purse*. After receiving the purse from Fortune, he enters on a career of successful adventure in Venice and elsewhere, and finally marries with great splendour in his native Cyprus. The third (c. XXV.—XXX.) contains the story of *Fortunatus and the hat*. After twelve years of domestic happiness the instinct for enterprise stirs once more in the old adventurer; disguised as a merchant, he visits the Sultan, robs him by a simple stratagem of the wishing hat, returns home and dies, leaving the purse and hat to his two sons Andolosia and Ampedo. The fourth (c. XXXI. to the end) contains the *Adventures of Andolosia*, his intrigue

with the English princess Agrippina, the loss, recovery, and final loss of purse and hat, and lastly, the violent death of both sons.

The German *Volksbuch* of Fortunatus was undoubtedly the source of all the English and Dutch, and probably of the French, versions of it now extant. No Romance version, whether Spanish, Italian or French, so old by many years as the earliest German edition, that of Augsburg 1509, is known to exist. At the same time this edition itself contains evidences of a Romance source, not easy to ignore. Görres, who roundly declared the story to be Spanish, pointed out that the French version of 1670 was described in the title-page as ‘translated from the Spanish original,’ and that Quadrio (perhaps merely on the ground of this dedication) had stated that it was written by a Spaniard ‘non so da chi.’ Of more importance than these vague assertions are the Romance words sprinkled, without apparent reason, pretty freely through the text. These however by no means tend to prove the case for Spanish. The ‘Porta de Vacha, das ist dye Küport’ of the 1530 (Augsburg) version<sup>1</sup>, may point to a Romance original, but *vacha* is nearer to the French *vache* than to Sp. *vaca* or It. *vacca*<sup>2</sup>. In the 1550 version (Frankfurt), ‘pforte de vacca’ is substituted. In the

*History of  
the Volks-  
buch.*

<sup>1</sup> The German versions of the *Volksbuch* fall under two classes, represented by those published at Augsburg in 1509 and 1530, and at Frankfurt in 1550. The Augsburg texts, written in a Bavarian dialect, are in many places ampler in detail and circumstance: they use Romance forms more readily; the woodcuts also are wholly different, and on the whole superior, though less elaborate.

<sup>2</sup> Zacher (Ersch u. Grüber s. v. *Fortunatus*) rightly disputes the Spanish theory but does not explain these names. Why should a South German writer first go out of his way to speak of a *Porta de Vacha*, and then translate it for the benefit of his readers?

English we have simply [the 'cow-gate'<sup>1</sup>. 'Zoyelier' again, as Zacher observes, is nearer to the Italian *giojelliere* (especially pronounced in the Venetian way) than to the Spanish *joyero*. The 1550 edition, which shows a disposition to Germanise these Romance forms, substitutes *Edelstein-krämer*, the clumsiness of which may have hindered its use before. If the mention of 'Alamania,' the home of the maker of the wishing-cap, which does not appear to be the name of a Spanish town, proves the origin of the romance in Spain, the allusion to London may be taken to prove its origin in England. And whatever force may lie in the argument that the name of the sleeping-draught, *Mandolles*, looks, or has been supposed to look, like Spanish, is not only neutralised by the fact that it is not Spanish, but this spurious resemblance is itself the strongest argument for doubting the Spanish origin of the romance in which it occurs.

Whatever part, however, a Romance hand may have played in giving the story its present shape, it was certainly not of Romance invention. Its essential ingredients are in the main Teutonic, and perhaps the most forcible argument for the view that the last *rédacteur* came of a different stock is the indifference to their import which has embedded and overlaid them with a mass of irrelevant additions.

1.  
*Story of*  
*Andolosia.*

One of these ingredients occurs, in an obviously more primitive form, in the tale of the *Gesta Romanorum* (chap. 120 of the Latin, chap. 54 of the English version), first

<sup>1</sup> If this is a bit of genuine local knowledge it stands alone. Louvain is eccentric in its street nomenclature: the modern town contains a *rue des Moutons*, a *rue des Corbeaux*, a *rue des Chats*. But the old maps and views show no gate of this name in either the inner or the outer line of walls. The *Porta lupina* is the nearest approach. I should add that I have seen no map earlier than the beginning of the 17th century.

referred to by Douce and Görres<sup>1</sup>. There the dying Darius bequeaths three gifts to his three sons. To the eldest he leaves what he had himself inherited; to the second what he had conquered; to the third three *iocalia*,—a ring, a necklace, and a rich cloth, of which the first gave him the favour of all, the second fulfilled all his wishes, and the third transported him wherever he wished to go. These three gifts, which obviously did not all belong to the original story, he successively loses through the seductions of a mistress. Her triumph seems complete when after Jonathas has carried her off by the aid of the cloth into a desert place,—‘in tantam distantiam, ubi nullus hominum venit,’—she contrives, like Agrippina, to get the cloth into her own possession, wishes herself at home and leaves him there. The remedy is as in Fortunatus. The frustrated lover discovers as he wanders, water which blisters the flesh, and fruit which produces leprosy. Shortly afterwards he finds other water and other fruit which cure the inflictions of the first. He takes samples of both sorts, and sets out homeward. On the way he finds occasion to heal a leprous king with his second sample, and the renown thus acquired gives him the opportunity of punishing his faithless mistress with the first, and recovering his stolen treasures.

The hero of this undoubtedly eastern tale was already a Fortunatus in the germ, and his history attached itself without effort to the fancy, familiar in the west, of ‘a child of Fortune,’—*der Sælden kint*,—a ‘standing recipient of Good Luck<sup>2</sup>.’ The necklace and the cloth

<sup>2</sup>.  
*Story of  
Fortuna-  
tus.*

<sup>1</sup> Douce: Dissertation on the *Gesta Romanorum*, appended to his *Illustrations of Shakespeare*.

<sup>2</sup> Cf. ‘Fortune’s privates’ in Hamlet’s first conversation with Guildenstern and Rosencrantz.

found a parallel in two similar magic gifts, one at least of which was familiar to the oldest Teutonic mythology. The wishing-hat is evidently a last survival of that of the German Wish-God, Wuotan. The derivation of the inexhaustible purse is more puzzling<sup>1</sup>, and it is perhaps fair to ask whether, in an age unacquainted with cheques, the gift of boundless wealth could well have been made in any other way.

The substitution of the 'child of Fortune' for the father, Darius, of the purse and hat for the less familiar necklace and cloth, and the development of the story of their acquisition, as a sort of *Vorgeschichte* to the adventures of the son, produced the main outline of the present tale. Then ensued a complicated process of expansion and accretion, the details of which it is impossible to trace with certainty. It is not difficult however to distinguish two classes of addition, which probably indicate successive stages or strata in its growth. There are, firstly, traces, not very consistently carried out, of a wish to give the tale a religious and moral colouring which it originally lacked. Fortune's offer of wisdom as well as of wealth, her injunction to feed the poor, and the elaborate foundations which her *protégé* accordingly creates at Venice and at Cyprus,— '100 ducats income for each priest and tombs in the Minster for his parents,'—the character of Ampedo, the douce, law-abiding citizen unknown to the *Gesta* story, who serves as a foil to his flighty brother Andolosia, the

<sup>1</sup> Grimm refers it to the cornucopia of the Roman Fortuna: 'mundanam cornucopiam gestans' Amm. Marcell. 22. 9. Grimm, *Deutsche Myth.* II. 870, E. T. Zacher, on the other hand (u. s. p. 485), argues for a Celtic origin, on grounds scarcely more convincing than those urged by Görres for the Spanish source of the whole romance.

hermit who exhorts the latter in the crisis of his fate to fix his mind on heaven, and provides him with the healing fruit which his predecessor in the *Gesta* owed to accident, and lastly, his use of the fruit, not merely for the punishment of his mistress, which completes the ambition of the *Gesta* hero, but for her final cure:—all these things look like the attempt of a possibly clerical *rédacteur* to mitigate the frank worldliness of a tale, the hero of which not only openly wishes for wealth above everything else, but is led by it to a happiness which apparently leaves him nothing else to wish for.

And then the story seems to have fallen into the hands of some professed manufacturer of romance, who was only concerned to load it with exciting adventures. The early history of the 'child of Fortune,'—told in ten chapters, without any attempt to explain how he came by the privilege; the exploration of St Patrick's Purgatory (c. 15), the elaborate courtship of the Earl of Cyprus' daughter (c. 21), the endowment of the faithful servant Leopold (c. 23), Andelosia's adventure with the French lady (c. 32), the Nunnery Scene (c. 41), Agrippina's marriage to the Prince of Cyprus (c. 42), the intrigue of the two earls for the purse, the violent death of Andelosia and Ampedo, and the execution of the earls (c. 48),—are additions which simply serve to turn a fairy tale into a romance of adventure.

Such is the ultimate form of the *Volksbuch* of *Fortunatus*, the first in which we know it:—a romance of adventure, the two central figures of which, in spite of one or two undeveloped germs of moral criticism, are treated frankly as heroes, and followed through successive enterprises with triumph when they succeed and undisguised sympathy when they fail. Fortunatus' preference of riches to wisdom remains absolutely without

retribution; if Andelosia wastes his gifts he is allowed to recover them, and his violent death, far from being conceived as a retribution, is made the direct result of his own valour and the ill-conditioned envy of his rivals, and is avenged amid the sympathy of all concerned by the still more terrible death of his assassins. Wholly different was the treatment of the story in an English drama, to the consideration of which I now turn.

*Olde Fortunatus.*  
1596—  
1600.

The Comedy of *Olde Fortunatus*, printed in 1600, is the first extant representative of the *Volksbuch* in English<sup>1</sup>, as it is also the first extant work of its author, Decker. This text, however, the only one we know, is plainly far from representing its primitive form. It is the result of at least two transformations;—one thorough and laborious, though in the absence of the original difficult to exactly define,—the other hastily executed at a sudden and peremptory call, and with palpable unevenness of workmanship. The case was apparently thus. In Feb. 1596<sup>2</sup>, a play called the *First part of Fortunatus* began to run with great success at Henslowe's theatre. It probably dealt with only the first half of the story,—the history of *Fortunatus the father*<sup>3</sup>. Its attraction however, like that of most marvellous stories, rapidly wore off<sup>4</sup>; and it ceased to appear. Three years later, an attempt was made to revive it by adding the second half,—the history

<sup>1</sup> Of the later English versions, evidently fresh translations, not new editions of the old, some account will be found in the Appendix.

<sup>2</sup> Henslowe's date 'Feb. 1595' is Old Style.

<sup>3</sup> Not only is the original play described in the first entry as the *first part*, but Decker's is emphatically called *the hole history of Fortunatus*.

<sup>4</sup> Henslowe's Diary, ed. Collier, sub Feb. 3, 10, &c., '1595.' The takings were at first unusually large (£3 and more); but by May 24, they had fallen to 14s. and the play was withdrawn.

of Andelosia; and the task was put into the hands of a young playwright, Thomas Decker, who had been known for some two years to the London stage. Instead of merely writing a second part, however, he incorporated the whole contents in a single play, recasting for this purpose the already existing first part<sup>1</sup>. By the end of November, 1599, the work was finished, and on the 30th Henslowe sent him 20s. 'in full payment.' But the very next day occurred a critical event for the *Olde Fortunatus*. The play was ordered for performance at court.

Under these new conditions extensive alterations and additions were thought necessary, which apparently *The play composite.* occupied not less than a fortnight, and certainly cost half as much as had just been paid for the entire play<sup>2</sup>. It is clear therefore that the new work cannot have consisted merely, as has been thought, in adding the prologue and epilogue, though these were obviously a part of it; nor could such additions be naturally described as 'altrenges.' The key apparently lies in this phrase, together with the entry of Dec. 12, where Decker is said to have received the large sum of 40s. *for the eande of Fortunatus, for the corte.* In other words the alterations consisted in (1) a re-writing of a portion of the play, and (2) a substantial addition at the close. Now it happens that the last scene in the extant text corresponds, not only to nothing in the *Volksbuch*, but to nothing in the rest of the play, with the exception of

<sup>1</sup> That he did this is probable both from the resemblance in style, and from the sums paid to him for the work,—£6 in all,—the usual payment for an entire original play being £8.

<sup>2</sup> Henslowe, '31 Nov.'; Decker receives 20s. 'for the altrenges of the boocke of the wholl history of Fortunatus.' On Dec. 12, 40s. 'for the eande of Fortunatus, for the corte.'

two other scenes of the same stamp. In these three scenes, which bear the evident character not only of an after-thought, but of an after-thought conceived in just such circumstances as have been described, the two figures of *Vertue* and *Vice* appear as the rivals of Fortune in her originally unaided work. They plant the two trees from which Andelosia is to gather the sweet and bitter fruit; they woo him, as the Good and Evil Angels woo Faustus; and finally engage in a formal dispute for the mastery, closed by an appeal from Fortune to the greater 'Queen of Chance' before whom they stood.

I.  
*The  
tragedy of  
Fortuna-  
tus.*

Reserving for a moment the consideration of these scenes, let us briefly examine Decker's treatment of the original story. Two years' experience of writing for the stage had strengthened the instincts of the practical playwright, somewhat at the expense perhaps of the vein of genuine though somewhat crude poetry which he undoubtedly possessed. He accordingly revises the story without ceremony. The work of one of the most romantic of Elizabethans is in curious contrast in this respect with that of the coryphaeus of the later Romantics, Tieck, whose two colossal dramas on the *Fortunatus* story<sup>1</sup> are a monument of the devout industry with which the Romantic school was wont to torment the most insignificant details of an old legend into the semblance of poetry. The incoherent string of adventures which both poets found in the *Volksbuch* had to be turned into a rounded whole. Tieck does this by complementing, by piecing out. Phrases become speeches, paragraphs scenes. Decker seeks the same end, in the main, by cutting away. He chooses the three most piquant adventures of *Fortunatus*,—the presentation of the purse, the stealing of the hat, and his death. The whole of his early history

<sup>1</sup> *Phantassus*, Bd. III.

is omitted ; the play beginning when he is already 'olde,' and his two sons of an age to take up the tale at his death. Tieck, in the spirit of the straitest Romantic orthodoxy, begins like the *Volksbuch* with his early adventures in Cyprus. The adventures of Andelosia are less curtailed, and at certain points even amplified. The punishment of the faithless Agrippina by the horn-producing apples was a trait too congenial to Elizabethan taste to be neglected ; Decker has accordingly made the two courtiers Longaville and Montrosse share the fate of the princess ; obtaining at the same time a better ground for the vengeance which here as in the *Volksbuch* they wreak upon the sons of Fortunatus.

But there is another class of alterations in which a more *Influence* special influence is perceptible than the general needs of *of Faustus.* the stage. It is that of the tragedy of Doctor Faustus<sup>1</sup>.

It is easy to see that the parallelism of the two subjects was of a kind to suggest still closer approximation. Fortunatus, like Faustus, receives exceptional faculties from a supernatural power, and accomplishes similar feats by their help. If Faustus plays a trick on the pope, Fortunatus outwits the Sultan ; and Agrippina is won as purely by magical means as Helena. Both stories, again, display, like true legends, the completest indifference to distinctions of time and space, and therefore presented the same kind of difficulty to the practical playwright ; and since both plays meet the difficulty by the same means, only in a few cases to be exactly paralleled elsewhere, the example of the earlier can hardly have gone for nothing with the later. The 'chorus' in both is

<sup>1</sup> A slight trace of the same influence perhaps appears in Decker's *The Gentle Craft*, acted 1599, the year in which he revised the *Fortunatus*, where the travelling Shoemaker is made to practise his art in the city of Faustus.

used to tide over, as it were, the hiatuses occupied with rapid or otherwise altogether undramatic movement: Faustus' early life, then his journey to Olympus before the visit to Rome; Fortunatus' journey to the Sultan, Andelosia's robbery of his brother and capture of Agrippina<sup>1</sup>.

But a much more important point of contact remains. The elements of tragic motive inherent in the legend, though almost thrust out of sight by the discursive romanticism of the author of the *Volksbuch*, are in the play brought into a prominence unprecedented in the literary history of the legend. Fortune is not the benevolent fairy casting favours on her favourite child, but a stern goddess who confers them with contempt and calls him inexorably to account for their abuse. His very choice of riches instead of wisdom is made to assume the fatality of Faustus's pact with the devil, and to play the same part in his destiny; the prosperity to which it leads is as hollow as Faustus's, and is cut short by the same inevitable catastrophe. At the fixed hour Fortune appears, like Mephistophilis, to claim her victim; and his death-scene accordingly has, scarcely less than Faustus's, the tragic fascination which belongs to every sudden collapse of apparently boundless power. Like Faustus too, Fortunatus in the critical hour bitterly repents his choice; Faustus calls on Christ whom he had forsworn; Fortunatus begs

<sup>1</sup> Most probably just before Decker revised the *Fortunatus* Shakspeare in *Henry V.* (1599) had used the same piece of dramatic technique to tide over the rapid marches and wide extent of scenery required in a historical drama of war. Certain phrases suggest that this too was specially in Decker's mind: cf. especially 'this cockpit' of the first *Chorus*, with Decker's:

For this smal Circumference must stand,  
For the imagin'd Sur-face of much Land, &c.

to be allowed to take the wisdom which he had rejected<sup>1</sup>; Fortune inexorably replies, in language of which the Faustus-like colouring is undeniable:

‘Thou hadst thy fancy, I must have thy fate;’

and finally, with the aid of a company of Satyrs, drags away the body of her victim, as Faustus is carried off by Mephistophilis and his crew of devils. It is plain that a Fortunatus who ends in this way was imagined under influences wholly different from those which determined the romantic Fortunatus of the *Volksbuch*, whose death is only the natural and not unwelcome close of a career sated with success.

In the story of Andelosia, the tragic motive is also wholly due to Decker. To the author of the romance, as we saw, he is a hero to the last; his death is told with undisguised sympathy, and savagely avenged. To Decker, on the other hand, he is a prodigal who has spent his gifts in riot, *luxuriöse vivendo*; and his ruin becomes a retribution, of which Fortune is again the instrument:

‘Fortune forgive me, I deserve thy hate;  
Myself have made myself a reprobate.’

What now is the relation to this essentially (in spite of a profusion of Decker’s usual robust comedy) tragic story, of the detached scenes which were, in part beyond question, added ‘for the court’? In my view, as I have said, these represent a quite distinct theme,—the rivalry of Fortune, Virtue and Vice, or, to use a term steeped in the very odour of the court-poetry of the six-

2.  
*The  
Triumphs  
of Virtue,  
Vice and  
Fortune.*

<sup>1</sup> *Fort.* Take this again: give wisdom to my sonnes.

*Fortune.* No, foole, ’tis now too late: as death strikes thee  
So shall their ends sudden and wretched bee.

teenth century,—their successive *Triumphs*<sup>1</sup>. Only, it is to be noted that it is Virtue who now finally triumphs not only over Vice, but over Fortune, and who in the culminating scene pays the supreme compliment to the ‘dred nympe’ looking on :—

Vertue alone lives still, and lives in you,  
I am a counterfeit, you are the true<sup>2</sup>.

In other words, Fortune, who in the drama as originally planned, was herself the supreme arbiter of the world, bringing the destinies in her train, and overthrowing greatness at her good pleasure, suddenly falls into the position of one of a Triumvirate. As a supreme power she necessarily represented the forces of permanence and therefore stood in no hostile relation to moral good. Her parting injunction to the English king, which in the first version probably closed the play, expresses the wish of a Fortune at least tolerant of virtue :

England shall ne’re be poore, if England strive,  
Rather by vertue, than by wealth to thrive.

But Virtue personified, and a rival of Fortune, could not thus coalesce with her ; the two figures necessarily stood apart in sharp distinction, and it is curious to find Fortune, immediately after uttering this exhortation to Virtue in the abstract, discharge a bitter greeting to Virtue in the concrete, as she enters ‘crowned, with Nymphes and kings attending on her.’

How dar’st thou come  
Thus trickt in gawdy Feathers, and thus garded,  
With crowned Kings and Muses, when thy foe

<sup>1</sup> Cf. the *Triumphs of Love and Fortune*, pr. 1589, where the alternate triumphs of each rival are merged in the final triumph of Love.

<sup>2</sup> Decker’s Works, ed. Hazlitt, I. 173.

Hath trod thus on thee, and now triumphes so?  
Where's vertuous Ampedo? See, hees her slave,  
*For following thee this recompense they have*<sup>1</sup>.

When it is remembered that the latter passage belongs to the opening of the last 'triumph' scene, which both by Henslowe's testimony and by its direct allusions to the queen, undoubtedly formed part of the alterations for the court, we can hardly expect a more salient evidence than this of the nature of the alteration. In other ways too the resort to the Triumph-motive has injured the original simplicity and clearness of the story. If Vice and Virtue were to be effective rivals of Fortune, it was necessary to make room for them in the action, to provide achievements for them. This was done by making them the planters of the two trees, and the dispensers of the fruit to the doubting Andelosia. The fruits, which originally differed only medicinally, thus become emblems of a moral difference; and Andelosia's choice between them recalls the choice of Hercules, or that of Faustus between the rival solicitations of the Good and Evil Angels. The eating of the apples is accordingly taken to indicate a moral as well as a physical process, with the somewhat awkward result,—since those who taste the apple of Virtue are also the malefactors who murder Andelosia for the purse—that the triumph of Virtue lies in facilitating a breach of her own laws. Such inconsistencies, which it would be easy to multiply, show how distinct the process of working out the story of Fortunatus and his sons was from that of patching on to it this frigid and artificial allegory. There, as we saw, Decker, with the example of Faustus before him, showed himself keenly alive to the tragic capacities of the story: Fortune is the inexorable exacter, Fortunatus tastes the full fruit of his

<sup>1</sup> Works, I. 171.

error, and transmits it like the curse of Atreus to his sons. Here, on the other hand, the moral tension of tragedy gives place abruptly to the decorous and polite conventionalities of the Mask, to the genius of which a tragic ending was as uncongenial as tragic seriousness; Fortune, the merciless leader of destinies, dispenses a general pardon, Virtue forgets all natural resentment in her anxiety to triumph over her rivals, and the two murderers, condemned to the wheel by the mortal king<sup>1</sup>, are let off with the 'terrors of an evil conscience.'

The *Fortunatus*, in spite of its first success, cannot be said to have had any literary following. The play of the English Comedians (printed in 1620), though the work of Englishmen, does not strictly belong to English literature, and demands therefore merely a word of notice here. Like the rest of these barbarous pieces, long the sole representatives for the German reader of the great age of English drama, it is a meagre epitome of its original—which was undoubtedly Decker's play,—eked out however, at various points by direct quotation from the German *Volksbuch*.

Some twenty years after this effort of his early manhood, Decker took part with Ford and Rowley in the *Witch of Edmonton*. His old taste for dabbling in the supernatural (it is difficult to use any more serious term) had not left him,—we shall see another striking instance

<sup>1</sup> The contrast with the treatment of the *Volksbuch* is here instructive. The murderers are there actually executed. Decker therefore deviates from his authority, in the interest of the Mask-treatment, to soften their fate, as he had previously deviated from it, in the interest of tragic treatment, to make that of *Fortunatus* more rigorous.

of it in the next chapter; and it is probable that we owe to him the scenes in which it is perhaps not rash to detect one more gross reminiscence of the pact of Faustus. But the league by which Mother Sawyer swears away her body and soul to the fiend Dog in her own blood, belongs to an altogether more vulgar phase of popular faith. The fashion of superstition had in fact changed, the realm of the imaginary itself was affected by the growing realism of the time, and the magician of legend was yielding the stage to the Witch of real life. In turning, as we now must, to the literature of Witchcraft, we shall involuntarily make a similar transition. It has been possible to deal with stories of magic, like *Faustus* and *Fortunatus*, with scarcely a reference to other than literary forces, but the literature of Witchcraft cannot be even discussed without some notice of the most horrible canker to which modern society has ever been a prey.

#### IV.

As the fourteenth century is, preeminently, the age of French, and the seventeenth that of English, witchcraft, so the sixteenth may be said to be that of German witchcraft. The lucid rationalism of the French Parliament had effectively restrained the persecution while its authority remained; and even after its complete subordination to the monarchy, it was only under the puerile and superstitious rule of Henry III. that the witch-trials recovered something of their former virulence and frequency. And England never knew the witch-fever in its most deadly and rabid form till the accession of a sovereign who possessed the talent of setting forth the mysteries of demonology in excellent Latin, and who

STORIES  
OF WITCH-  
CRAFT.

was impelled by a mixture of scholarly pedantry, kingly absoluteness and childish timidity, to send his hundreds to the rack and the stake. In Germany, however, the ferocity of the witch-trials in this century was equalled nowhere else. It was Germany too which made the most notable contributions to the literature of witchcraft. No more epoch-making books exist on the subject than the *Malleus Maleficarum* of Institor and Sprenger, and the *De praestigiis daemonum* of Weier,—the one the most authoritative and final assault upon the whole class of ‘sorcerers’, the other the first powerful, though qualified, effort in their defence. Bodin in France and Delrio in Holland produced more elaborate and skilful books; but they were deeply indebted to the *Malleus*, and the first English rationalist Reginald Scot was not less deeply indebted to Weier. The depths of infatuation and the greatest enlightenment and courage possible at the time were equally shown in Germany. The influence of the *Malleus* endured longer, and recovering from the temporary shock of Weier’s work, helped to promote the yet more terrible ravages of the next century; Weier was a brave but ineffectual precursor of the Tanners and Spees who two generations later, from the head-quarters of the Inquisition, attacked a plague which the Inquisition had contributed not a little to initiate, and prepared the beginning of the end<sup>1</sup>.

*The  
Malleus  
Malefi-  
carum.*

The *Malleus Maleficarum*, the chief object of the attacks both of Weier and Scot, was no merely theoretical work upon witchcraft. It was compiled by two of the most active and fanatical of Inquisitors, as at once a text-book and a defence, of their procedure; and its force lay less in its arguments or in its learning, which were poor enough, than in the extraordinary array of detailed

<sup>1</sup> Soldan-Heppe: *Die Hexenprozesse*, c. 23.

cases with which they confirmed every position. It was the manifesto of a war which they were themselves waging; a laborious attempt to extort the acquiescence if not the approval of Christendom for the new crusade. They prefaced it with the Bull in which Innocent VIII. three years before had given them extraordinary inquisitorial authority over the greater part of Germany<sup>1</sup>. This Bull declared that Germany was infested by a number of persons of both sexes, who, rejecting the Catholic faith, had entered into relations with demons, and by their aid were spreading mischief far and wide; destroying corn and vine, sheep and oxen, and making the productive powers of the earth, of animals and of man, barren and unfruitful. Some persons moreover had been found who resisted the just punishment of these sorcerers at the hands of the inquisitors. Over both classes an absolute authority, from which the highest princes of the Church were not to be exempt, was given to Institor and Sprenger; and it was declared heresy not merely to practise witchcraft, but even to be opposed to its punishment. 'Haeresis est maxima, opera maleficarum non credere.' Even the Bull however did not make their work entirely smooth; and the *Malleus* was accordingly designed to bear down what remained of opposition, as well as to supply a text-book for other inquisitors.

This double aim is reflected in its arrangement. It is divided into three parts, of which the first deals with the theological theory of witchcraft, the second with its practical effects and remedies, the third with the legal procedure proper in investigating and punishing it<sup>2</sup>.

<sup>1</sup> Cf. the Bull, *Summis desiderantes*, in the *Malleus*, ed. 1487, etc.; also in Soldan-Heppe, I. 269.

<sup>2</sup> On the title-page the book is declared to be 'praecipue:

Three agencies concur, it is said in the first division, to produce the effects of witchcraft: the demon, the *maleficus*, and finally, *divina permissio*. Then in successive *Quaestiones*, the cardinal points of the theory are one by one investigated. The doctrine of *succubi* and *incubi*, on which so much of the popular terror of the witch depended, is naturally affirmed unconditionally, and the doubt, 'whether it was catholic to assert that human beings could be produced in this way,' decisively rejected<sup>1</sup>. Then, by a process of exhaustion, the writers refute the supposition that some other powers than demons may be concerned. For neither *humana malitia* (Qu. 3), nor the *motores orbium* (Qu. 4), nor magic words (Qu. 5), nor the powers of the stars are capable of the same effects. The second division unfolds in detail the mysterious practices of the Witches: their pact with the Devil and its loathsome accessories, the nightly flight to the meeting-place, and the countless ways of injuring which they practise by his means. The third division lays bare the extraordinary system of procuring evidence and the not less extraordinary rules for applying it. Both were used and abused, if they were capable of abuse, to the utmost extent, nor could the inquisition have been carried on without them. It was through this system and these rules that the material on which the court worked was always forthcoming, and that the supply of accused persons even exceeded the enormous demand. No more ingenious device for making something out of nothing could have been found than the system of anonymous denunciation and examination by torture; and the inquisitors, by resorting to the worst methods of omnibus inquisitoribus et divini verbi concionatoribus utilis et necessarius.'

<sup>1</sup> *Quaestio* 3.

ancient criminal procedure, effectually secured themselves against any lack of employment. Their whole work was a process of reaping what they themselves had sown, and sowing what they intended to reap.

It was inevitable too that an organised inquisition such as this, armed with powers so boundless and so arbitrary, could not leave either the theory of witchcraft or the social status of the witch, as they were. On the one hand, there arose a sort of orthodox doctrine of witchcraft, based upon the inspired pages of the *Malleus Maleficarum*; a mass of floating popular superstitions became a coherent and systematic theory; ideas purely local, or out of keeping with the rest, were dropped, and those that were everywhere implicit in the popular conception were dogmatically formulated. The witch became the most distinct of personalities, with attributes every one of which was affirmed by the authority of the Church and the affirmation supported by her most terrible sanctions. And, on the other hand, while the belief in witchcraft was defined, it took hold of the popular mind with unprecedented force. The unscrupulous use made by the inquisitors of their power, far from raising general suspicion, apparently only confirmed the insane credulity which made the flimsiest accusation outweigh in the popular mind the strongest evidence of innocence. Every chapter in the *Malleus* became a text to which new victims owed their fate, and which supplied a sort of divine warrant for new accusations.

Thus the *Malleus* acquired a double distinction in the modern history of civilisation. It laid down a conception of witchcraft which has become classical in literature, and, if it were not for one deviation of supreme significance—*Macbeth*,—might even be called universal; and it started the frenzy of witch persecution

on the career in which for two hundred years it hardly relaxed.

The *Witch* thus systematically defined bore few evident traces of the mythology of which she was a degraded representative. Though abundance of genuine Teutonic mythology may be picked up from the examples which strew the pages of the *Malleus*, to such things it is itself entirely indifferent. It deals only in the grosser ideas which, though traceable in germ in some Norse myths, were first made prominent by the well-meant efforts of the Christian priesthood. The Norn, the Valkyre, the Waldweib, are lost in the familiar and hideous caricature; Wuotan becomes frankly the devil; the free service of the god by the warrior-maidens turns into midnight gatherings devoted to the grossest kind of intercourse. The notion of a pact made by the witch with the devil, and of her sexual relation to him,—both unfamiliar to their prototypes,—came to occupy the very centre of the doctrine of witchcraft; and the literature of the subject teems with repulsive tales of *succubi* and *incubi*,—a horrible chapter of superstition which the German imagination accepted but which it cannot be accused of originating<sup>1</sup>.

*The Opposi-*  
*sition.*

The fever which, under the powerful stimulus given by Institor and Sprenger, invaded Western Europe, was

<sup>1</sup> As Reginald Scot suggests (*Discovery of Witchcraft*) much was probably due to the text: 'Viderunt filii dei filias hominum, quod elegantes essent; acceperunt sibi in uxores ex omnibus quas elegerant.' On the relation of the Witch to Teutonic mythology, cf. Grimm, *Deutsche Mythologie* 992 ff; Simrock, *Handbuch d. deutschen Mythologie*, § 129. The caldron and the stick probably derive from the sacrificial caldron and staff of the priestesses of Freyja; to whom also the cat, so habitually associated with witchery, was sacred. On the other hand the Teutonic element in the witch superstition is almost wholly ignored by Soldan-Heppe, *Die Hexenprozesse*.

not soon to be allayed. From the first, however, a few voices were raised in vain protest; in the middle of the century Johann Weier (Wierus) created for a time an effective diversion, which was not confined to his native country; and though the ample learning of Bodin and the skill and tact of Delrio renewed the *prestige* of the doctrine of witchcraft, an unconvinced though by no means noisy minority continued to dissent.

The opposition had principally three grounds. In the first place, just suspicion was aroused by the gross and injudicious unfairness with which the trials were carried on; by the gross venality of the inquisitors, their obvious preference for wealthy victims, their open encouragement of those who denounced them, their savage eagerness to convict, tempered only by the prospect of some better way of gratifying their avarice, or by their craven fear in the face of popular indignation. This was obvious to every calm observer, even to those who entirely shared the *Malleus'* view of witchcraft in theory. Cornelius Agrippa succeeded in rescuing an unfortunate prisoner from the clutches of an inquisitor by the mere cogency with which he insisted on the want of evidence. Cardan argued the hollowness of the inquisitors' case from their shameless persecution of wealthy Protestants as long as it was safe, their prudent abstention where they saw no prospect of gain. Weier and Scot both quote this passage with approbation.

Further, came the progress of positive science. Hardly any one yet dreamed of wholly denying diabolic, still less divine, participation in nature; on the other hand, under the auspices of men like Telesio at Naples, an incipient natural science was beginning, however unconsciously, to narrow the limits of the marvellous. Between the region of diabolic agency and of

comprehended law, a middle region was recognised, in which phenomena were brought about, by human means indeed but still by aid of mysterious processes and occult qualities revealed only to profound study. This was the region of magic, closely related on the one hand to sorcery, in which phenomena of the same sort were accomplished by supernatural aid, on the other to natural science, in which ordinary intelligence sufficed. Of this sort of natural science, a branch in which Italians of every class had great proficiency, was the action of *poisons*; and so comprehensive was the inquisitorial view of sorcerers that it was not superfluous to distinguish from them even these. Tritheim's classification is very instructive. He distinguishes virtually three classes<sup>1</sup>: (1) those who do injuries by natural means, poison, &c.; (2) those who use mysterious words, charms, &c.; (3) those who either use the co-operation of demons, without having given themselves into their power, or who enter into an actual *pact* with them<sup>2</sup>. This distinction is highly characteristic of the confused and compromising attitude of the Rationalist reaction, in which Tritheim himself,—a firm believer in witchcraft,—must be denied a place. Scarcely any one was bold enough to deny diabolic agency altogether; if it was excluded in one region, it was allowed only more unlimited scope in another. In no one is this more striking than Weier, who passes, fairly enough, for one of the pillars of the reaction. His distinction rests wholly on his treatment of witchcraft in the narrowest sense,—the imputation of diabolic practices to old women. That there are sorcerers who deal in such practices he is perfectly convinced, and towards them, as well as the

Weier.

<sup>1</sup> Actually four; but the two last are rather subdivisions of one.

<sup>2</sup> *Antipalus Maleficiorum*; cf. Silbernagel, *Tritheim*.

poisoners, he is not a whit more merciful than the inquisitors themselves. In the demoniac world he is not only a fanatical believer; he boldly enters upon a detailed description of its contents, divisions, territories and population, which he enumerates with the utmost precision<sup>1</sup>. Quite in a different spirit is his treatment of *witches*. Two things he sees are necessary. The belief that 'witches' fly in the air and hold intercourse with the devil has to be refuted, and its existence has to be explained. For both sorts of explanation his own experience as a physician served him in good stead. Thus he not only applies a rough but effective criticism to the witch stories,—asking, for instance, with characteristic *Derbheit* (apropos of the 'witch-broth' composed of dead children boiled to jelly), 'How dead, stinking flesh could have such power?'—but tries hard to account for the story by a discussion of the nature of imagination, illustrating with some resource its liability to delusions. He quotes e.g. the *Natural Magic* of Baptista Porta<sup>2</sup>, to show how certain drugs produce a sleep in which occur dreams 'of travelling over sea and mountains—und allerley ander lügen'; and tells a story of an old woman who had been treated with the drug, and whose persuasion, when she awoke, of the reality of her travels was so absolute that no arguments could shake it. At the same time, with characteristic inconsequence, Weier introduces the hypothesis that the devil is capable of producing these illusions, and that many of those which occur are so produced; thus supplying the more skilful of his opponents, such as Delrio, with a weapon of which they did not fail to make use; for

<sup>1</sup> 7,405,926 is the total number of demons; they are subject to 572 princes.

<sup>2</sup> Weier, *De pr. d.* II. 34.

diabolic agency, however remote, being once admitted, it was impossible to rebut the practical conclusion of the witch persecutors except by asserting that one might be in a certain degree implicated with the devil without deserving death, which few persons were then prepared to do. Hence Delrio was able to make a show of magnanimous impartiality in admitting, like the rationalists, that much witchcraft was mere delusion, since the casuistry of the Inquisition was quite equal to maintaining the equal guilt of being the involuntary subject of demoniac powers, and of deliberately engaging them.

R. Scot. Reginald Scot followed the same lines<sup>1</sup>. Though not a physician himself he held enlightened views about medicine, and was acquainted with the German medical works which were so freely imported during this century. He quotes from Fuchsius, for instance, an explanation of the *incubus* or mare. He attempts to account for the belief in them by the text *viderunt filii dei filias hominum quod elegantes essent*, &c. He brands the folly of the interpreters of dreams<sup>2</sup>; and though he allows certain kinds of 'divination' to be lawful, it turns out that he only means that innocent form of prophecy which foretells the weather<sup>3</sup>.

Equitable law and scientific medicine both helped to raise the protest against the abuse which was so flagrant an offence to both: something is also due to the rise of a more spiritual theology. Protestantism has indeed, on the whole, not a whit less to answer for than Catholicism in respect of the witch-frenzy; the horrors of the perse-

<sup>1</sup> Scot was perhaps not the first Englishman to protest against the witch superstition. The Sta. Reg. Aug. 23, 1576, contains the entry of a book called 'A warning against the superstition of wytyches and the madnes of madmen,' but the title is ambiguous.

<sup>2</sup> *Disc. of W.*, x. i.,

<sup>3</sup> *Disc. of W.*, ix. i., 2.

cutions in England and Scotland under James and Charles, in North Germany under such princes as the otherwise enlightened Heinrich Julius of Brunswick<sup>1</sup>, and in Sweden, fully equal the utmost barbarities known in Catholic countries. The total effect of Protestantism was assuredly not to diminish the dread of infernal agency, or to check in the smallest degree the morbid disposition to trace it in the most innocent human actions. On the contrary, it sensibly deepened the hold of the diabolic scheme upon the imagination by its abandonment of the religious safeguards devised by the Church. The *alt böse Feind* was at last in grim earnest, and the Protestant world fell upon those accused of dealings with him, with the kind of exasperation which might be looked for in a city swarming with invisible incendiaries and suddenly convinced that the ordinary channels of justice are corrupt. But while it only plunged minds of a superstitious cast more deeply into superstition, Protestantism nevertheless offered to calmer reasoners a formidable weapon against it, the value of which was already perceived, though it was reserved for the eighteenth century to put it to full use. The theory of direct and universal divine government which it opposed to the Catholic conception of a hierarchy of secondary powers, contained the germ of the view which later dissolved away diabolic agency altogether, and referred the supernatural exclusively to a single source. But already it showed a tendency to assert the direct agency of God where Catholicism had seen the activity of demons carried on 'with divine permission.' As the priest ceased to mediate between the worshippers and God, so, for minds of this class, the demon-world retired into the background, and the Creator was restored to

<sup>1</sup> Soldan-Heppe, u. s. II. 88.

direct relations with his work. Weier devotes the greater part of the first book of his *Præstigiæ* to a determination, in his minute style, of the limits to the power of the Devil. Chapter III. for instance, recounts 'what Satan cannot do,'—such as passing in and out of men at the desire of others, reading their thoughts, &c. Chapter IV. declares explicitly that the Devil is only the executant and servant of God; and that the magician can do nothing supernatural without other aid. To the witch-mongers he says in effect: your proceedings are futile, for the Devil is incapable of doing what you accuse the witches of accomplishing by his aid. So his follower Brentius, quoted by Scot: 'The imperial law condemneth them to death that trouble and infect the aire; but I affirme...that it is neither in the power of witch nor divell so to doe, but in God onelie.' Nowhere however is this view more forcibly stated than by Scot himself. 'Certainly it is neither a witch, nor divell, but a glorious God, that made the thunder.' And again, 'If all be true that is alledged of their doings, why should we beleieve in Christ bicause of his miracles, when a witch dooth as great wonders as ever he did?' And 'what an unapt instrument,' he adds elsewhere, 'is a toothles old impotent and unweldie woman to flie in the aier.'

It is to be noted that Scot regards his attack upon the witch trials as a distinctly Protestant work. In his eyes the witch persecution is a Catholic movement, defended by Catholic writers, promoted by Jesuits and Dominicans, sanctioned and encouraged by the Pope. This view was the more natural as the earlier Reformers had had to suffer from the zeal of the Inquisitors, who found it convenient to bring a charge of sorcery where it was not safe to charge with heresy<sup>1</sup>. And even in Scot's

<sup>1</sup> 'Sithens (says Cardanus) the springing up of Luther's sect,

day, though the persecutions of Protestants as such had declined with their growing power, the witch persecutions were substantially a Catholic instrument<sup>1</sup>. Within a very few years after his book appeared it was to become a thoroughly congenial weapon in the hands of Protestant superstition. In 1590 the decidedly Protestant Heinrich Julius kindled with new ferocity the flames which his father had allowed to burn more intermittently: James VI. of Scotland initiated the same work with his *Demonologie*: and in 1589, Henry IV. of France—Catholic only by policy,—was so far from remitting the persecution that it apparently surpassed that of Henry II. and did not fall short of that under Henry III., with which even Bodin had been satisfied<sup>2</sup>.

The rationalist opponents of witch persecutions had however another enemy to reckon with, less terrible in appearance than the Inquisitors with their array of arguments and their practical power of enforcing them, but less easy to vanquish because employing a more spiritual weapon. Both Weier<sup>3</sup> and Scot loudly denounce the poets, whose vivid pictures of witchcraft had stamped the belief in it deep in the cultivated mind, and strengthened the instinctive superstitions of the more ignorant. Horace's Canidia and Vergil's Sibyl had played quite as momentous a part in the history of superstition as in that of literature<sup>4</sup>; and the revival of letters, in making them

in litera-  
ture.*

these priests have tended more diligentlie upon the execution of [the sentences], because more wealth is to be caught from them.'

<sup>1</sup> On the single prince of the empire who was charged with witchcraft, see Röse, *Joh. Friedrich von Sachsen*. [A. W. W.]

<sup>2</sup> Soldan-Heppe, II. 161.

<sup>3</sup> Cf. Weier's remark: Wie grosser und kunstreicher Poet, wie herrlicher lügner, &c.

<sup>4</sup> Cf. also Lucan's Erichtho in Marston's *Tragedie of Sophonisba*, IV. I. [A. W. W.]

better known, did not diminish their authority. Among a wider circle the mediaeval romances, transformed into prose *Volksbücher*, kept alive some memory of the vast apparatus of mediaeval magic. Men who freely exposed the shams of alchemy and astrology had no word against the more terrible sham of witchcraft. Brandt has a chapter against the 'achtung des gestirns' 'by which every fool guides his life,' but none against the fools who pursued witches. Ariosto's scathing picture of a conjurer in *Il Negromante* had no companion-piece, nor did his greatest successor in this field, Ben Jonson, follow up his *Alchemist* with any exposure of the more deadly social scourge. Fischart, who imitated Rabelais in making merry over the makers of sham almanacs<sup>1</sup>, also followed Bodin in his furious assault upon Johann Weier, and assisted in a new and revised edition of the *Malleus*<sup>2</sup>. Nor was there the slightest reluctance to make poetic and dramatic capital out of the witch superstition. The keen instinct of the English playwrights seized unhesitatingly upon a subject so rich in those combinations of crude realism and supernatural horror which were the 'dear delight' of an Elizabethan audience. Middleton's *The Witch*, Heywood's *The Lancashire Witches*, and the *Witch of Edmonton* are three prominent examples in which the witch superstition was treated with entire realism and with entire faith. Rationalism in this as in other subjects lay beyond the province of the playwright. Scot's book was evidently well known to Middleton and Heywood, but they calmly disregarded its arguments and utilised its facts. As a store-house of facts indeed it had no rival in England,

<sup>1</sup> Fischart, *Aller Praktik Grossmütter*, 1572.

<sup>2</sup> Bodin, *De Magorum Demonomania*, translated by Fischart, 1581; *Malleus Maleficarum*, Frankfort, 1582.

and became for at least a generation a classic manual of Witch-literature for English readers. As Scot had drawn freely from the German assailants and exponents of the doctrine, it would not be surprising to find this or that trait from the *Malleus* or Weier occurring in the work of the English dramatists who used him; and in fact it is easy to show that more than one stone which had been hewn out of the quarries of Germany and hurled to-and-fro in her literary battles, finally took its place, more or less newly wrought, in the fabric of the English Witch-drama<sup>1</sup>.

In Middleton's *The Witch*, we have not merely isolated traits derived ultimately from the German inquisitors, but a group of witch figures substantially copied from a similar group which actually existed in Germany early in the fifteenth century. The Suabian Dominican Nider was the first to tell the story, in his book on the *Maleficæ* written about the time of the Council of Constance. It is repeatedly referred to in the *Malleus*. A certain sorcerer named Stafus, living in the diocese of Lausanne, was captured, forced to confess, and put to death. He left a disciple Hoppo, who after

Middleton: *The Witch*.

<sup>1</sup> I may dismiss in a note an instance genuine so far as it goes, but too slight to dwell upon. The author of the *First Part of Henry VI.* knew his Scot well, and several touches in his portrait of the Pucelle carry us back through him to the German assailants and the German exponents of the doctrine of witchcraft. Douce has already pointed out that the terms of the Pucelle's last desperate appeal (1 *Henry VI.* v. 3), are derived from Weier through Scot (*Illustrations of Shakspeare*, II. 5):

You speedy helpers, that are substitutes  
Under the lordly monarch of the north,  
Appear, and aid me in this enterprise!

The 'monarch of the north' is Zimimar, one of the four principal devils who each commanded one of the points of the compass.

Stafus' death raised a certain Stadlin or Stadio<sup>1</sup> to the dignity of witch-master. Together the two proficient<sup>2</sup> perform the marvels of their art,—produce hailstones and noxious winds, cause children to fall into the water before their parents' eyes, transfer a third of their neighbours' corn and dung to their own barns, &c. Stadlin as well as the master Stafus was captured, and confessed his misdeeds<sup>3</sup>. Hoppo's end is not recorded.

This story was substantially repeated by Scot, with the important difference, however, that he represents all three sorcerers as operating together at one time. 'It is constantly affirmed,' he tells us, 'in the *Malleus Maleficarum*, that Stafus...had a disciple called Hoppo, who made Stadlin a maister witch, and could *all* when they list invisiblie transferre the third part of their neighbours doong . . . into their own ground, make haile tempests and floods with thunder and lightning,' &c.<sup>4</sup>

It was in this form that Middleton, in quest of material to add pungency to an Italian intrigue, read the story<sup>5</sup>. He took over the group of three from Scot, but with several changes. The male wizards become old women, conformably with the superstition which discovered witchery more readily in the sex which was most exposed to the seductions of a masculine devil. Thus he speaks of 'grannam Stadlin.' The masculine name of the principal, Stafus, is accordingly altered to Hecate,

<sup>1</sup> *Mall. Malef.* 'Stadio' in I. 15, 'Stadlin' in III. 6. Dyce, in his edition of Middleton, already gave the reference.

<sup>2</sup> 'hi duo' says the *Malleus*.

<sup>3</sup> *Malleus*, pt. II. qu. I. 6.

<sup>4</sup> *Discovery of Witchcraft*, XII. 5.

<sup>5</sup> In the story of Belleforest (No. 73), Rosamonde simply poisons her second husband Helmige (=Almachildes) without recourse to witchcraft.

and she is at the same time provided, like Shakspeare's Sycorax, with a son, a Caliban without pathos and without poetry, the foul and brutish Firestone<sup>1</sup>.

The group, Hecate, Stadlin and Hoppo, thus represent the original Stafus, Stadlin and Hoppo of the *Malleus*; Stadlin's powers combine those of the original Stadlin and Hoppo:

Stadlin 's within;  
She raises all the sudden ruinous storms,  
That shipwreck barks and tear up growing oaks.

Hecate, finally, is a much more important figure than her Shakspearean counterpart. She does not merely intervene at rare intervals in the meetings of her inferiors, but mingles familiarly with them at all times. Shakspeare's Hecate is a queen, hedged about with the sombre divinity of the lower world, and gaining a certain majesty from the comparative passiveness of her part. Middleton's is an active ruler of her domain, ordering all that is done there, superintending the goings-out and the comings-in, and receiving all visitors in person. Macbeth is hailed only by the three weird sisters, and never sees their more dreadful mistress; his counterparts in Middleton, the lover seeking to make his betrothed's marriage unfruitful, and the Duchess plotting her enemy's death, are honoured with familiar consultations by the prosaic Stafus-Hecate of the younger poet. In a word, Middleton's Hecate is as essential to the plot as Shakspeare's is otiose.

It is well known that this otioseness, among other things, has been made the ground for denying Hecate a place in the original version of Macbeth<sup>2</sup>. I am inclined

<sup>1</sup> Like Caliban he is called 'moon-calf.'

<sup>2</sup> Clark and Wright: *Macbeth*, Introduction.

to accept that view. Few passages in any mixed play of Shakspeare's make a stronger impression of interpolation than the first appearance of Hecate (III. 5), so gratuitous, so wholly unprepared for, and so entirely unexcused by an adequate motive. For the motive which she actually alleges is, on any hypothesis, feebly invented. She, 'the mistress of your charms,' 'the close contriver of all harms,' has been neglected at the very moment when a golden opportunity occurred of showing 'the glory of our art.' But the 'close contriver' might certainly be expected to be on the spot when any business so important as the meeting with Macbeth was arranged, which we know was not impromptu<sup>1</sup>; and if by any accident she was not, what is this petty accident or this petty cabal to the reader of *Macbeth*? Hecate may have good grounds for her injured vanity, but they can hardly have seemed sufficiently relevant to account for her otherwise unprovoked appearance, except to a dramatist who was intent at all costs on making her appear. And if it be said that she enters also in order to prepare the apparitions which subsequently appear in the second scene with Macbeth, it can scarcely be supposed that the apparitions could not have been otherwise accounted for. The weird sisters of the first scene know apparently of no limit to their power, and no superior;—'The three weird sisters hand in hand, Posters of the sea and land, Thus do go about, about;' they are to all appearance genuine representatives in a clouded and obscure form, of the mystic Norns; and the intrusion, almost at the eleventh hour, of a fourth is as incongruous as it is superfluous.

It must be added too that, unlike as the functions of the two Hecates are, they have a trait in common,—one

<sup>1</sup> Sc. 1: 'Where the place?—Upon the heath.—There to meet with Macbeth.'

wholly foreign to the Witches of Shakspeare. The Hecate of *The Witch* indulges unequivocally in the gross passions which the witch superstition, with peculiar loathsomeness, regularly attributed to its victims. Fire-stone is her *incubus*; if she gives Almachildes her aid it is with a view to his love, while her profession of Sebastian,

I know he loves me not, nor there's no hope on't.  
Tis for the love of mischief I do this,

equally implies that, in her view, such love was the natural payment for her services. The Hecate of *Macbeth* has no amours of this kind; but she nevertheless in a single phrase indicates precisely this view of the nature and reward of her calling: 'All you have done Hath been but for a wayward son, Spiteful and wrathful, who, as others do, Loves for his own ends, not for you<sup>1</sup>.' Those words, slight as they are, stand alone in the play: they are the glimpse of the cloven foot, the isolated hint of the vulgar theory of witchcraft, intruded not merely without any support in the remainder of the play, but in grotesque contradiction to the evident relations of the witches with Macbeth. Hecate was doubtless only confusedly remembering the passions of her own Middletonian phase when she startled the weird sisters with this warning against illusions hardly natural to those who 'seem not like the inhabitants of earth.'

I regard the Hecate of *Macbeth*, then, as a link, probably the last, in a series which opened with the story told for a ferocious practical purpose by the authors of the *Malleus*, repeated thence in the interests of fair play by Weier and Scot, and made by Middleton the groundwork

<sup>1</sup> This passage has of course been repeatedly noticed before. Cf. esp. Messrs Clark and Wright, *Macbeth*, Introd. p. x.

of a drama. The links may be slight, but it is not to be forgotten that the drama which this German story supplied with one element of its plot, was probably the first attempt in English to put a witch-subject to dramatic use. Middleton, though he apparently kept back his play for some years after it was written, was in this respect a pioneer. Others rapidly came forward to work along the same track; with one exception, however, they drew their witch scenery as exclusively from contemporary English society as their dramatic art from the contemporary English stage. That exception requires a brief notice.

Heywood  
(assisted  
by Brome):  
*Lancashire  
Witches.*

In 1634 Thomas Heywood embodied in a drama one of the principal events in the history of English witchcraft,—the great Lancashire trials of the previous year. The play which resulted,—the *Lancashire Witches*,—is interesting partly because it combines the two kinds of dramatic incident in which Heywood was most at home,—the domestic and the mythological. It unites a motive akin to that of the *Woman killed with Kindness* and the *English Traveller* with others drawn from that world of superstition and occult art of which Heywood had all his life been a persevering student and in which he was probably more deeply versed than any of his fellow dramatists. The character of the erring and repentant wife he had made his own; and the peculiar tenderness with which he repeatedly touched it was evidently something more than the stock pathos of a clever playwright. Mrs Generous in the *Lancashire Witches* is the sister of the erring wives in the *Woman killed with Kindness* and the *English Traveller*. She is not seduced from her husband, as they are, by a human lover; but she yields to the fascination of the powers of darkness and becomes a witch. Generous, her husband, views her fault like his earlier counterparts, more in sorrow than in anger, and

when she meets him after the commission of her fault and confesses her guilt he forgives her in a scene little inferior to the corresponding scenes in which Mr Frankford and Young Geraldine receive the last penitent confessions of another sort of guilt. Popular superstition which forms the main subject of the play, was particularly well-fitted to enter intimately into a domestic drama. This application of witchcraft was essentially new in the drama. Middleton's witch and Decker's (the Witch of Edmonton) are outside the pale of society,—the one a dangerous sorceress, the other a despised though still dreaded outcast. Heywood, the dramatist of intimate family life, gives us the witch who is also wife and mother,—a motive far more capable of pathos than either, though it can hardly be called original at a time when the despised and outcast Mother Sawyers were not seldom followed to the stake by the active housewife and the fresh village maiden.

But the effect of this felicitously chosen situation was impaired by an incongruous episode drawn from Heywood's multifarious reading in German magical lore, one evidently a favourite with him, for it was already embodied in his vast repertory of supernatural learning, the *Hierarchy of Angels*<sup>1</sup>.

Johann Teutonicus of Halberstadt<sup>2</sup> is said to recount how he took vengeance on some arrogant comrades who taunted him with bastardy, by showing them the image of their own fathers,—not the lords or knights whom they took to be such, but much humbler recipients

<sup>1</sup> Book VIII. 512, Halliwell *Dict.* under this play.

<sup>2</sup> I am unable to give the reference for this story. Johann Semeca (Teutonicus) was a canonist and ecclesiastical dignitary of Halberstadt. His commentary on the *Decretum Gratiani* is the only one of his works accessible to me.

of their mothers' favours<sup>1</sup>. Such a story was quite congenial to the tendencies of the English drama, in which the triumphs of bastards had often been dwelt on with a curious relish of which the secret is perhaps to be found in Edmund's soliloquy. Whetstone is however a feeble successor of the doughty canon of Halberstadt. He is no magician, and the whole burden of contrivance is thrown, as may be supposed, upon his witch-aunt. By her aid Whetstone invites the gallants who have insulted him to a feast, pleasantly deprecating their shamefast apologies: 'What is that among friends, for I would fain know which among you all knows his own father?'—and triumphs like Teutonicus<sup>2</sup>.

<sup>1</sup> Such reproductions of dead heroes were of course among the commonest feats of the old magician, as of the new spiritualist. Not to speak of obvious instances, I may mention that Heywood himself had quoted in the *Gynaekaeon* (ed. 1601, p. 101), Weier's story of the magician who summoned up Achilles and Hector for the delectation of Maximilian I.

<sup>2</sup> *The Lanc. Witches*, Act iv. The further detail of this somewhat repulsive story may be given in a note:—

'But tell me, gentlemen,' asks Whetstone, at the close of the meal, is there any amongst you that hath a mind to see his father?' *Bantam*. 'Why who shall show him?' *Whetstone*. 'Thats all one, if any man here desire it, let him but speake the word, and 'tis sufficient.' *Bantam*. 'Why, I would see my father.' Thereupon enters the form of 'a pedant dancing to music;' the strains done he points at Bantam, and looks full in his face. *Whetstone*. 'Do you know him that looks so full in your face?' *B*. 'Yes, well, a pedant in my father's house, who being young taught me my ABC.'...Whetstone explains the circumstances to Bantam's confusion and his companions' merriment. 'Why laugh you, gentlemen? It may be more mens cases than his or mine.' The images of their fathers in fact follow, 'a nimble Taylor dauncing,' and a stableman with switch and curricomb. Lastly, Whetstone caps his triumph by displaying his own father, no menial like theirs, but a gallant. 'Now gentlemen make me your President,' he exclaims in triumph: 'learn your duties and do as I do.' His vanquished persecutors are

This isolated and insignificant story is only interesting as an indication of the complex threads of legend and learning which went to the making of the witch of drama even more than the witch of common superstition. The various departments of magic were not curiously distinguished. The sorcerer was plundered to enrich the witch, as the witch to enlarge the powers of the sorcerer.

In the chapter which I here close it has been continually necessary to trench upon an apparently remote branch of the subject, which the idiosyncrasy of the sixteenth century, particularly in Germany, brought into the closest touch with it. The dread of magic did not prevent it from calling up ludicrous ideas; the terrible sorcerer to one man was the ridiculous mountebank to another; the very extravagance of his feats made them laughable the moment they ceased to be imposing. Nay, in the same hands, the subject could become alternately humorous and awful without the slightest sense of strain; Faustus and Fortunatus use their giant's power like buffoons; from Faustus sealing his bond in his blood to Faustus making game of the pope, from the Ulenspiegel-like jests with the horse-dealer and the knight to one of the most thrilling death-scenes in literature, was a transition which assuredly neither German reader nor English spectator dreamed of resenting or finding strange. In the following chapter I propose to make the same transition, and to pass from what I have ventured to call the Faustus-cycle, to that literature of Jest which may be equally called, from its most national and on the whole most typical representative, the *Cycle of Ulenspiegel*.

at first inclined to resent this inversion of their position, but finally agree in good Elizabethan fashion to forget their differences in a revel.

## CHAPTER V.

### THE ULENSPIEGEL CYCLE.

German  
Jest-books  
of the 16th  
century.

IF the wit of a nation were measured by its industry in collecting good things, Germany might have met the famous question of the Père Bouhours with complete equanimity. No literature is richer than hers in those compilations of amusing anecdote of which the sixteenth century was everywhere so prolific, and which owed their extraordinary development if not their origin to the new

H. Bebel: *Facetiarum libri tres*, 1506 (pr. 1508).

J. Pauli: *Schimpf und Ernst*, 1519.

literary influence of the bourgeois class. The first stimulus indeed came from elsewhere; it was not the naïve grossness of a Nürnberg Fastnachtsspiel but the elegant and pointed grossness of Italian Humanism which served as model for the *Facetiae* of Bebel<sup>1</sup>; and the second great Jest-book, the *Schimpf und Ernst* of the monk Johannes Pauli, though owing much to Bebel, is still more closely related to mediaeval collections, such as the *Gesta Romanorum*, of moral *examples* for use in the pulpit. Bebel was the direct follower of the ardent and purely pagan Poggio; Pauli drew no small part of his work from the anecdotes which had lately been heard in Strassburg cathedral from the lips of the most

<sup>1</sup> Bebel's materials were indeed in great part German enough, adapted, with much trouble as he confesses, from native originals ('has nostras facetias, quas summa cum difficultate ad latinum eloquium commutavi'), but as a *raconteur* he is altogether out of the range of his successors.

remarkable preacher of the age, Geiler von Kaisersberg, as he illustrated its most famous moral satire, the *Ship of Fools*<sup>1</sup>.

But when some years later, this beginning was fol- *Later*  
lowed up, it was in a different quarter. Soon after the *Jest-books*.  
middle of the century the production of jest-books came suddenly into vogue; but their authors are now neither scholars, as such, nor monks, but genuine citizens, often of official standing, and their contents, though in great part founded on either Bebel or Pauli, retain scarcely a trace of the formal elegance of the one, and but few of the moral earnestness of the other. Jörg Wickram, town-clerk of Burgheim, one of the most attractive figures in the literary history of Alsace<sup>2</sup>, led the way; and he was rapidly followed by his fellow-Alsatians Jacob Frey, town-clerk at Maursmünster, and Martin Montanus of Strassburg; while across the Rhine the congenial vein was continued by Velten Schumann, Wilhelm Kirchhof, and Michael Lindener, the last-named one of the most extraordinary of the genial Grobians, the *'frommen, auserlesenen, bundten und rundten Schnudel-*

<sup>1</sup> Pauli's preface, like his title *Schimpf* (i.e. *Scherz*) und *Ernst*, well illustrates the middle position which he holds between the Facetist and the preacher: He has written with three objects, [1] *damit die geistlichen kinder in den beschlossenen klöstern etwa zu lesen haben, damit sie zu zeiten iren geist mögen erlustigen und ruwen,...* [2] *auch die uff den schlössern und bergen wonen und geil sein, erschrockenliche und ernstliche ding finden, davon sie gebessert werden; auch* [3] *das die predicanten exempel haben, die schleferlichen menschen zu erwecken, und lustig zu hören machen.* Pauli has been admirably edited by Oesterley in the Stuttgart Litt. Verein Bibl. Bd. 85.

<sup>2</sup> Cf. especially for his share in turning the romance into the modern novel, Scherer's *Die Anfänge des deutschen Prosa-romans* (Quellen und Forschungen, XXI.).

*butzen*,' who ever spent wit and learning in giving a literary flavour to filth. Rough and gross-minded as many of these men were, nearly all had a practical, and in its way a moral, purpose, commonly disclosed with more or less sounding epithets in their preface or title-page. Pauli had chiefly had in view his own clerical order, though not without a hope that his moral examples might benefit an unruly aristocracy. Wickram and his followers write explicitly in behalf of the merchant class of the towns. The rapid growth of luxury had produced not only ampler leisure, but a higher standard of social intercourse, a more deliberate cultivation of amusing talk. To the noble absorbed in war and hunting, to the peasant immersed in the wearing labours of the field, society meant little more than the uncere- monious drinking-bout that closed the day in castle or in tavern. But civic life brought with it countless occasions of more or less formal and involuntary intercourse, for which a store of '*Schimpfreden*,' '*boszen*,' '*spudeligen*,' '*grillen*,' '*tauben*,' and '*schwänke*,' was the best of equipments. The tedious sea-voyage, the long diligence journey across country to Nürnberg or Köln, or to the great national fairs of Frankfurt or Leipzig, the evenings spent in rough country inns (where supper, as we know, was often deferred till the last chance of more guests was gone<sup>1</sup>), the critical intervals of convivial intercourse in garden or banquet hall, the tavern, where folk sat, says Lindener, like a '*hültzner latern*<sup>2</sup>,' nay, even the

<sup>1</sup> Cf. the chapter on '*Deversoria*,' in Erasmus' *Colloquia*,—a chapter from which Scott drew nearly every detail of the tavern described in *Anne of Geierstein*.

<sup>2</sup> Erich Schmidt in *Allg. D. Biog.* art. '*Lindener*,'—a little master-piece (it is not much over a page) of combined wealth of detail and force of style.

brief emergencies of being shaved or taking a bath<sup>1</sup>, were all relieved by the possession of one of these compendiums of good things,—*Rollwagenbüchlin*<sup>2</sup>, *Nachtbüchlin*, *Rastbüchlin*, *Wegkürzer*, *Wendunmuth* ('turn away gloom'), *Gartengesellschaft*, as they were christened with pointed reference to their intended use<sup>3</sup>.

I have purposely begun with these miscellaneous collections of Jests from all sources, late in date and loose in form though they are, as more representative of the whole compass of German humour, than the more specialised groups of anecdotes which, like the *Histories of Amis* or *Ulenspiegel*, attached themselves to a single famous name. Even with this advantage however, it cannot be said that the national powers of humour appear either brilliant or versatile, and far less if we look only to that meagre fraction of the *facetiae* currently read in Germany which was actually produced there. It is a humour with no trace either of the caustic subtlety of Italy or the ease and gaiety of France, and wholly

*Characteristics of the German Jest.*

<sup>1</sup> Even Bebel had had the tedium of bathing particularly in view. Cf. the dedication of his *Facetiae* to an invalid friend, the Abbot of Zweifelden, then taking the waters:—'aggressus sum ea commentari et fingere...quae maxime in thermis agentibus idonea et grata esse existimo.'

<sup>2</sup> Like our 'railway-reading,' 'Eisenbahnlektur.'

<sup>3</sup> Cf. Wickram's *Rollwagenbüchlin*, 1555: *Ein neuws, vor unerhörts Büchlein, darinn vil guter Schwenck und Historien begriffen werden, so man in schiffen und auff den rollwegen, dergleichen in scherhäuseren und badstuben, zu langweiligen zeiten erzellen mag, ... Allen Kauffleuten so die Messen hin und wider brauchen, &c....* Frey, on the other hand, chooses the more romantic hours of the merchant's day for his *Gartengesellschaft* (1556): *Ein new hüpsches und schimpfflichs Büchlein...darin vil frölichs Gesprächs Schimpffreden, Speywerck....wie ye zu zeytten die selben inn den schönen Gerten, bei den külen Brunnen, auff den grünen Wysen, bey der Edlen Music, auch andern ehrlichen Gesellschaften, &c.*

alien to the fancy and pathos with which, since Shakspeare, it has tended to ally itself in England; it is the rough humour of practical jokes, or the simple humour of ignorant misunderstandings, or the gross humour of some unequalled feat of obscenity, some unmatched prowess at the table. To a great extent it turns upon mere class distinctions,—distinctions singularly inveterate in Germany, and no less palpable in her literature than in her history. A whole family of jests sprang from the casual, involuntary collision of divergent customs, unlike moral standards, unequal knowledge; foolish scholars come to grief at the University<sup>1</sup>, ignorant priests before their bishop or at the hands of some shrewd peasant of their own flock<sup>2</sup>, and the peasant himself in innumerable chance encounters with priest<sup>3</sup>,

<sup>1</sup> E.g. the amusing story of the Erfurt student who attempted to write verses like Hesus by *measuring* his lines (Lindener, *Katziperi*; Hub, *Die kom. Litt. des 16ten Jahrh.*, p. 334). Cf. *Wegkürzer* sig. c iii. (Hub, p. 325), of the ignorant scholar who appealed to Maximilian to be made doctor; *Schimpf und Ernst*, No. 95, of the Count whose ignorance of Latin put him to shame before the Pope; and countless others.

<sup>2</sup> One of the best of these is that (Wickram, *Rollwagenbüchlin* sig. D vii.), of the Pfarrer who required his people to substitute a low whistle for the candid but offensive *Du lügst*. In the course of a sermon on the creation, he committed himself to the statement that the Lord, after creating Adam, 'leaned him up against a rail.' A whistle interrupted him. 'Wie, du meinst ich liege?'—'Nein Herr, ich wolt aber gern wissen, wer den zun gemacht hat.' Cf. *Schimpf und Ernst* No. 585 (priest and citizen).

<sup>3</sup> E.g. the story of the shepherd who, having learned the prayer *Agnus Dei, miserere mei*, uses it a year later in the form 'O Hammel Gottes, &c.,' on the ground that the lamb by that time must have become a sheep (Kirchhoff, *Wendunmuth* I. 244, and long before, in our *C Mery Tales* No. 65). This class is particularly abundant in Bebel. Far more rarely do we get a glimpse of genuine peasant humour, as in the mock 'crownner's quest' held over the dead wolf

scholar<sup>1</sup> and citizen<sup>2</sup>;—a clear reflexion of the strong bias of town against country which animated both the writers and readers of their jests. Tales of this sort are like falling water,—they depend merely on a difference of level. The eccentricities of particular districts and professions supply another group;—the greed and uncouth dialect of the Saxon<sup>3</sup>, the eccentric theology of the Swabian<sup>4</sup>; the slyness of tailors, the incredible lying

(Frey, *Gartengesellschaft*, p. 69; Hub, p. 310), and the Rollwagen story of one who horrified the pious pilgrims to the shrine of Mary of Einsiedeln by declaring that she was his sister, having been, as he afterwards explained, the work of his father, a sculptor.

<sup>1</sup> E.g. the students' goose-stealing adventure, turning on rustic ignorance of Latin. An alarm being raised, *Habes?* asks one, *Habeo* cries the second, *Cito fuge* replies the first; and the peasant reports Messrs Citofuge, Habeo and Habes for the theft of his goose (Lindener, *Rastbüchlein*, p. 131, Hub, p. 346). Cf. Hub. p. 344, also from the *Rastbüchlein*, where a peasant casually drinking with scholars takes their festive *Prosit!* for an intimation that there is only *brosi* on the table.

<sup>2</sup> E.g. the peasant and the Strassburg barber (Pauli, *Schimpf und Ernst* No. 601); the price of shaving is a pfennig; the peasant demands to be shaved for a heller ( $=\frac{1}{2}$  pf.), the barber shaves one side of his face. Cf. the story of the peasants who came to a painter with a commission for a painted Christ. 'Would they have him painted alive or dead?' After consulting a while they reply 'Alive; and then if we don't like it, so können wir in selber wol zu tod schlagen.' *Schimpf und Ernst* No. 409.

<sup>3</sup> E.g. *Wendunmuth* I. 206, a Saxon in an inn takes fish for beans, and has to pay in proportion; *Rastbüchlein* LII. (Hub, p. 347), and many more.

<sup>4</sup> E.g. *Wendunmuth* I. 265,—a Swabian peasant dying, and indignant at the 'unreasonableness' of his death, appeals from God to the Apostles; and ib. 266, where another in the same circumstances, assured that *Gott einen allenthalben finden kann*, tests the assurance by concealing himself when the priest comes with the last sacrament. He cannot be found, the priest returns unsuccessful, and 'God' with him.

powers of smiths<sup>1</sup>, the solemn follies of village aldermen<sup>2</sup>. From the comedy of mere natural contrasts of usage, it is an easy step to the more brutal but more pungent fun of the practical joke in which these are deliberately taken advantage of. And it is this fun of the practical joke ('loser *Streich*,' '*Schwank*') which above all others forms the staple of German humour in the sixteenth century; so far indeed did it predominate over the rest that *Schwänke*—'pranks'—became a generic name for the whole tribe of jests<sup>3</sup>. It is here that the full force of German class-distinctions is felt<sup>4</sup>; the peasant and the priest, whose separation from the burgher society was the deepest, are still the principal victims; and after them, with a sprinkling devoted to scholars<sup>5</sup> and

<sup>1</sup> The somewhat cheap amusement of *Lügendgeschichten* was cultivated with extraordinary zest in Germany; but for the most part the result was merely extravagant nonsense, without the genuine humour of e.g. Heywood's *Four P's*. Cf. e.g. the tame conclusion of the parallel story of Six Students, who similarly compete in telling the greatest lie, *Nachtbüchlein* I. p. 39, Hub, p. 352. The *Lügendgeschichten* culminated in the adventures of the *Finkenritter*—an early Münchhausen—at the end of the century, as the *Streich* pure and simple in those of *Ulenpiegel* at its commencement. There is a large infusion of the *Lügendgeschichte* manner in the more directly satirical *Schiltbürger* tales.

<sup>2</sup> The famous *Schiltbürger* tales, a more classical form of our Gothamites, are the veritable epic of the rustic Dogberry.

<sup>3</sup> *Fest* (gestum), like *joke*, had itself originally, of course, a reference to practical *feats*; the 'gestes' of Robin Hood mark the transition, and correspond nearly to *Schwänke*.

<sup>4</sup> It is characteristic that in some of these books the distinction of classes is made the basis of the arrangement. Thus the first book of *Wendunmuth* proceeds from kings, nobles, doctors, students to merchants, innkeepers, boors, &c. : and Pauli's work is throughout arranged under headings which connect it with the *Narrenschiff* and the mediaeval genre of 'Satire on all classes.'

<sup>5</sup> One of the most celebrated is the story of the Magister of

soldiers<sup>1</sup>, come the various occupations within the ranks of the citizens themselves,—the innkeeper<sup>2</sup>, tailor<sup>3</sup> and miller<sup>4</sup>,—whose discomfiture has always tended to assume a comic air; while, very rarely, we have a glimpse of the sanguinary struggles of *Rath* and *Bürgerschaft* which made so much of the local history of the century too bitter for a jest-book<sup>5</sup>. It was such things which stirred

Wittenberg (afterwards dramatised by Ayrer) who ventured to put on the Fool's Cap under the protection of what he supposed an impenetrable disguise of paint; but the painter had used water only. *Wendunmuth* I. 139. Of a different kind is that—one of the host of 'Pennal possen'—*Schimpf und Ernst* (No. 679), where a student suspected by the Magister of his *Burs* of stealing a Vergil, is convicted by a kind of mock ordeal (a piece of cheese is given to all the students; the culprit will be discovered by his being unable to chew it; to ensure the result a stone is secreted in that of the man suspected).

<sup>1</sup> E.g. the story, also dramatised by Ayrer, and bearing an obvious analogy to a scene in *Twelfth Night*, how *Ein Schreiber bezahlt einen Trommelschläger*, viz. by making him the bearer of a letter which enjoins that he shall be treated as a madman. *Wendunmuth*, I. 142.

<sup>2</sup> E.g. the story of the guest with a box which at the table d'hôte he insists on keeping on the seat beside him. The landlord charges him twice for the extra place, upon which he fills the box with fish and fowl:—*ich muss imm auch zu fressen geben, denn er ist lähr worden* (*Katzipori* IV., Hub p. 332), and the well-known story *von dem gesang so die wirt gern hören*, *Wendunmuth* I. 192, from Bebel.

<sup>3</sup> E.g. '*Ein Schneider wil im selbst ein bar Hosen machen*,' and involuntarily scamps the work as if it were for a customer (*Wendunmuth* I. 231); cf. *ib.* I. 230–3. The story of *The tailor in heaven* (*Rollwagen*, Hub p. 300) is a particularly riotous piece of popular fancy.

<sup>4</sup> E.g. *Wendunmuth* I. 288. The rapacity and cunning of the 'molitores' is repeatedly touched by Bebel also.

<sup>5</sup> E.g. the story, rather a satirical fable than an anecdote, of the town where the younger citizens had expelled the older, with the exception of one who is secretly maintained by his son, and who

the loudest and most genuine laughter of sixteenth century Germany; successful tricks which paid off an old score or simply gratified unprovoked malice, 'jests' in which the element of mere horse-play almost always overpowered the wit, and sheer feats of audacious frankness in that region of mere nastiness and obscenity where, it has been said, 'comic ideas are to be had for the picking up by those whom they do not offend at the cost of those whom they do,'—a region which, it may be added, neither Wickram nor Frey, both of whom professed to write only what was fit for the ears of 'erbare Frawen und Junckfrawen,' by any means avoided.

*Schwank-*  
*heroes*  
(Amis,  
Ulen-  
spiegel,  
&c.).

But the *Schwank* was not only the staple of the ordinary Jest-book; it had its own more exclusive and select domain. No kind of anecdote more readily attaches itself to a familiar name; and the floating memory of some facetious friar or parson, some rustic Autolycus, some court-jester,—nay, of some altogether legendary hero of another age, became a depository for the unclaimed 'humour' of a whole country-side. A literary process of extreme slightness sufficed to convert these loose accretions into the popular books of adventure which go under the notorious and somewhat unsavoury names of Amis and the Kalenberger, Leu and Rausch, Ulenspiegel and Markolf, names which rapidly became current symbols for the genius of practical joking in all its moods and phases. Amis is the German counterpart of the famous personator of the Abbot of Canterbury: the Kalenberger is the facetious parish priest, who out-

recovers his authority by the thoroughly *Märchen*-like expedient of a lucky answer. The king tests the wisdom of the new Rath by inquiring the best means of preserving salt from worms: they are wholly at fault until advised, by the sole survivor of the old one, to reply with a prescription of mule's milk. *Schimpfund Ernst*, No. 442.

wits his parishioners, makes game of his bishop and extracts unintended bounties from his patron; Rausch, the young novice in the convent, who lays traps for the prior and the cook; Markolf, the foul but witty boor who paralyses the wisdom of Solomon with keen rejoinders and his modesty with the tricks of an unclean animal; Ulenspiegel, the knavish peasant, who retaliates on the haughty citizens with strokes in which the literature of the Schwank probably reaches its acme of fatuous insolence. In these homely yet vivid figures, and particularly in Ulenspiegel, the best known and the most purely national of all, the low life of the later Middle Ages of Germany lives before us; we hurry to and fro between tavern and workshop, highway and market-place, stable and scullery. Every line of Ulenspiegel vividly records the essential qualities of the society which made a hero of him; its gross appetites, its intellectual insensibility, its phlegmatic good humour, its boisterous delight in all forms of physical energy and physical prowess, its inexhaustible interest in the daily events of the bodily life, and the stoutness of nerve which permitted it to find uproarious enjoyment in mere foulness of stench. The whole interest of Ulenspiegel for us is social, not literary; all his jests together would scarcely yield a grain of Attic salt; we could not read the book but for the light which it throws upon a society which could and did.

Nor was the enormous success which these histories enjoyed at all confined to their native land. In no other chapter of her literary intercourse with Germany did England contrive to appropriate so large a proportion of the total produce as exactly in this, where the acquisition was perhaps of least value. If Markolf, by far the most interesting of all, has left but few and scanty

*Influence  
abroad.*

traces, Ulenspiegel, the most repulsive, met with a reception in the England of Edward and Elizabeth only exceeded by that which he had already found in the France of Francis I.; the Kalenberger was the subject of an English prose romance; while Rausch, in addition, became the hero of at least two celebrated dramas, and even won secure footing in our native folk-lore. To follow out the fortunes of these four figures in England will be the work of the present chapter.

On the other hand, Amis, Englishman as he was reputed to be, remained unknown in that *stat ze Tâmbis* where he was said to have lived; and Leu, 'the second Kalenberger,' did not share even the moderate popularity of the first. And of the whole series of miscellaneous jest-books which began with Bebel, it would seem that not one has left the slightest mark upon our literature, with the exception (to a very small extent) of Bebel himself<sup>1</sup>.

<sup>1</sup> Two stories in the *C Mery Tales* 1526 are drawn from Bebel: cf. No. 11, 'Of the woman that sayd her wooer came to late,' with Bebel, II. 69, *de quadam muliere citissime nubente post obitum primi viri*; and No. 83, 'Of the parson that sayd masse of requiem for Crystys sowle,' with ib. I. 7, *de inscitia cuiusdam sacerdotis fabula perfaceta*. Both are expanded, however, and probably separated by one or two removes of oral tradition from Bebel's text. Cf. Oesterley's edition of the Göttingen *C Mery Tales*, where the references are given.—In later days, a writer who loved the by-ways of literature, Thomas Heywood, laid Bebel under contribution for several of the stories in his huge repertory of curious things, *The Hierarchy of Angels*; the most pointed of which is that of one Daiglinus at Constanx, who remarked to a simple fellow that he would make an admirable *consul*, having hitherto so carefully husbanded his wisdom that none had escaped. Bebel I. 84, '*Proverbium in parum prudentes*.' Heywood seems not to have understood Bebel's farfetched version of '*Bürgermeister*.' Cf. also the story of an ass, p. 448. In regard to the later Jest-books of Pauli,

## I.

I have tacitly assumed Markolf to belong fairly to the MARKOLF. class of genuine Teutonic jesters, the Kalenbergers and the Ulenspiegels, with whom we are here solely concerned. The assumption however needs explanation, and the extreme complexity of the legend makes it impossible that this should be very brief<sup>1</sup>. In England, France, and Germany a very slender germ of common tradition underwent developments in part quite distinct, in part mutually reacting, and finally in the sixteenth century almost indistinguishably blended; and it is necessary to attempt their separation.

The perplexed problem of the influence of the Rabbinical traditions of Solomon is for the present purpose of little concern<sup>2</sup>; the questions of the Queen of Sheba,

Wickram, &c., the few stories which they have in common with such English collections as the *C Mery Tales*, the *Merry Tales and Quick Answers*, are explained by the fact that both used a common source, usually Bromyard. In other cases, where the source is unknown, the Englishman has priority, as in the story of *Agnus dei* (*C Mery Tales*, 67—1526, and *Wendunmuth*, I. 244—1563).

<sup>1</sup> In addition to Kemble's in some points inevitably antiquated but still classical introduction to the Old-English *Salomon and Saturnus* cf. esp. Schaumberg, *Salomo und Morolf* in Paul and Braune's *Beiträge*, Bd. II. 1 ff., and Vogt, *Die deutschen Dichtungen von Salomon und Markolf*, of which however only the first part, an exhaustive account of the minstrel's epic *Salman und Morolt*, is yet published.

<sup>2</sup> The question of source is solved by Brunet in the airy fashion characteristic of a good deal of French scholarship: '[le dialogue] est d'origine grecque ou plutôt orientale.' *La France Litt. au xv<sup>me</sup> siècle*, s. v. 'Salomon.'—The materials are hardly complete enough to admit of a final solution.

the riddles of Hiram, furnished at the most the general scheme of confronting the wise king with a rival or an interrogator<sup>1</sup>, a scheme which resolves itself at once into that, everywhere familiar in the west, of the *disputatio*. One form of such a *disputatio*, distinguished by its occasional high poetry and the mythic dignity of its characters, but not by essential form from the crowd of mediaeval catechisms and *Elucidaria*, is the Old-English *Salomon and Saturnus*, where Saturnus, as a 'Chaldaean Earl' of many travels and vast experience, probes the still vaster knowledge of the Jewish king on a variety of theological problems<sup>2</sup>. It shared however the general oblivion which overtook Old-English literature, and stands in complete isolation from the later development of the legend whether on the continent or in England itself. The essential steps in this development undoubtedly belong to the former. There the name Marcolf for the first time occurs in connexion with that of Solomon in the psalms of Notker, as engaging with the king, no longer, like Saturnus, in a disputation of the master and scholar type, but in a true polemical, yet still quite serious and decorous, debate<sup>3</sup>. The evidence of the earliest allusions in France, north and south, though slight, points equally to a discussion in which Marcolf is not yet the low jester Marcolf who ranks with Ulenspiegel and the Kalenberger, but a worthy antagonist, his rival in learning, whose name was wont to be coupled with his

<sup>1</sup> Cf. the arguments of Schaumberg u. s., who wholly rejects the notion of an oriental origin for the legend.

<sup>2</sup> Cf. Kemble u. s., and ten Brink, *Gesch. d. engl. Litt.* i. 113.

<sup>3</sup> Kemble u. s. p. 13; Schaumberg u. s. p. 33; 'Waz ist ioh anderes daz man Marcholfum saget sih *Ellenon* wider proverbiis Salomonis? An diên allen sint wort *scônîu* âne wârheit.'

in the proverbial praise of wisdom and fair speech<sup>1</sup>. And from the probable fact that a very early form of the dialogue received a clerical commentary<sup>2</sup>, it is probable that it dealt with theology, and that Marcolf was the ingenious champion of a disputed doctrine,—or, as the cleric Notker put it more strongly,—the pleader, in fair words, for an untruth.

With the twelfth century however, the conception of Marcolf begins to change. The rival of Solomon is degraded into his parodist; the decorous sage of fair speech becomes a boor, full of the gross though pregnant humour of the people. The poetical catechism, the serious debate, give place to a formal rivalry in shrewd sayings, a competition of homely mother wit with divine wisdom. The Latin dialogue in which this conception was first embodied, is no doubt substantially represented in the well-known *Collationes, quas dicuntur fecisse mutuo rex Salomo...et Marculphus*; in the oldest version this un-

<sup>1</sup> Cil que m'a vout triste alegre  
*Sab mais.....*  
*que Salomos ni Marcols*

Rambaut d'Auvergne, quot. Kemble and Schaumberg.

Mes de tant soit chescun certayn  
 Keu le monde nad si bon ecriveyn  
 ni fieust à tant comme Salomon sage  
*et com Marcun de bon langage.*

MS. Arundel 507, 81, quot. Kemble.

The latter testimony exactly coincides with Notker's *scônîl wort*. In the later dialogue he is still *eloquentissimus*, but in a manner less likely to attract either the poet or the preacher.

<sup>2</sup> Schaumberg agrees with Kemble in giving this very plausible interpretation to a confused description in the *Hist. litt. de la France*, tom. III. 565, of a MS. in the Bibl. Nat.: 'La quatorzième pièce est adressée à un nommé Robert, à qui l'auteur fait l'honneur d'un travail sur (les formules de) Marculfe et de commentaires sur (les livres de) Salomon, &c.' Schaumb., u. s. p. 35.

doubtedly consisted of the interchange of proverbs alone; the framework of narrative which encloses this in almost every known version, though it can be but little younger, is easily separable<sup>1</sup>, and belongs in part to a different school of humour.

A few words will suffice to characterise the former. Markolf's replies are in great part, as I have said, parodies, not less in style and manner than in matter. He mimics the solemn air of Solomon, and the comic effect is enhanced by the rhythmical balance which causes the successive pairs of saying and parody to recall to the ear the familiar parallel phrasing of Hebrew poetry. He utters ridiculous precepts relating to the least dignified parts of the body in the same gravely balanced antithesis which had just before conveyed a solemn ejaculation about virtue or understanding. What Solomon says of the temple or the council chamber, Markolf applies to the kitchen; regulations for men and women are copied for dogs and cats; spiritual analogies are followed out in the world of eating and digestion, or further still. Among these strictly parodic proverbs, however, are scattered others in which the contrast of peasant and king takes a less purely literary form, which we shall find made the principal motive of a later Markolf dialogue. The peasant Markolf as a poor man becomes a strict representative of his order; he is the boor, the *vilain*, liable to disastrous collisions with the rich and strong, and whose ethical code is a set of practical

<sup>1</sup> In the former for instance, we find Solomon alluding at the very outset to his famous judgment: *bene iudicavi inter duas meretrices quae in una domo oppresserant infantem* ('ubi sunt aures ibi sunt cause' replies Markolf); but in what the narrative shows to be the sequel, the whole scene is worked out in full, as if it had not occurred before.

maxims for steering his way with as few of such collisions as possible. He opposes the practical egoism of struggling men to the liberality, the 'courtoisie', of the *noblesse*. 'Many are they,' says Solomon, 'who return evil for good to their benefactors.' 'But he,' responds Markolf, 'who feeds another man's dog, gets no thanks.' 'He shall himself cry,' pursues Solomon, 'who turneth away from the cry of the poor.' 'And he loses his tears,' rejoins Markolf, 'who sheds them before a judge.'

The framework of narrative in which the wit-combat is embedded, is a succession of *Schwänke*, carried on for the most part in Solomon's court. The opening paragraph tells of his first arrival, and draws his portrait with a graphic minuteness of detail quite foreign to the ordinary narrative style of these books, in which the pause for description is unknown. He is 'short and thick-set, with a great head, broad, red, wrinkled brow; hairy ears that hang over his breast, big bleared eyes, horse lips, a goat's beard and hair, a stumpy nose, short fat fingers, and club feet; shod in country clogs of a piece with his dirty patched cloak and his scanty tunic.' The narrative falls into three sections or complexes of anecdote, which perhaps in part represent successive additions. The first (besides a coarse practical jest of the lowest Ulenspiegel type<sup>1</sup>) gives Markolf's explanation<sup>2</sup> of his own wisdom: on the day when Solomon as a boy had tasted the vulture's heart, his mother had thrown Markolf, then a child in the kitchen, its *skin*<sup>3</sup>. The second is chiefly occupied by the solution of Markolf's well-

<sup>1</sup> *Cap.* 'Marcolphus Salamoni regi ollam lactis plenam offert.'

<sup>2</sup> *Cap.* 'Rex Salomon...introscepit domum Marcolphi.'

<sup>3</sup> This is omitted in all the earlier German versions, and can hardly therefore belong to the earliest state of the narrative. Cf. Schaumberg, p. 4.

known paradoxes, and its consequences. Solomon challenges Markolf to watch a night with him. Markolf repeatedly sleeps, and on each occasion a dialogue of this type takes place: *Sol.* Dormis Marcolphe. *M.* Non dormio sed penso. *S.* Quid pensas? *M.* Penso nullam rem sub sole esse candidiorem die....*S.* Probandum est hoc<sup>1</sup>. A series of similar puzzles is thus accumulated, which on the following day he is called to solve. Milk he shows to be 'less white than daylight' by putting a bowl of it in the *dark*; 'nature stronger than education' by letting loose a mouse before the eyes of a cat which has been trained to hold a candle<sup>2</sup>, and 'women to be untrustworthy' by inducing his sister to give information that he carries a concealed dagger, with aims against the king's life; the search for it, naturally fruitless, speedily establishes his innocence,—and his thesis<sup>3</sup>. Indignant at this refutation, Solomon banishes him, with a threat that the dogs will be loosed upon him should he return: he obtains a hare however, sets it free before the dogs, who pursue it instead of falling on him, and presents himself once more unharmed before the king, who condones his audacity for the sake of his wit. With one other, somewhat grosser, piece of humour<sup>4</sup> this second section closes, and in at least one MS.<sup>5</sup> the entire story also.

In the rest there follows a fresh episode at court,

<sup>1</sup> *Cap.* 'Rex Salomon et Marcolphus per noctem vigilare volentes.'

<sup>2</sup> *Cap.* 'Marcolphus...ex manica mures decurrere permisit.'

<sup>3</sup> *Cap.* 'Ad regem Marcolphi soror vocatur.'

<sup>4</sup> *Cap.* 'Marcolphus in faciem calvi salivam spuit.' The bald man complains to the king, whereupon Markolph excuses himself: 'Non fedavi [frontem hujus] sed fimavi, *in sterili enim terra finus ponitur.*'

<sup>5</sup> Vienna cod. 3337. Schaumberg, p. 5.

ending like the former with a banishment, a threat, and a successful evasion. The first story gives a new turn to the familiar history of Solomon's judgment. Markolf rails at the king's easy credulity: 'a woman has infinite wiles,' and enforces his bad opinion of the other sex by spreading a calumny about the king's prospective legal reforms<sup>1</sup> which shortly brings the 7000 women of Jerusalem in fury to the palace to revile him. Impatient at their taunts, Solomon exclaims that he would rather live with dragons and lions than with evil women; Nathan urges moderation;—'we must answer fools according to their folly,' retorts the king. Markolf immediately starts from his place: 'Thou hast spoken my mind, Solomon: this morning you extolled women, now you revile them<sup>2</sup>.' In wrath at this treachery the king once more banishes his antagonist, who as before finds means to reassert himself by a coarse trick which nevertheless became one of the most popular incidents in the story<sup>3</sup>. Exasperated at the insult, Solomon orders him to be hanged. Markolf begs only to be allowed to choose the tree, and Solomon agrees. But to every tree which his guards suggest, he discovers excellent objections; and after

<sup>1</sup> A law that every man should have seven wives. The women are of an exactly opposite opinion: 'melius est ut una mulier habere septem viros.'

<sup>2</sup> *Cap.* 'Hic convenerunt mulieres ante regem Salomonem.' This chapter is in subject a repetition of the episode with Markolf's sister, and the mechanism by which the proof in each case is obtained is also analogous. Markolf beguiles the women to be unconscious witnesses against themselves.

<sup>3</sup> *Cap.* 'Hic Salomon venit ante furnum ubi Marcolphus jacuit.' The king had ordered him 'not to let him see his face' again,—'ne videam te in mediis oculis.' Markolf, in spite of his 'curta tunica,' lies down in the oven in the position best adapted to conceal his face.

leading him through Syria, Palestine and Arabia, they are obliged to return to Solomon and report that they had been unable to find any tree, though it were the olive of Jerusalem, or the cedar of Lebanon, on which Markolf *wished* to be hanged. Here in the longest Latin versions the story ends, adding only that he 'returned home and abode in peace,'—the usual laconic dismissal of a jester who has done jesting.

Markolf  
and Aesop.

The Markolf thus vividly drawn was certainly indebted for certain hints to another legendary figure who has been in recent times more than once associated with him, the astute slave of the Greek philosopher Xanthus. But I do not think these hints have amounted to much; the imitation is in any case thoroughly independent and original. Markolf is throughout the German boor and is in no way assimilated to the Greek slave. The description of his person, though clearly influenced by that of Aesop, is still quite distinct. Both are ugly, but Aesop's ugliness is that of Thersites,—the 'pointed head,' the 'squint eye,' the actual deformity of shape';—while Markolf's is mainly borrowed from the mere grossness of brute life. Aesop is a distorted man, Markolf an intellectual beast. Aesop's jests again are as strictly those of his condition, as Markolf's are of his. They are the tricks of the household slave as he waits at table or goes to market, often merely perverse interpretations of orders, like those which Ulenspiegel inflicts upon his masters the shoemaker and the tailor, and oc-

<sup>1</sup> Cf. the *φοξός*, *φολκός*, *χωλός* of *Il. II.* 212 ff., with the *φοξός*, *βλαισός*, *κωφός* of the *Vita Aesopi*, which in fact adds explicitly: *τάχα καὶ τὸν ὀμηρικὸν Θερσίτην τῇ αἰσχρότητι τοῦ εἶδους ὑπερβαλόμενος*. Thersites indeed was only 'the ugliest man in the Greek camp'; this is improved upon in the case of Aesop, who *δυσειδέσ-  
τατα τῶν ἐπ' αὐτοῦ πάντων ἀνθρώπων εἶχε*.

casionally accompanied by a touch of mere brutality like his<sup>1</sup>. But this domestic, *kleinbürgerlich* trait is quite wanting in the humour of Markolf. It can hardly be doubted that the transformation thus effected was, if not in origin, yet in all its later and more vivacious stages, essentially the work of German, and probably of Low German, humour. In France the narrative framework remained unknown until the presses of Köln and the Netherlands began to circulate the famous *Collationes* through the length of Europe<sup>2</sup>; and the whole Markolf literature that grew up before that date out of Germany was founded upon the Proverb-contest alone. In Germany, on the other hand, the entire story appears to have been familiar almost as soon as it was composed. The vernacular literature borrowed freely from it; the minstrels turned it into romance, not disdaining even its grosser incidents<sup>3</sup>, some of which themselves betray the influence of the native German art of the wandering minstrels<sup>4</sup>. The whole was very early translated into German<sup>5</sup>, and again in the fifteenth century, as the *Frag und Antwort Salomonis und Marcolphi*.

<sup>1</sup> Ulenspiegel's flaying of the dog may be paralleled by Æsop's amputation of the pig's foot to make up the 'four pig's feet' which Xanthus had ordered, Xanthus himself having privately abstracted one from the dish with a view to obtaining a handle against his slave.

<sup>2</sup> They appeared in Italian as early as 1502 (at Venice), and became the source of the Italian Markolf, Bertoldo.

<sup>3</sup> The adventure with Markolf in the oven occurs in the *Salman und Morolt*.

<sup>4</sup> Cf. Schaumberg, p. 7, who finds traces of minstrel influence in the typical numbers of the scene in which Markolf rouses the women of Jerusalem: 'septem maritos,' 'septem uxores,' 'septem milia mulierum.'

<sup>5</sup> The existing Latin *Collationes* do not however perfectly represent the source of the older translations, so far as regards the proverbs, which only to a small extent coincide.

*Markolf  
in France.*

Wholly different was the literary fortune of Markolf in France. The narrative, as I have said, remained unknown there; neither its grossness nor its humour at all coloured the French tradition. The dialogue however contained a sufficient measure of both, and it was moreover so rich in dramatic suggestion, the contrast of the two minds and characters was shown from so many points of view, that a fine literary taste might be expected to develop the subject rather by singling out particular aspects of it, than by mere accumulations, clumsily pieced together, as had been the case in Germany. This was what actually happened in France. The dialogue form remains to the end, with no attempt to complete or continue it. But Markolf, the hero, has become a fraction of his former self; he speaks in one key, his ideas and illustrations all belong to one category, he is rather a personification than a person. In the two poems in question, however, the key, the category, are at least widely different. To the Count of Bretagne<sup>1</sup> Markolf is simply the ingenious *vilain*, Solomon simply the representative of *noblesse*. The king praises valour, courtesy, generosity, compassion; the boor retorts by urging the pain of wounds, the dull stress of labour, the bitterness of poverty<sup>2</sup>. It is obvious however that the contrast of

<sup>1</sup> *Proverbes de Marcoul et de Salemon*.—‘Ci commence de M. et de S. que li queus de Bretagne fist’—reprinted by Crapelet: *Proverbes et Dictons populaires*, Paris, 1831. Cf. Kemble, u. s. p. 73, and Schaumberg, p. 31.

<sup>2</sup>

Seur tote l'autre hennor.  
est proesce la flor,  
ce dit Salemons;  
Ge n'aim pas la valour  
dont l'en muert à doulor  
Marcoul li respont.

noble and peasant by no means coincided over its whole range with that from which it started; the type of French chivalry in the thirteenth century was by no means altogether in harmony with the wisdom of the Jewish king. And as the poem proceeds we find the wisdom of 'honour' and 'valour'—fair modern equivalents for Solomon's 'virtue' and 'courage'—alloyed with the lower wisdom of social refinement and personal ease, the wisdom that eschews early rising and unpleasant noises. Solomon in fact, the idealist of the old dialogue, approximates to the sheer egoism which is the standing quality of Markolf; he is the refined, as the Markolf of the Latin dialogue is the gross, egoist. And even this point of difference almost vanishes, for it is precisely the absence of grossness which distinguishes the opponent of the French Solomon from the older Markolf. The original antagonism of the two, accordingly, perceptibly dwindles; until Markolf's replies cease to be retorts or parodies at all, and become simply comments, or supplements,—which carry on Salemon's thought in a new, but not necessarily lower, region, or clinch his phrases with a proverb. 'I love not poor pasture, nor toil beyond measure,' quoth Solomon; 'snow in summer is against nature' quoth Markolf<sup>1</sup>.

<sup>1</sup> P. 195, stanza 1. Cf. ib. 2, 3.

Ge n'aim soulaz d'enfant  
ne doner à truant,  
ce dit Salemons;  
ne ge feme plorant,  
ne de félon le chant,  
Marcol li respont.

Ge n'aim cri de mastin  
ne lever trop matin,  
ce dit Salemons;

The author of the second poem<sup>1</sup>, on the contrary, has dwelt exclusively on Markolf the *railer at women*. The whole is merely an expansion of his abuse of the two *meretrices* of Solomon's judgement<sup>2</sup>.

*Traces of  
Markolf in  
England.*

Ten Brink has more than once dwelt upon the strange failure of many literary growths which flourished luxuriantly on the continent to take root in England; and no illustration can be more apt than that of Markolf. One of the most vivid creations of the middle ages, with a permanent freshness of literary motive which forced it into celebrity at the very height of the Renaissance, it has left in England no palpable trace beyond a few allusions, a score of translated verses, a string of proverbs, and one or two characteristic jests. Scanty as

ne ge mauvais cousin,  
ne ève qui tolt vin,  
Marcol li respont.

Cp. pp. 194, stanzas 2, 5; 199, stanzas 2—4.

<sup>1</sup> *‘Veez cy une desputacoun entre Salamon ly saage, et Marcoulf le foole.’* MS. Trin. Coll., Camb., printed by Kemble, p. 77 ff. I quote the first stanza:—

Salamon dit.  
Mortalité et guerre  
Sonnt exil de terre,  
Et destruizement.  
Marcoulf responnt.  
De putayne sonnd maux  
Et guerres mortaulx,  
Et perils des gens.

The British Museum *Dictz de Salomon avecques les responcez de Marcou fort joyeuses* is obviously a version of the same, but with great variations.

<sup>2</sup> *‘Ubi sunt aures, ibi sunt cause. ubi mulieres ibi parabole.’* Some of the old prints read *auce* (e.g. that of Landeshut, 1574), which is plausible, as in the German version this saying is followed by another about geese.

these are, however, their points of contact with the Markolf legend cover almost the whole field of its ramifications.

From the thirteenth to the sixteenth century, three conceptions of Markolf appear to have succeeded one another; and they are at once referable to the influence of the only three versions of the legend which had any chance of vogue in England. In the first phase he is the cunning proverb-maker, a type, rather than a champion, of popular wisdom. It is as such that he appears as the father of *Hendyng*, the impersonation of the mixed wit and shrewdness which produces proverbs<sup>1</sup>. But Hendyng's collection was evidently, as Ten Brink says<sup>2</sup>, formed under French influence, and bears the closest resemblance in form to that called *Les proverbes au comte de Bretagne*, where each strophe is in the same way clinched by a proverb, with the running burden, *ce dit li vilains*, which the 'quoth Hendyng' of the English proverbs is obviously meant to represent<sup>3</sup>. Neither Hendyng nor the *vilain* however at all represent,

<sup>1</sup>.  
Markolf as  
Proverb-  
maker.  
Hendyng.

- <sup>1</sup> Mon þat wol of wysdom heren  
At wyse Hendyng he may lernen,  
þat wes Marcolues sone.

The opening stanza, in which these words occur, is only found in one MS. (Ten Brink, u. s.); they are probably therefore not those of the author, but they are evidently contemporary.

<sup>2</sup> *Gesch. d. engl. Litt.*, p. 392. Kemble, who as he himself admits in a subsequent note, unaccountably omitted the allusion in Hendyng when discussing the traces of the story in England, did not I think see, what I hope will immediately appear, that it points to the Bretagne Marcoul.

<sup>3</sup> To show the similarity of form I quote a stanza from each:

Jà por estre cortois  
plus grevez nesserois  
que por estre vilains;  
les tesches sont à choïs

like Markolf, the *vilain's* characteristic point of view; the precepts which Hendyng is made to sum up in his epigrams is rather clerical in tone; with its zeal for knowledge (2—5), charity (12), and temperance (36). Nor is the *vilain* of the proverbs a typical man of his class. At the very outset he is found regretting the decay of the chivalrous virtue of honour, and applauding the 'valour' that leads men to bear pain, the 'prowess' that is the enemy of sluggishness<sup>1</sup>. And throughout, his maxims, like Hendyng's, seem rather to give the sanction of popular wisdom to universal morality than, like Markolf's, to combat and trench upon it. Why then is Hendyng called Markolf's son? From what I have already said of the first French poem of Marcol or Markolf, it will be plain that the transition from this provided exactly the middle stage which we require from the Markolf of the Latin dialogue, the foul-mouthed,

mais qui prent du sordoï  
 bien doit avoir du mains;  
 qui d'onneur n'a cure,  
 honte est sa droiture,  
 ce dit li vilains.

Crapelet, p. 170.

3ef þou havest bred ant ale  
 ne put þou nout al in þy male,  
 þou del hit sum aboute;  
 be þou fre of þy meeles,  
 wher so me eny mete deles  
 gest þou nout wipoute.  
 Betere is appel y3eve þen y-ete,  
 quop Hendyng.

Kemble, p. 273.

<sup>1</sup> Crapelet, p. 169, st. 2; this is the exact antithesis of Marcoul's:

Ge n'aim pas la valour  
 dont l'en muert à doulour.

gross-minded parodist, to the excellent and honourable 'vilain' and his English brother Hendyng<sup>1</sup>. The Markolf of the Count of Bretagne begins as an antagonist, but his later utterances are often indistinguishable in tendency from the king's, instead of parodying Solomon's sayings he *caps* them; and from the cap which completes the step is small to the proverb which clinches. With the disappearance of the antagonism, moreover, the dialogue form at once became superfluous, and, when the *vilain* replaced Markolf, was naturally dropped, or lingered only in suggestion conveyed by the 'ce dit' and the 'quoth,' that the *vilain* or Hendyng spoke only the final phrase.

Within 150 years from the Proverbs of Hendyng, a totally different conception of Markolf had gained <sup>2.</sup> *Markolf as the Fool.* ground. The kind of supremacy which he had won in Lydgate. proverb literature, is exchanged for a similar supremacy in the equally vast literature, to which I shall return in the next chapter, of Fools. To Lydgate, whose somewhat gloomy morality and entire want of humour made him a natural enemy of the whole tribe of Markolf's, the 'father' of the proverb-maker Hendyng becomes the 'founder, patron and president of the order of fools<sup>2</sup>.' The antagonist of Solomon becomes, what he had never yet been, his direct moral antithesis; the rivalry, which in the Bretagne dialogue was all but dissolved in good fellowship, is now sharpened into diametric opposition; the 'satiric bias, the class feeling, the humour, which had made the rough peasant appear rather more than the equal of the divinely endowed king, are all

<sup>1</sup> This is of course not meant to imply that the figure Hendyng was new, or a copy of the *vilain*; but only that it was through the *vilain* that he came to be connected with Markolf.

<sup>2</sup> Lydgate: *The Order of Fools*, v. 5.

stripped away, and the supreme representative of wisdom is confronted—what could be more simple and natural?—by the chief of ‘fools’<sup>1</sup>.

It can hardly be doubted that this strong antipathy to Markolf was due, as Kemble has pointed out, to the second of the two French versions of the story; in which, as I have already said, the degradation of the German Markolf is carried still further than his refinement had been in the former. For Lydgate’s ‘fools,’ like Brandt’s, include not merely simpletons but actual wrongdoers of every kind; the ‘order of fools’ is a representative gathering of all the various forms of sin,—exactly sixty-three in number in Lydgate’s view. The patronage and presidency of such a body could hardly be credited to a man who had not a well-assured reputation for positive wickedness. The pranks of the German Markolf could not possibly entitle him to that position; even his grossness is at the worst disgusting, not licentious; he hardly breaks the commandments and commits no deadly sin. Only the truly loathsome *Marcolf* of the French *dictz*

<sup>1</sup> Lydgate’s moral contempt for Markolf is still better seen in his other allusion, in the *Moral of the Fable of the horse, the goose and the sheep*:—*Lydgate’s Minor Poems*, p. 120 (Percy Soc.).

A cherol of birthe hatithe gentil bloode;  
It were...A perilous clymyng whan beggers up arise  
To hye estate...Clymyng of foolis  
Unto chayers of worldly dignité,  
Looke of discrecioune sette jobbardis upon stoolis,  
Marchol to sitte in Salamons see,  
What follwithe after no reason no justice.

On the other hand, the allusions of Lydgate’s contemporary, Audelay, to ‘Marcol’ (ed. Halliwell, Percy Soc. pp. 31, 50), show that, though called ‘the more fole,’ he could still be associated with homely popular wisdom; for he is made to ‘warn’ Solomon ‘hou homle hosbondmen’ are indignant at the sins of their rulers.

whose talk reeks in every line of the *lupanar*, can have been in Lydgate's mind when he made Markolf the 'founder of the order of fools.' The poem itself indeed directly gave the suggestion; for in at least one MS. it is entitled *Disputation de Salomon le saage et Marcolfe le foole*<sup>1</sup>.

The moral poet of the dullest age of English literature was not however to pronounce the last word upon Markolf. The French version of the dialogue to which he owed his ill reputation, was still popular at the outset of the sixteenth century<sup>2</sup>; but it was now met by the formidable rivalry of a Latin dialogue, substantially equivalent to that on which both the old French poems had been founded, and enriched with the still more telling humour of the narrative which had gradually grown up about it in Germany. The *Collationes* are henceforth the standard edition of the Markolf story<sup>3</sup>; the humour which had vanished in serious morality on the one side, and in mere foulness on the other, reappears; the proverb-maker and the intimate of *putains* are equally replaced by the ingenious if gross jester of Solomon's court who, like Hans Pfriem, can neither be banished nor put to death.

<sup>1</sup> Kemble, u. s. p. 77 ff. Lydgate's use of this poem is, perhaps, not the earliest trace of it in England. It was in any case in existence at least two centuries before him. But the *Certamen Salomonis et Marculphi*, attributed with little reason to Walter Map, and included by Kemble among the English traces of the story, cannot be claimed with any certainty as English, and I therefore make no further allusion to it.

<sup>2</sup> The French *Dictz* was translated into English early in the century, and twice printed, by Pynson in London and Leu in Antwerp. Both original and translation are reprinted in Kemble.

<sup>3</sup> The *Dictz de Salemon et Marcoul* (=the second French version) were printed only twice, about 1500; the *Collationes*, under various titles, went through at least a dozen editions.

The slight traces which remain of this third Markolf are in fact concentrated about these two incidents, his futile banishment and death-sentence. Transferred to the English jester Scogin,—whose history is an agglomeration of German and French, about a nucleus of native, facetiae,—the story of Markolf's dismissal after the cat and mouse trick, under a threat of loosing the dogs at him should he return, and the device of the hare by which he defies the dogs, became familiar English jests<sup>1</sup>. The still more celebrated story of his second banishment, the oven-trick by which he evades or revenges it, and the final piece of humour which saves him from hanging, are also borrowed by the compiler of Scogin<sup>2</sup>, with some very unskilful attempts at improvement<sup>3</sup>. Both tricks became part of the standing stock of court-jester legends. Not only James I's fool, Archie Douglas, but his tutor Buchanan, was credited with the oven-jest<sup>4</sup>. In addition to the instances quoted by Kemble, a trace of it occurs also in one of the most

<sup>1</sup> *Scoggin's Fests*, ed. Hazlitt (O. Eng. Jest Books), p. 124 f. Cf. Kemble, u. s. p. 94. It must be observed that as the first extant edition of Scogin is only of 1626, it cannot be certainly assumed that this and the following story were originally contained in it.

<sup>2</sup> *Scoggin's Fests*, u. s. p. 152. This is quoted in full by Kemble, p. 94.

<sup>3</sup> The servants commissioned to hang him are reduced to give up their task from the irrelevant and absurdly invented circumstance of having brought no food with them, while Markolf is abundantly supplied with 'sucket' and 'marmalade.' At nightfall they leave him, Markolf bidding them report to the king that he *would* not choose a tree. This is obviously weak, for in declining to choose he goes beyond his privilege, and the king might fairly have ordered his execution *sine conditione*; whereas Markolf's position is unassailable: he is perfectly ready to choose, as soon as a tree 'on which he would desire to be hanged' is found.

<sup>4</sup> Kemble, p. 96.

popular jest-books of the century, the *Merry Tales and Quick Answers* (No. 84), where 'a mery felowe in high Almayn,' who has displeased the great lord of the country by his scoffing, is taken by the earl's servants and condemned to be hanged. When at the scaffold he begs to be allowed one favour, which the earl agrees on condition that it does not concern his life. He specifies a certain degrading kind of homage to be paid him by the earl for three mornings after his death. The earl demurs, and lets him go. This story appears to be a confused recollection of Markolf and Ulenspiegel. The circumstances somewhat resemble those of Markolf's proposed hanging, but the 'condition' is eminently characteristic of Ulenspiegel, and is actually used by him in the 30th story of Copland's version<sup>1</sup>. There is here no 'lord' in question, but the town-council of Lübeck, and his fault is not 'scoffing,' like Markolf's, but cheating a wine-tapster, the degrading service being demanded of the tapster<sup>2</sup>.

Such is, I believe, a complete account of the history of Markolf in England up to the end of the sixteenth century. If his name remained familiar in Germany, where Nigrinus (1571) and Bruno Seidelius (1589) could still mention the German *Collationes* among the most current of popular story-books<sup>3</sup>, it was elsewhere remem-

<sup>1</sup> Lappenberg refers apropos of the Ulenspiegel story to that of Markolf, but not to this mixed version in the *Merry Tales*.

<sup>2</sup> For another allusion to the 'tree-choosing trick,' not quoted by Kemble, cf. Rabelais's Prologue to the posthumous fifth book of the *Gargantua*: 'Allez vous pendre,' he calls out to the *Zoïles emulateurs et envieux*,—'allez vous pendre, et vous mêmes choisissez arbre pour pendage; la hart ne vous fauldra mie.'

<sup>3</sup> Cf. quotations in Goedeke, p. 117. A Fastnachtspiel *Marcolfus* was performed at Lucern in 1546, ib. p. 303.

bered only by curious scholars, like Burton, who uses the old contrast of the wise king and the gross boor to point a striking passage of the *Anatomy*<sup>1</sup>. Even in France, where *calembour* and *espiègle* still attest the celebrity of Markolf's brother jesters, pure Teutons though they were, no permanent trace has remained of Markolf himself, whose history owed to French pens so much of its early diffusion and of its early form. To these his more fortunate rivals I now turn.

## II.

DER  
PFARRER  
VON KA-  
LENBERG.

No such venerable pedigree as that of Markolf belongs to the Pfarrer von Kalenberg. Whatever amount of legend may have gathered about him, the famous parson is a historical figure, whom a credible tradition localises as Weigand von Theben, at the court of Otto, Duke of Austria<sup>2</sup>, in the early half of the fourteenth century. Kalenbergersdorf is still a village on the Danube, below the wooded hill of the same name, well known to Vienna excursionists. The historical Kalenberger is however hopelessly involved in the legendary reputation which he in part inherited, and also in some degree bequeathed. A full century earlier we meet with a similar though still more shadowy figure, Pfaff Amîs; and at about the same interval after the traditional date of his death, a continuation of his feats is ascribed to an adventurer who assumed the cassock after a wild career in the field, Peter Leu, 'der ander Kalenberger.' All of

<sup>1</sup> Kemble, p. 93, points out this passage.

<sup>2</sup> The earliest authority for this appears to be Aventine (quoted by Koch, *Compendium d. deutschen Lit.* 2, 354), who probably however took the statement from the book itself.

these have certain traits in common; and the most favourite jest was the least monopolised. The world-old topic of riddles, for instance, though steadily tending to give way before the more robust humour of the *Schwänke*, holds its ground in a few chosen forms inexhaustibly. Markolf, though overlaid with a later disguise of buffoonery, is still essentially a solver of riddles; Amis's most striking feat is that of the *soi-disant* Abbot in Bürger's ballad<sup>1</sup>; the Kalenberger not only solves the questions of his brother priest, but baffles him with others of his own. Even Ulenspiegel is, grotesquely enough, introduced (by an interpolator) into the university *aula* of Prague, and made to solve the still essentially similar problems of the doctors.

A hitherto unexplained tradition made Amis an Englishman<sup>2</sup>; the Kalenberger however, like Leu, is an

<sup>1</sup> This is one of the many points at which the medieval Rogue shews traces of a descent from, or a connexion with, Wuotan. Markolf is plausibly connected with Mercurius, his Roman equivalent; and the Abbot incident is paralled by Wuotan's personation of blind Gest and *asking* riddles of king Heidreck, a pardon to reward the production of any which he fails to solve. Cf. our Robin Hood, and the horse adventures of Friar Rush. Simrock, *D. Myth.*, § 127.

<sup>2</sup> According to the Strichaêre, at the beginning of his *Amis*, (written between 1200 and 1250).

Er het hûs in Engellant

In einer stat ze Trânîs [Lappenberg conj. *Tâmîs*.]

Und hiez der pfaffe Amîs.

quoted Goed., § 43.

The mystical character of the land beyond the North Sea for the dwellers on the continent included at least two traits: it was an abode (1) of the *dead* (Simrock, *D. Myth.* p. 437), (2) of *elves* and *nightmares*. The relation between *elves* and the class of vagabond jesters like Amis is so intimate that the former association would be a sufficient mythologic ground for Amis' connexion with England. Cf. esp.

undoubted German, and a South German. Something of the geniality of the South German temperament belongs to his jests, and the appreciable interval in other respects which separates him from the Saxon Ulenspiegel is not without a hint of the relative refinement of manners on the Danube and on the Elbe.

The future *Pfarrer* is described as coming up, a poor student, to the court of duke Otto. His very first feat is one familiar in legend. He arrives with an enormous fish for the duke; the porter stipulates for 'half the reward,' and the Kalenberger thereupon begs that this may consist in a sound flogging<sup>1</sup>. Less equivocal gifts follow, and, the cure of Kalenberg falling vacant, the needy student is enstalled. He soon becomes notorious with bishop, parishioners and duke. In his dealings with the last he is hardly distinguishable from the pure court-jester. The duke, for instance, has promised that 'nothing put upon his plate shall be taken from him,'—whereupon he procures a larger wooden trencher, several feet across, and leads the duke's horse upon it. With the peasants, he is naturally still less scrupulous. Encountering a party of them, for instance, who desire an interview with the duke, he persuades them that the duke is bathing and can give

Robin Goodfellow, and Friar Rush, the most mythic part of whose history occurs in England. (O. Schade in the Weimar *Jahrbuch*, v. 382).—I am not aware whether another singular trait which possibly contains a mythic element, has ever been explained; the association of England with *madness*. Cf. the Gravedigger's allusion in *Hamlet*— '[His going mad] will be no matter there, for there the men are as mad as he,' [with Marston's *Malcontent* III. 1 cit. ad loc. in Clar. Press Ed.—AWW.] and perhaps the following: 'Another did but peep into England, and it cost him more in good morrows blown up to him under his window by drums and trumpets, than his whole voyage: *besides, he ran mad upon't.*' Ford, *The Sun's Darling*, II. 1.

<sup>1</sup> This is told of the Kalenberger in Bebel, *Facet.* II. 54.

them audience only in the bath ; they accordingly strip, and are conducted, not to the bath but to the banquet-chamber, where the duke is feasting with all his court. The bishop too plays a somewhat ignominious part, too gross to be dwelt upon; and his moral censorship of the loose-living parson, has no other result than that the latter, being required to replace his youthful housekeeper with 'a woman of forty,' chooses, as her equivalent, *two of twenty*. The parson is finally transferred to another cure in Steiermark ; and with the title of Kalenberger he seems to have put off the jester also, for we hear nothing more of him but his peaceful death.

The German book of the *Pfaff's* exploits is said to have been compiled early in the fifteenth century by one Philip Frankfurter, at Vienna ; but the first distinct evidence of it occurs in the earlier years of the sixteenth<sup>1</sup>. It continued highly popular throughout the century, and till the beginning of the great war<sup>2</sup>. Probably about the end of Henry VIII.'s reign appeared an English version of it, under the title of '*The Parson of Kalenborow.*' It is now known in only a single, and that a slightly mutilated copy<sup>3</sup>. The first sheet has disappeared, and with it the whole of the introductory chapter (the adventure with the porter) and a few sentences of the next ; the last leaf seems to be also wanting, and perhaps contained the conclusion, which at present appears abrupt ; but in

*The English 'Parson of Kalenborow.'*

<sup>1</sup> Bebel, *Facet.* II. 54: 'Sacerdos caeci montis de cujus facete urbaneque dictis integri libelli perscripti sunt.' The earlier mention by Brandt (*N. Sch.* LXXII. 24: Wer yetz kan tryben sollich werck Als treib der pfaff von Kalenbergk) does not imply, as Goedeke says (p. 117), that the book of his exploits already existed.

<sup>2</sup> It went through not less than four editions in the seventeenth century, the last in 1620. Goedeke, p. 117.

<sup>3</sup> In the Douce collection of the Bodleian.

any case not more than a few lines. The substance of the history is therefore unimpaired. But, on the other hand, the English version is by no means a mere translation; but a free and independent handling of the story. Many incidents take a different complexion; obscure hints are worked out, new motives supplied, entire narratives inserted, and that with a skill which gives them the air of being rather portions of a fuller original restored<sup>1</sup>.

*Variations  
in treat-  
ment.*

As a fair specimen of the handling in the two versions I subjoin an extract from one of the earliest adventures of the newly appointed Pfarrer with his parishioners. Priest and people have been annoyed by the fall of rain through the defective roof of the church, which the community is too poor to repair. The former comes to their relief by undertaking the repair of the nave if they will repair the choir. They eagerly close with the bargain:—

Without avysement takinge as gredy people [they] answered their parson thus, saying Mr parson we thanke you of your gode profer, yf ye be so content we wyll cover the quere because we be nat able to cover the body of our churche, the parson hering this was right glad and said he was content. Than the paysans began the quere and ended it with all their diligence thinkynge that the parson sholde cover the rest, and when they had done and that theyr quere was covred they asked of their parson whan he wolde cover the remenant, and he answered and said my frendes yf ye have covred the quere ye have done that ye ought to do, therefore be content for I am well content, I se wel that I shall stande drye, and out of the rayne to do Goddes service, and the best counsell that I can geve you is that ye cover up the reme-

<sup>1</sup> Douce's pencil-notes in the Bodleian copy show that he speculated freely about its origin, but it does not appear that he ever saw the German *Volksbuch*, nor has any one else, so far as I know, compared them in detail. As the unique copy of the English version is still difficult of access, I need hardly apologise for devoting some space to the matter here.

nant, and than ye shall stande drye also. The paysans hering this were mervelously angry and curssed the preste, and began to crye out upon hym the one with a mischefe the other with a vengeauns, the third bid the deveyll bere hym away. Thus they were all abashed of their parsons subtyll wyles and yet they were fayn to cover their churche themselfe for any cost that the preste wolde do thereto or cause to be done, for he stode dry ynough to do goddes service, and thus he cared nat for them for they cared before as lytell for hym.

The corresponding passage of the original runs thus :—

Es will doch recht sein, sie da sprachen,  
 Und huben alle an zu lachen,  
 Sandten des Richters Eidam ihm zu,  
 Dass er den Pfarrherr bescheiden thu',  
 Wie sie den Chor, nach seiner Wahl,  
 Wollten schön decken überall  
 Der Pfarrer sprach: Es gefällt mir woll;  
 Darnach ich mich auch richten soll,  
 Dass Gottes Haus werde geziert,  
 Und das lang Haus gedecket wird.  
 Die Bauern eilten mit dem Chor,  
 Dass sie dem Pfarrherr kämen vor,  
 Sie eilten mit dem neuen Dach  
 Der Pfarrer verzog da sein Sach  
 Wol mit dem Decken manche Wochen.  
 'Herr ihr habt nicht also gesprochen,'  
 Dess sollet ihr euch immer schamen.  
 So scharf sie da in ihn kamen  
 Dass ihn da ganz erzürnt sein Muth,  
 Er sprach: 'Es dünket Euch nicht gut  
 Und dass ich hie im Chor steh' trucken,  
 So deckt nun selber zu die Lucken,  
 Dess ihr an mich da begehret.'  
 Ein jeder sich da gesegnet'  
 Und sprach zu derselbigen Frist:  
 Ein seltsam Mann der Pfarrherr ist.  
 Er sprach: Gesegnet ihr euch davor  
 Ich steh' wohl sicher in dem Chor

Vor Regen und dazu vor Wind:  
Versorgt euern Ort, ihr lieben Kind,  
Wollt ihr nicht in dem Wetter stahn:  
Nicht besser ich euch rathen kann.<sup>1</sup>  
Er liesz sich die Bauern nicht erschrecken:  
Die Kirche mussten sie wol decken,  
Wollten sie da nicht werden nass  
Wie unnütz mancher Bauer wass<sup>1</sup>.

The divergence of these two narratives is evidently not merely of the kind which results from the conversion of verse into prose. The English writer has told the story quite in his own way, adding and omitting, softening and heightening, and perceptibly modifying the play of character. His conception of the relation of priest and people betrays the age of the Protestant Revolution. The German villagers are still the abject inferiors of their priest, and even at the moment of discovering his gross treachery, go no further than to cross themselves with a half awe-struck ejaculation: 'Our parson is a strange man.' The Englishman clearly felt this mildness intolerable, and his peasants are accordingly made to be 'marvelously angry,' to 'curse the priest,' and 'cry out upon him'—'with a mischief,' and 'a vengeance,'—'and the third bade the devil bear him away.' A similar touch serves to adapt the parson to his new circumstances. Towards the more childlike peasants of the German tale he is blunt and overbearing; he meets their remonstrances with open anger (*ganz erzürnt*): 'if they don't like him to stand dry while they are wet, they can help themselves.' But to his less ceremonious English parishioners he shews from the first an ironical respect, culminating in the bland sarcasm, of which there is no hint in the *Volksbuch*: 'My friends, if ye have covered the quire ye have

<sup>1</sup> From the reprint in Hagen: *Narrenbuch*, p. 526 ff.

done that ye ought to do, therefore be content, for I am well content.'

In other company it is the parson who is made to display the vigour of abuse which the translator evidently missed at certain points of his original. The neighbouring priest 'der auch gar weise wass, und dauchte sich auch also spitzig,' comes to test the Kalenberger with hard riddles. Foiled at every point he puts a good face upon his defeat. 'Well, well,' he cries, 'I am beaten;' but you must make amends for the injury by giving me your lasting friendship,—and some of your best wine! And the Kalenberger vows he shall have it. This genial trait, together with, still more strangely, all the detail of the wit-combat which it closes, wholly disappears from the English version:—'In short conclusion, they argued sore, but the parson held the overhand, whereof he had grete honour. Then said he to the old priest: Thou gray-heded fole, thou hadest better not to have argued,' &c. 'Now no more of this, said the parson,' and then the Kalenberger consents as before, to make merry over their good cheer.

But more substantial variations remain. In the fifth story of the *Volksbuch*, for instance, a repulsive trick is told of the parson, which, as it stands, is a mere unprovoked piece of buffoonery. In the English version, however, this tale is provided with a long *Vorgeschichte*, the effect of which is to make the trick an act of vengeance upon his clerk<sup>1</sup>. A more striking case occurs on the parson's summons to his bishop. The *Volksbuch* says simply:

Er war gehorsam dem Bischop  
Er kam geritten und gegangen,

*Additional  
stories.*

<sup>1</sup> The clerk has given him a quack prescription. I cannot trace any original for this story.

but in no way indicates the solution to the riddling brevity of the second line. In the English version, however, the whole story is given at length. The parson

sadeled a lowe lytell mare somewhat hyer than three horse loves, and so lept he into the sadell and set him on his journey with his one fote hanginge on the grounde and the other as yf it had been cast over the sadell, and so come to the bishop Courte where as the bishop lend before the gate; and the bishope thus seyinge laughd hartely and asked of the parson how he came so rydinge; the parson answered and sayde, my lorde I ryde nat, the bishop asked him, how then, goest thou on fote? he sayde nay my Lorde, I come hangyng on my Mare unto your grace, the which shall advantage me but lytell. The bishop hearing this went away and thought he had ben folyisse.

The quibble in this story was no doubt a very familiar piece of *Volkswitz*; yet the English version has not the air of a deliberate interpolation; and would an interpolator in the middle of the sixteenth century have thought of the familiar description of the bishop 'leaning before the gate' of his Court?

A third story, fragmentary in the current versions of the *Volksbuch*, but completed in the English version is that which narrates how the 'witziger und spitziger Pfaff' of the riddle-contest is induced by his former opponent to exchange his own more desirable benefice for that of Kalenberg. The Kalenberger privately distributes *groschen* among the peasantry, with directions to bring them as an offering to mass, and the strange priest makes no difficulty in consenting to become the permanent recipient of so much generosity. On discovering the trick he gladly purchases the right to resume his own benefice. In all but a single known version there is here an obvious lacuna, the parson's arrangement with his peasants being abruptly cut short at the opening line: *Wist ir nit was im breu ist?* Hagen, in reprinting the

*Pfarrer* for his *Narrenbuch*, perceived the lacuna, but unfortunately read this line, *Wiszt ihr was in dem heu ist?* and accordingly explains that the parson makes the peasants 'thrash hay, and bring the payment to mass'.<sup>1</sup> It is obvious that this, as well as being nugatory, spoils the jest by making the peasants *earn* their contributions. The completion of the lacuna, with the true reading, was first given by Lappenberg from an old edition which he places about 1500<sup>2</sup>. But the English version had long before this discovery satisfactorily supplied the gap, in the chapter sufficiently described by its heading: 'Howe the parson gave shillynges to every one in hys parryshe to the entent that they should offer it the next daye at the olde prestis masse for to begyle hym to cause him chaunge benefices'.<sup>3</sup> This is described in some detail, and the delusion of the 'old priest' follows as before.

With the single, fragmentary old print which I have described, at I fear tedious length, the career of the Kalenberger in England opens, and closes. His failure is the more remarkable, as it occurred at the very time when the current tales of two heroes of native jest who strongly recall him, were formed into a collection which kept their memory green for a century,—the scholarly Scogin and the merry vicar, Skelton. Several of his feats no doubt crept into English literature, but only through the accident of their having been borrowed to form a patch in the motley of the less worthy but far

*Other  
traces of the  
Kalen-  
berger in  
England.*

<sup>1</sup> *Narrenbuch*, *Pfarrer v. Kalenberg*, note.

<sup>2</sup> *Wiener Jahrbücher*, Bd. 40, Anz. p. 19. No hint is here given that this edition contains any of the other additions of the English Version.

<sup>3</sup> An unimportant trifle is that the amount for which the Kalenberger consents to resume his old benefice is forty instead of thirty pounds.

more famous figure to whom I shall immediately turn. The German compiler of *Ulenpiegel* enriched his hero with not less than five jests from Amis and two from the Kalenberger<sup>1</sup>, three of which were retained by the more meagrely clad English *Ulenpiegel*. Of the five stories from Amis—the mock painting, No. 27, the solution of the riddles proposed to him by the university of Prague, No. 28, the teaching of the ass to read, No. 29, (both ludicrously inappropriate to the character of the unlettered boor, about whom universities felt little curiosity), the cure of the patients in the Nürnberg hospital (by threatening to burn the last to leave it), No. 17, and the adventure as relic-monger, No. 31,—all but the third reappear in the English version, (as Nos. 19, 20, 13 and 21). Of the two taken from the Kalenberger, one reappears in the English *Ulenpiegel*: the offer to fly from a tower-top (No. 14, Copland No. 10); and from *Ulenpiegel* this scion of the Kalenberger returned once more to his own kin, for the story was embodied in the famous *Jests of Scogin*<sup>2</sup>.

<sup>1</sup> 'Mit zulegung etlicher fabuln des pfaff Amis und des pfaffen von dem Kalenberg.' *Ulenp. Vorrede* (ed. Lappenberg). Lappenberg, (ib. p. 354), gives the references to these. They are given, incompletely, by Kemble, *Sol. and Saturn*, p. 281.

<sup>2</sup> Hazlitt's edition (*Old English Jest-books*), p. 127. It is clear that the compiler of *Scogin* drew from *Ulenpiegel* and not from the *Parson of Kalenborow*. The promise to fly is in *Ulenpiegel* a whimsical buffoonery without motive or pretext: in the *Pfarrherr* it is a device to get rid of the parson's bad wine, which the thirsty spectators readily drink while they await his appearance. The story in *Scogin* shows no trace of this motive; and though its scene is transferred to France, and its effect heightened by the introduction of a Frenchman who, piqued by *Scogin*'s failure, actually *does* fly, in other respects it closely resembles *Ulenpiegel*.—It must be added that as the first extant edition of *Scogin* is of 1626, it cannot be assumed that this story, any more than those borrowed from *Markolf*, belonged to the original collection.

## III.

What the Kalenberger is to Lower Austria, and Leu ULEN-  
 to Swabia, Ulenspiegel is to Saxony, Hanover and Bruns- SPIEGEL.  
 wick. Magdeburg is the centre of his *terrain*, and thence  
 northwards to Luneburg and Rostock, westwards to Hil-  
 desheim and Hanover, southwards to Erfurt, he is every-  
 where at home. He has been well described as a wily  
 peasant who inverts the usual relation of town and coun-  
 try by making victims of the citizens. He does not  
 practice exclusively upon townsmen; dukes, physicians,  
 priests and monks, are occasional though rarer victims;  
 but the chief sufferers are on the whole the typical men  
 of the burgher-class,—the tailor, the baker, the black-  
 smith, the shoemaker in their shops, the huckster in the  
 market-place, the *wirth* and *wirthin* in the tavern. He  
 takes service with a shoemaker, for instance, and obeys  
 his master's orders literally by cutting out his shoes very  
 large or very small (F. 27<sup>1</sup>); with a tailor, and being  
 required to make a 'wolf'—a current name for a kind  
 of peasant's cloak—cuts it to the shape of a wolf (F. 29).  
 He inveigles a priest into a virtual disclosure of what  
 had been told him in confession, and then extorts his  
 horse as the price of silence (F. 25). He cheats a farmer  
 of green cloth by laying a wager that it is blue, and  
 supporting his view by the aid of corrupted witnesses  
 (A. 68, F. 34<sup>2</sup>). At Magdeburg the flying adventure

<sup>1</sup> A=the number of the story in the Strassburg edition of 1519;  
 F=that in Copland's English version, containing about half the  
 tales.

<sup>2</sup> This is superficially like the Italian story in the *Merry Tales  
 and Quick Answers* (No. 58), 'Of the fole that thought himself  
 dead,'—where the 'fole' is successively met by a number of con-  
 federates who remark on his ill looks, until he is finally induced, on

already mentioned affords him a laugh at the whole town (A. 14, F. 10). Another well-known legend with many parallels tells of his mock alms to twelve blind men; each imagines the money to be in the keeping of the rest, and it is only at the close of a substantial feast in the nearest tavern that they discover the true nature of Ulenspiegel's δῶρον ἄδωρον (A. 71, F. 35)<sup>1</sup>. But his most numerous victims are the innkeepers. He presents one of his hostesses, at the close of dinner, with an account 'for the labour of eating it' (A. 33, F. 22), and punishes another for her rash declaration that 'penniless guests must pay with their coats,' by flaying her favourite dog and presenting her with the skin (A. 82, F. 37). Here, as often, Ulenspiegel's humour, such as it is, is lost in his brutality. In another of his tavern-tales, one of the best, it is over elaborate. Three guests who come in late one evening after a delay caused by wolves, are mercilessly scoffed at by their host for their timidity. Ulenspiegel thereupon goes out, kills a wolf, brings its body to the inn the same night, sets it up beside the fire, and then loudly calls for drink. The host on going into the *Stube* to fetch it, finds the wolf in possession of his hearth, and rushes out in abject terror, only to be met

their authority, to believe himself dead. A much closer parallel however is that of *Scogin's Jest*s, p. 56, where the trick is transferred from cloth to sheep. In the latter form the story is very old. It occurs in Bromyard and Pauli, and the former was the direct source of Scogin. 'I know not,' says Mr Hazlitt in his note, 'whether this story occurs before.' I cannot help remarking on the singular conception of editorship which allowed the editor of the Old English Jest-books to neglect so obvious a source as Bromyard.

<sup>1</sup> This story, like those of the priest's horse and the blue cloth, was turned into a *Fastnachtsspiel* by Hans Sachs. *Eulenspiegel mit den blinden* is reprinted in Goedeke and Tittmann's selection of his *Fastnachtsspiele*.

by the taunts of his despised guests of the evening before (A. 78, F. 36).

No copy has ever been found of the Low-Saxon original of *Ulenspiegel*, evident traces of which remain in the early High German versions. The first extant versions take us to Strassburg, where in 1515 the earliest known edition, and in 1519 that till recently regarded as such and attributed to Murner, were published<sup>1</sup>. From Strassburg it passed to Augsburg (ed. 1540) and Erfurt (ed. 1532—38) and northwards to Köln (Servais Kruffter's undated edition), thence to Antwerp (undated ed., 1520—30), and from Antwerp to Paris and London. The Antwerp edition,—a cento containing about one-half the stories of the original,—was the basis of the French version of 1532 and its successors<sup>2</sup>, and of the English version printed, probably between 1548 and 1560, by William Copland<sup>3</sup>. *History of the book*<sup>1</sup>.

It was therefore only a mutilated *Ulenspiegel* which Copland introduced to his countrymen. On the other hand his Dutch original contained one new story, not in the Strassburg versions, but occurring as an evident interpolation in the undated Köln edition of Kruffter<sup>4</sup>, that— *Copland's Howleglass*.

<sup>1</sup> For the bibliography I am dependent on Lappenberg (pp. 147 ff.), as corrected and supplemented by Scherer (*Quellen u. Forschungen* No. 21, pp. 27 ff. and 78 ff.),—the latter a most brilliant piece of scholarship. The Strassburg edition of 1515, in London, was unknown to Lappenberg. Scherer shows by a comparison of its readings with those of 1519, that the basis of both was still a High German edition. The original Low Saxon is thus separated from us by at least two removes.

<sup>2</sup> *Ulenspiegel...Nouvellement translate et corrige de Flamant en Francoys*. (Paris, 1532.)

<sup>3</sup> *Howleglass*. Here beginneth a merye Jest of a man called Howleglass, and of many marvelous thinges and jestes that he did in his lyffe &c.

<sup>4</sup> Scherer, u.s. p. 29. Lappenberg overlooked this.

perhaps taken ultimately from Markolf—of the young Ulenspiegel's answers to a question about the way, (Copland, No. 2)<sup>1</sup>; and Copland himself added a copy of verses, which deserve a moment's notice as the first indication of the impression made by Ulenspiegel upon an English mind. It is difficult to suppose that the particular English mind can have been that of the translator, for they stand in complete antithesis to the history which they close. Instead of adding another to Ulenspiegel's feats, they introduce him holding a solemn disputation,—in which for the first time in his life he is distinctly worsted. The undisguised fellow-feeling with which his pranks had been told, passes abruptly into stern reproof; the genial adventurer who compiled the History, and in whom it was at least plausible to suspect Thomas Murner, is suddenly replaced by a serious, staid, and probably Protestant, London citizen, who doubtless wrote with a purely moral aim, and a desire to put the antidote within easy reach of the poison. The verses form a separate chapter, No. 44, immediately preceding the final chapter which gives Ulenspiegel's death:— 'How Howleglass came to a scholar to make verses with hym to the use of reason' (No. 44). In seven-line stanzas, a form of literary art of which the boor of Kneitlingen is elsewhere quite innocent, he urges successively

<sup>1</sup> In the Dutch version headed: *Hoe Vlespieghel antwoorde eenen man die nae den wech vraghede*. Kemble, who notices the analogy to Markolf, adds, by way of explaining why this story does not occur in the High German: 'The German version knew well enough that these questions and answers belonged of right to another tale, and they are therefore not admitted into it' (p. 322). This reads oddly in the face of the compiler's own frank admission that he had added several stories from older books. These nice scruples have not counted for much in the history of Jest-books.

the irresistible might of Mars, Venus and Bacchus<sup>1</sup>, and the scholar answers his grave objections like a moral poet. This is the strain of the English Ulenspiegel:—

Venus a god of love most decorate,  
The flour of women and lady most pure,  
Lovers to concorde she doth aggregate,  
With parfyte love as marble to dure,  
The knotte of love she knittes on them sure,  
With friendly amite and never to discorde  
By dedes thought cogitation nor worde.

*Scholar.* Not to discorde? yet did I never see  
Know nor hear tell of lovers such twaine,  
But some fault ther was, learne this of me, &c.

But this rigorous view of Ulenspiegel gained little footing in England, or to put it more accurately, his name was never degraded as Markolf's had been, into a mere proverb for moral obliquity. In Scotland, singularly enough, the opposite was the case; the repulsive associations of the name appear to have there altogether extruded its humour; the word became a taunt if not an insult, and was introduced into the most acrid region of the polemical vocabulary. The very distortions it underwent show that it had become an everyday word in the lips of men for whom its original meaning was lost<sup>2</sup>.

*Howlglass  
in Scot-  
land.*

<sup>1</sup> So Lydgate, whose attitude towards Markolf is very similar, associates the 'order of fools' with the pagan gods:

Bachus and Juno hath set abroche the toun.

<sup>2</sup> Its regular Scottish form was *Holliglass*, cf. Jamieson's article, where the information about Ulenspiegel, even in the English version, is still, in the 1880 edition, drawn wholly from Steevens, Reid, and—Ménage! The instance which he gives from Spotiswood ('He called them *holliglasses*, cormoraunts, and men of no religion') and those in Sempill's Satirical ballad on Patrick Adamson, archbishop of St Andrews (cf. the *Sempill ballads*, Edinb. 1882)

*In Eng-  
land.*

In England, on the contrary, Ulenspiegel gravitated at once to the class of native jesters to whom he properly belonged. Under his English name he lost all foreign associations, and became an inseparable member of the brotherhood of Scogins and Skeltons, Robin Goodfells and Robin Hoods, from whom however he was always clearly distinguished by the enigmatic symbolism of the 'Owl on fist' and 'Glass at wrist' with which he was invariably represented. His History took its place with theirs in the library of Captain Cox; and, if a somewhat doubtful piece of evidence may be trusted, all three, with the new accession of Lazarillo de Tormes, were keenly relished by Edmund Spenser (which needs good evidence) and roundly abused by Gabriel Harvey (which is credible enough)<sup>1</sup>. It is therefore perfectly natural to find them, a generation later, associated on the stage, and Owlglass called in by Skelton, in his finest 'tinkling' verse, to play almost the only rôle still

both fall not before the last quarter of the century; Adamson was appointed to the see only in 1575, (Spotiswood, *s. anno*).

<sup>1</sup> Cf. Collier, *Bibliographical Catalogue*, s. v. Howlglass, where a MS. note in the Bodleian copy of the book is quoted, which Collier, judged to be in the handwriting of Harvey, and to allude to the poet. In any case it is a contemporary testimony, of some interest, assuming of course that it is genuine,—a proviso never quite superfluous where Collier is concerned.—'This Howleglasse, with Skoggin, Skelton and Lazarillo, given to me at London, of Mr Spensar, xx. Dec. 1578, on condition that I would bestowe the reading of them on or before the first of January immediately ensuing; otherwise to forfeit unto him my Lucian in fower volumes, whereupon I was the rather induced to trifle away so many howers as were idely overpassed in running thorough the foresaid foolish bookes; wherein me thought that not all fower together seemed comparable for false and crafty feates with Jon Miller, whose witty shiftes and practices are reported among Skelton's Tales.'

available in the mature Jacobean drama for a clown of his rough breed,—that of leader in the Bacchanalian fun of a Jonsonian Anti-masque. I give the often-quoted passage below<sup>1</sup>.

Even in the Anti-masque, however, Owlglass was necessarily like every one else, little more than a show-figure in a pageant; the wily peasant has no scope for his jests, and is introduced less in his capacity of jester than because his grotesque oddity of appearance contributed (like the monstrosities of a procession), to the picturesqueness of the general effect. With his usual minute care therefore, Jonson described every detail of the Owlglass he had in view,—the crooked, apish boy with fool's cap and feathers, glass and owl, astride on his father's ass and probably, like the original Ulen-spiegel, turning round to grimace at the groundlings<sup>2</sup>.

This introduction into the *Fortunate Isles* is no doubt Ulenspiegel's highest literary distinction. Once before, however, Jonson had made more than one casual dra-

<sup>1</sup> *The Masque of the Fortunate Isles*, 1626:

An Howleglass  
To come to pass  
On his father's ass;  
There never was  
By day nor night,  
A finer sight  
With feathers upright  
In his horned cap,  
And crooked shape,  
Much like an ape  
With owl on fist,  
And glass at his wrist.

<sup>2</sup> Thus the second story, which Jonson evidently had in view. On this ground I describe him as a boy, though I am not confident that Jonson meant this.

matic use of his name. When Sir Epicure Mammon, in the *Alchemist*, visits the laboratory where his base metal is being turned into gold, Subtle calls to his servant Face under the feigned name, 'Ulen Spiegel'; and to Mammon he continues to be 'Ulen' to the end<sup>1</sup>. Jonson was the most finished adept of all his contemporaries in the irony of dramatic nomenclature; and he has given no better proof of it than in making one of the most cautious and crafty charlatans in literature conceal his identity from his most credulous victim under the name of a world-famous rogue<sup>2</sup>.

*Stories borrowed from Ulen Spiegel.*

But the literary history of Ulen Spiegel does not end here. His general likeness to the family of English jesters made it inevitable that their histories should here and there be enriched from his; and on the other hand, he had points of divergence from them all sufficiently attractive to palpably warp, in at least one case, the English tradition. Like Markolf, he was laid under contribution by the wholly unscrupulous compiler of Scogin; for a feat indeed which his own compiler had drawn from the Kalenberger; and which was as much in place among the freaks of an Oxford scholar, as of a German priest. But there was a different class of Ulen Spiegel's jests, entirely his own, less easily assimilated to those of any English jester,—those of the mischievous apprentice, or servant. Skelton and Scogin are at bottom scholars,

<sup>1</sup> *The Alchemist* II. 1 etc.; *Poetaster* III. 1. These passages, like the last, have been referred to in almost all English accounts of Ulen Spiegel.

<sup>2</sup> A still more remarkable piece of irony, over which he had no control, has associated Jonson himself with Ulen Spiegel, whose upright burial (A. 95, F. 48) is probably at the root of the similar tradition once (if not still) current among the Westminster vergers, cf. *Quarterly Rev.*, No. 41, p. 108, and Lappenberg's note to the chapter in question.

with a strong dash of the court-fool; they cheat all classes from the king to the alewife; but they never take service. Nor, it need not be said, does Robin Hood. Robin Goodfellow is properly an elf, who rewards and torments men, but assumes no direct relation to them. Ulenspiegel, on the other hand, owes as much of his fame to his brief bondage with tailor and shoemaker, as to his roving adventures in taverns. And it was precisely the figure of Robin Goodfellow, uncertain and fluctuating in outline as it was, which took the impress of this new influence<sup>1</sup>. The early life of Robin (the first part of his 'Merry Pranks') is in great part modelled on Ulenspiegel; his mother's difficulties with him at six years old are those of Ulenspiegel's father<sup>2</sup>, and they are followed by the adventure as tailor's man,—closely modelled on the 48th tale of Ulenspiegel,—the humour of which is of a kind as familiar to Ulenspiegel as it is alien to Goodfellow—that of taking a man precisely at his word<sup>3</sup>. But the child Robin was not the father of the man, and the 'second part' introduces us to a wholly different being Robin Goodfellow the 'sprite,' who is distinguished from Ulenspiegel hardly more by his fairy privilege of transformation, than by his fundamental good-nature. 'He alwayes did helpe those that suffered wrong, and never would hurt any but those that did wrong to others<sup>4</sup>.' Ulenspiegel consistently follows the exactly opposite

<sup>1</sup> I follow here the suggestion of Lappenberg, u. s. p. 228.

<sup>2</sup> *Ulenspiegel*, chap. II.: whether put before or behind his father when he rides, the boy's behaviour is equally disreputable.

<sup>3</sup> The tailor in each case leaves his man with a hasty order: 'wirf die ermel an den rock,'—'Whip thou on the sleeves:' Ulenspiegel spends the night in throwing the sleeves at the coat, and Robin in lashing them to pieces. Cf. *Merry Pranks*, &c., ed. Collier, p. 8.

<sup>4</sup> *Merry Pranks*, u. s. p. 21.

principle, and the first Robin was only a second Ulenspiegel.

In the much more remarkable story which will be discussed in the next section, we shall see the motive of the 'malicious servant' carried out far more consistently<sup>1</sup>, and with supernatural associations wholly wanting to Ulenspiegel. And so far as Ulenspiegel's literary influence is at all traceable in after times, it would seem to have told in great part in the direction of this class of jest. The solitary later translation in English<sup>2</sup> (1709) may well have stimulated the chap-book biographers who had their seat in the purlieus of St Aldermary's. Several of their heroes show an unmistakable family likeness to Ulenspiegel. The scholarly or clerical jester of the sixteenth century is apparently extinct, and his place is taken by a bourgeois tribe of servants and tradesmen,—Tom Tram the apprentice, Tom Stitch the tailor, Tom Long the carrier, whose victims are for the most part their employers<sup>3</sup>. But they owe to Ulenspiegel at most a general hint; not one of their adventures, so far as my observation goes, is borrowed from, or modelled upon his; and though hardly at all superior in refinement or in point, they belong for the most part to a more civilised and artificial state of society. On the whole it must be

<sup>1</sup> Two stories of Ulenspiegel were, as we shall see, transferred to *Friar Rush*, those in which he appears in a parallel situation, as servant in a convent.

<sup>2</sup> *The German Rogue, or the Life and Merry Adventures...of Tiel Eulespiegel*...Made English from the high Dutch. London, 1709.—An article in the *Quarterly Review*, No. 41, p. 108 (1819), in a brief notice of Ulenspiegel, confounds this with Copland's. The notice abounds with other errors, not worth pointing out.

<sup>3</sup> Editions in the Brit. Museum. The *Quarterly Reviewer* above cited, seems to me to go too far in asserting that 'these penny histories are all imitated from [Ulenspiegel's] jests.'

said that the fortunes of Ulenspiegel among us since the 16th century, have been, like those of Markolf from the first, one more instance of the insularity which explains so much in the literary as in the political history of England. In Germany, in the Netherlands, in France even, its popularity has never died out, and in all three countries the whole interval between the gothic prints of three hundred years ago and the critical editions of to-day, is bridged over by a series of chap-book versions continuous enough to show that they never ceased to be read. England, on the contrary, during the whole period from Copland to Thoms and Ouvry (who reprinted it twenty years ago) witnessed but one attempt to revive it,—the translation made in the heyday of that Augustan age which has left so many strange evidences of its appreciation for the robust crudities of the sixteenth century<sup>1</sup>, and none more strange than this.

#### IV.

Markolf, the Kalenberger and Ulenspiegel, had all some FRIAR RUSH<sup>2</sup> degree of novelty. None of them had a precise parallel in

<sup>1</sup> I will merely recall the furore created by *Faustus* in 1727 and the new translation of the *Grobianus* in 1739.

<sup>2</sup> The active discussion of the Rush story dates from Thoms, who discovered the English version of 1620 among Douce's books, and reprinted it in the *Early English Prose romances*, vol. 1 (1827 and 1857). Soon afterwards Wolf and Endlicher discovered two editions of a H. Germ. version at Vienna, and reprinted them with a suggestive introduction (*Von Bruoder Rauschen*, Vienna, 1835). In the Weimar *Jahrbuch* Bd. 5, Oskar Schade reprinted the Low Saxon version, the only one known in German before Wolf and Endlicher, with the best critical account of the legend yet given. Finally the Danish version of 1555 was reprinted by C. Bruun, *Broder Russes Historie* (Kjöbenh. 1868), with an introduction, not comparable in any way to Schade's, but containing some new

English legend; each represented a variety or shade of humour which if not unprecedented was unfamiliar. But this novelty lay within narrow limits. The jester Markolf was only a more genial variety of Markolf the 'fool,' who had been familiar for centuries; the Kalenberger is a Skelton with a faculty for riddles; Ulenspiegel a plebeian and unlearned Scogin. In complete contrast with these was the story which remains to be discussed. Neither English history nor English folklore contained anything at all resembling the legend of Friar Rush in its original form<sup>1</sup>; if his jests were of an ordinary type, they derived piquancy from his wholly novel personality and situation. And when we add to this that his History is not a mere loose string of anecdotes, but a connected narrative with at least a glimmering of dramatic climax and catastrophe, it is not surprising that he should have altogether outdone his rivals in literary importance. The story of the disguised devil sent to corrupt a convent of monks with delicious fare, had an element of the same fascination which made the Faustus legend unforgettable; and, as will presently appear, it played a part not very far inferior in the English drama.

*The  
historical  
Rush.*

The historical germ of the Rush story is extremely obscure. Its scene was undoubtedly the most famous of Danish monasteries, the Cistercian convent of Esrom, planted by bishop Aeskil, in the early days of the Order, beside the wood-girt and legend-haunted Esrom lake<sup>2</sup>.

suggestions. Nyerup, Thiele, Grimm and others, who only commanded a part of the material, will be referred to in the notes.

<sup>1</sup> The relation of Rush to Robin Goodfellow will be discussed below.

<sup>2</sup> Hans de Hofman, *Samlinger af...Fundationer*, T. VII. p. 155. The fact that the lake had its legend is not irrelevant. I have not met with the mention of it elsewhere. 'Gamle Folk beretter,' says Hofman, 'at denne Søe har tilforn været, ligesom en anden Engbond,

The dissolution of the convent at the Reformation, led to the destruction of most of its antiquities; but in Pontoppidan's day there still remained a huge gridiron and cauldron, and the tradition of a portrait, with inscription, of Rus the friar and cook<sup>1</sup>.

The inscription, which has often been quoted, throws very little light on the legend<sup>2</sup>. At most the luxurious tastes attributed to the old priest, and the 'gray horse' which he bequeathed to the convent offer a slight foothold. The latest editor of any of the extant versions, Chr. Bruun, has attempted to supplement this meagre information from the scanty records of Esrom in the royal archives. A document of 1371 preserved there (Royal Library, gl. kgl. Saml. 4, 3124) contains an account of one Johannes Kraffse, a monk of Esrom, who 'at the devil's suggestion' had abandoned his orders and returned to the world<sup>3</sup>; the abbot applied for his excommunication, finally proclaimed in full form by the archbishop of Lund. This does not appear to

höstet, og at en Röst den Tiid sagde til Høst-Folkene: 'Staaer op at læse, Esse begynder at blæse;' derefter forlod endeel Moesen, andre blev af Vandet druknede.' No doubt many other lakes of comparatively recent formation have similar myths. A good popular description of Esrom and its legends is in Holger Bruun's *Gamle Danske Minder*, I. 294 ff.

<sup>1</sup> Pontoppidan says himself (*Danske Atlas* VI. p. 35): 'der skal endnu findes Broder Rusis Jerngryde og Rist.' Hofmann *Samlinger* &c. u. s. adds, rather naïvely, apropos of the unusual size of the implements, 'that 'the human bones dug up there show that the men of that day were of larger stature than now.'

<sup>2</sup> Hic requiescit Jon Præst

Qui semper comedebat det bæst, &c.

<sup>3</sup> C. Bruun, *Broder Russes Historie*, Kjöbenh. 1868, p. 13 ff. The ms. is difficult to read, and particular words are doubtful, but the sense is clear: instiganti scilicet dyabolo relictis religione et habitu monachali ad secundam [leg. *saeculum*]...est reversus, &c.

me to give much help. That the name corresponds with that of the epitaph counts for little ; particularly as the two lives, so far as appears, were wholly different. Johannes' abandonment of his vows is not recorded of Rus ; while the apparent reference of the act to diabolic suggestion, need mean no more than that the writer applied to Johannes' sin the current theological explanation of sin in general. Finally, Bruun's attempt to derive the name Rausch and Rus from this *Kraffse*—'bold' he himself calls it—is I think inadmissible. *Kraffse* or *Krause* might become in a German mouth *Rausch*, whence *Rus* by simple translation. But the loss of a sound so congenial to 'German lips' as *k*, in a favourite combination like *kr*, is not to be so easily disposed of.

But while this, as it stands, is certainly not an adequate hypothesis it must be admitted to be the nearest approach to one yet produced. There only remain the trifling suggestions of the epitaph. We find here not the slightest suggestion of 'diabolica instigatio'; on the other hand the *semper comedebat det bæst* offers a slight foot-hold for the essential trait, prominent in every form of the legend, that it was by means of the sixth deadly sin that the devil sought the corruption of the convent. 'Jon Præst' was clearly conspicuous for his good living. We cannot however suppose him to have stood alone, a solitary epicurean in an ascetic community ; the common life of a monastery excluded so complete a contrast ; one would rather imagine him to have taken a leading part in the more luxurious furnishing of the Esrom table which, there as elsewhere, replaced the early rigour of the Cistercians, to have been the Luther of a dietetic Reformation, in whom his opponents readily discovered an emissary of the devil.

This would agree with what evidently represents the oldest form of the legend known to us, the Danish prose *Märchen* printed by Thiele<sup>1</sup>. It tells simply that the devil, seeing the virtuous life of the monks of Esrom, assumed human shape, knocked at the door, and was admitted as cook's boy<sup>2</sup>. A favourable opportunity enabling him to dispose of his chief in a boiling cauldron he is appointed to his place. The virtue of the convent is now at his mercy; and it is not long before the monks forget prayer and fasting over Ruus' exquisite cookery. Strife and wantonness creep in, and the monks are all but lost when a peasant, who has involuntarily overheard a conclave of devils discussing their agent Ruus, discloses his true nature<sup>3</sup>. The abbot, summoning all the monks into the church, seizes Ruus, transforms him into a red horse, and commits him to the power of hell.

Such was probably the whole of the legend in its strictly Danish form. In the course of the fifteenth century it passed into Lower Saxony, was reproduced in verse with large additions, and this ampler version of the legend was then again transferred, about the middle of the sixteenth century, to its original home. The history of the myth in Denmark is thenceforth blended with that of the developed and in part foreign

<sup>1</sup> *Danske Folkesagn* II. 68; Wolf and Endlicher p. XVIII. It is given, in translation, by Schade u. s. and Thoms.

<sup>2</sup> To appreciate the significance of this choice of good living as the method of corruption, one needs to remember that in the mediaeval view, gluttony was one of the deadliest of the Deadly Sins, and that Dante could give even the *lussuriosi* a higher rank in the Inferno,—the second circle (canto V), than the *gulosi*, who occupy the third (canto VI).

<sup>3</sup> I cannot agree with Bruun that this scene, whether in the Danish or the German version, was the basis of the great scene in Lessing's fragment of *Faust*.

form of it given in the Danish poem<sup>1</sup>, to which, with the cognate versions in Low Saxon and High German, I now turn.

*The Low-Saxon, H. German, and Danish versions of Friar Rush.*

All three substantially agree, but differ considerably in style. The first, undoubtedly the oldest, is written in the most unpretending manner of the rhymed chronicle; it tells its story briefly, in simple sentences strung together with scarcely any articulation, and not the slightest rhetorical colour. Of the High German version this is also in the main true; it shows also the weakness of an unskilful verse translation, often expanding without necessity, and altering without improvement<sup>2</sup>. The Danish version, on the other hand, belongs to a different

<sup>1</sup> The first Danish allusion to his name, which does not occur before the 17th century in historical documents, is in Christen Hansen's *Dorothea* (see Appendix), 1531:—

Giiffve gwd hwer viil icke wære saa fuuss  
lligher uiss ssom them dieffvel broder ruuss.

(Bruun p. 17). Schade quotes it in modern spelling. The well-known testimonies of Hamsfort, and of Helvaderus (quoted by Pontoppidan), take us back only to about 1600, and may have been influenced by the legend. It is hardly worth while noticing the story solemnly recorded by Peder Resen and solemnly repeated by Wadskjär, *Poetisk Skueplads*, (Kjöb. 1741) p. 108, of a Copenhagen nobleman who in the early half of the seventeenth century was accustomed to frighten his children with Broder Ruus.

<sup>2</sup> Merely as an instance I quote the opening lines of the adventure in the hollow tree:—where the abbot sends for the cook to be his procurer.

Dâr nâ to einer tît broder Rûs  
hadde gewesen to lange van hûs.  
he hadde to der koken nicht gedacht  
unde quam gelopen in groter jacht.

Schade u. s. p. 391, vv. 183—6.

phase of literary art. It is a free paraphrase by a skilful writer, obviously emancipated from the conventional manner of the mediaeval romance,—a writer worthy to follow, in the work of translating into his mother tongue, the enlightened and patriotic Christiern Pedersen, with whose type, if Bruun's judgment may be trusted, the 1555 edition was printed<sup>1</sup>. In his hands the narrative gains vivacity, the verse rhythm and flow, the style colour and freshness<sup>2</sup>. Almost any page would serve for comparison; I choose one from the last,—the abbot's charge to Rus as he commits him to his final fate.

In the High German (Strassburg 1515) version this is expanded thus :

Uff einer zeit dar nach nicht lang  
rauschen sein schalckheit aber zwang.  
Er was zuom kloster auss gegangen,  
ob er möcht etwas news erlangen.  
Do mit het er den speiss vergessen,  
die die münch do solten essen,  
und do er das het überdacht,  
nach dem kloster ward im gach.

Wolf u. s. sig. A vi

<sup>1</sup> On Pedersen see C. J. Brandt's monograph *Om Lunde-Kanniken Christiern Pedersen og hans Skrifter* (Kjöbenh. 1882), and his edition of Pedersen's Danish writings in 5 vols, the last of which contains his versions of the Danish chronicles and additions, full of fervid national pride, to Saxo.

<sup>2</sup> Bruun hardly overstates the case when he remarks, (with an exultation pardonable to a Dane in 1867): 'In the Danish *Broder Rus* there is an exuberant gaiety...which the German poems lack, and it displays a dramatic action which in the German will be sought in vain.' *Broder Rus*, p. 3. Cf. his illustrations pp. 4—9. No previous writer, German or English, had I believe noticed the distinct character of the Danish version, evident even in the extracts given by Nyerup.

This is the H. Germ. version, which, and not the Low Saxon<sup>1</sup>, was the basis of the Danish.

Der apt sprach: 'hie leyt nit ferne  
ein berck, do solt du wonen gerne,  
solang bis kumpt der jungste tag,  
vor dem sich niemant verbergen mag.  
du solt auch [nie] kummen von danne  
das du nit beschedigst weib und manne.'

This becomes in the Danish :

Abbeden suarede met alffvers tale  
jeg vil dig ey lenger forhale.  
Icke langt her fra jeg siger dig dette  
ligger et greseligt øde sted  
Der skalt du bo til euig tid  
oc aldrig mere komme hid  
Eller nogen sted i andre land  
du skalt ey skade quinde eller mand  
Du skalt ey skade fisk eller fæ  
ey hus, ey marck, ey skou eller træ  
Eller nogen anden verdsens creature  
men ligge der til domme dag oc lure<sup>2</sup>.

<sup>1</sup> I am not aware that this has been pointed out. It is clear however from internal evidence. The passage quoted in the text, for instance, is represented in the Low Saxon by:

de abbe to eme sprak 'hir licht verne  
eine borch, dâr schalstu gerne  
in singen unde ôk dâr tô lesen  
unde êwich dâr uppe wesen.  
du schalst dâr nummer mêr ute kamen.'

The special prohibition to injure mankind, on which the Dane rings the changes for four lines, is only contained in the High German. The Danish notion of a 'grim waste spot' is also obviously due to the H. Germ. mistranslation *ein berck* for the L. Saxon *eine borch* which reappears in the English *a castle*.

<sup>2</sup> The Danish version can however be concise as well as elaborate; its length therefore, (rather over 600 lines) is not much in excess of the H. Germ. (572 in Schade's reprint of Gutknecht's edition): while the excess of the latter over the Low Saxon (428) is a fair measure of its variations, which are mostly expansions.

One other peculiarity of the Danish version has not I believe been pointed out. It repeatedly deviates from the German account, where this differs from the native Danish legend, to follow the latter. Thus the abbot in the former asks Rausch's name, not on his first interview, but on despatching him as procurer. The Danish version corrects this. In both Danish versions too,—trifling as the matter is,—Rus takes one quarter of the slain cow, whereas the more robust Rausch carries off a half. In more important deviations, however, the Dane follows his German authority even for the worse. To give a crucial instance, he fully adopts and even amplifies the dark picture which the Saxon had drawn of the original moral state of Esrom, in the face of the completely contradictory Danish tradition. According to the latter it is the exceptional virtue of the convent<sup>1</sup> which attracts the diabolic assault, according to the former its exceptional godlessness<sup>2</sup>; in the Danish view the blamelessness of Esrom, like Job's, makes its conquest an alluring problem, in the German, its corruption offers it a temptingly easy prey. The former is undoubtedly the stronger, as well as the more original, motive; there is an evident awkwardness in the despatch of a tempter to men already committed to at least one deadly sin. If it were doubtful, there are two testimonies

<sup>1</sup> The devil saw *hvor fromt og dydigt munkene levede paa Esrom kloster*. This contrast is noticed by Bruun.

<sup>2</sup> Thus the Low-Saxon:

Dâr weren moniken in ein dêl  
 se weren junk und dâr tô gêl  
 svarte cappen drogen se dâr  
 se en deneden gade nicht en hâr.  
 ein islik hadde dâr ein wîf:  
 des quam under se manigen kîf.  
 ere levent de duvel wol vornam, &c.

which would go far to settle it: that of Goethe, who prefaced his *Faust* with the prologue of the book of Job; and that of the shrewd playwright Decker, who in handling this very story of Rush, as we shall presently see, was led back by sheer dramatic instinct to the original legend, in the face of every version of it which he can possibly have known<sup>1</sup>.

*Rush's  
after-  
history.*

I have still to speak of the most remarkable new feature of the German versions: the after-history of Rush. Transformed into a horse, he crosses the sea to England, possesses the king's daughter, and yields only to the exorcism of his former abbot, summoned for the purpose from Esrom. As penance he is made to carry a load of lead for the abbey roof, the king's gift, together with the abbot himself, back to Denmark; and is finally banished to a solitary castle, with the strict charge, already quoted, to refrain from further injury to man or woman.

Schade is I think undoubtedly right in regarding this as modelled, in Lower Saxony, on the legend of St Zeno, which a still extant Plattdeutsch poem shows to have been current in the same district. Zeno, like the abbot, has entertained the devil unawares in the disguise of his own son. When the fraud is at length discovered the devil goes 'into the east,' and possesses a king's daughter. Like Rush, however, he discloses the name of the man who is able to exorcise him. Zeno is summoned; a devil in horse's shape bears him to the eastern

<sup>1</sup> Another case in which the later Danish version has described an obviously better motive of the earlier, is in the scene where the farmer whose ox Rus had slaughtered, is an unwilling witness of the devils' conclave from a hollow tree. In the former, as in the German versions, he is made to take refuge there from mere fatigue; in the latter in order to wait the return of the thief, who has hung the remainder of the ox on a tree opposite.

court, where he casts out the fiend, and then returns home as he had come<sup>1</sup>. An ordinary saint's miracle legend was then grafted, incongruously enough, upon the original Rus story. Rus's sharply defined task of corrupting Esrom with dainty cookery is exchanged for vague feats of possession; and the abbot once conspicuous for his vices is suddenly invested with the saintly privilege of exorcism.

Such was the form in which the legend of Rush, *The English Friar Rush.* after traversing Germany and Denmark, finally reached England. The well-known prose History, entered in the Stationers' Register 1567-8, was already in every one's hands by 1584, when R. Scot, in an often-quoted passage referred his readers to it. The first extant edition (1620) is a paraphrase very much looser than even the Danish, and made probably from one of the High German (Nürnberg) editions, which appeared between 1550 and 1582<sup>2</sup>. It is a rather verbose narrative, with not only a host of new details, but so much fresh incident that it stands to the German versions almost in the same relation which these bear to the original Danish legend. In all these, for instance, the origin of Rus' adventure is dismissed with a single phrase,—'the devil seeing the evil ways of Esrom, disguised himself as a cook, and knocked at the door.' But the translator saw his opportunity, and the story of Rush's journey is introduced by a sketch of the diabolic council which authorises it. So again, the adventure in which Rush, belated at a distance from home, provides dinner for the convent by the extempore slaughter of an ox, is worked up into an elaborate narrative which accounts for Rush's

<sup>1</sup> This description is based upon Schade's abstract (u. s.) of the S. Zeno legend, which I have not myself seen.

<sup>2</sup> Cf. Schade u. s., p. 360.

long absence by help of a tavern scene, where he 'found good fellowes playing at cardes, and drinking and making cheare, then Rush made obeysance to them and sate downe among them,...and afterward he fell to play, and was as merrie as any man in the company: and so long he played and passed the time, that cleane hee had forgotten what he had to doe at home,' &c.; and when Rush at length reaches the abbey laden with his two quarters of beef, the translator once more calls us in on his own authority to see them dressed and cooked.

All this however was merely the result of the familiar attempt to adapt the simplicity and abstract language of the verse romance to the genius of an English prose story, with its insatiable love of incident, for crude detail, its anxiety to bring everything before the eye. But there are differences which strike deeper than these. The English Rush has obviously been modified by two distinct influences, one of them purely English, the other, like Rush himself, a quite recent result of intercourse with Germany. Ulenspiegel, though essentially of a different mythic type, bore too striking a superficial likeness to Rush to be kept completely distinct; and the mutual attraction was the greater since one of Ulenspiegel's adventures occurred in a convent. It is as a verger in the abbey of Marienthal that being told to 'count the monks' as they came to 'evening mass, he cuts away the steps by which they descend, and 'counts' their prostrate forms on the floor (No. 89). This, and the other still duller jest with the Hildesheim merchant, whom he serves as kitchen-boy (No. 64: being told to grease the carriage he greases the seat) are introduced into the English History of Rush, obviously because he also served in a kitchen and in a convent. Obviously too they are quite out of place there. Pure types of the merely wanton

quibbling humour of Ulenspiegel, they are quite foreign to the politic devil whose jesting is only a mode of strategy.

More interesting is the second case. Robin Goodfellow, like Ulenspiegel, bore a certain but also only superficial resemblance to Rush. His 'merry pranks' are neither diabolic strategy, nor wanton outrage, but freaks of good nature tempered now and then by just resentment. We have already seen how his legend was mutilated under the powerful influence of the German Ulenspiegel: in revenge, the German Rush was now attracted still more completely by his. There were obvious points in the myth of Rush to suggest the comparison. If Rush was not originally a water-elf, as Schade supposes, his story was at least full of elvish traits<sup>1</sup>. The evil spirit disguised as cook recalled the household service for which Puck was famed, the swimming horse into which he is transformed was paralleled by equally familiar feats of transformation. That England was the goal of his journey was itself a trait of elf mythology<sup>2</sup>. It was therefore in no way an abstruse process which led to his intimate connexion with the native English kobold. This had consequences far more disastrous to the congruity of the story than the addition of the Zeno myth, far more than even the surreptitious dash of Ulenspiegel. Not merely is a story introduced

<sup>1</sup> Cf. Schade u. s. p. 382 f., where this is well worked out. Wright's essay (*Essays on the Middle Ages*, II. 1 ff.) contains a quantity of material on this head, rather loosely and popularly treated.

<sup>2</sup> On England as the mythic home of elves and nightmares, see Schade u. s. p. 383. Schade is wrong however in saying that the horse is Rush's 'original' form; the passage of the English version from which he argues implies the exact opposite. Rush is there said to be changed [from a horse, which he already was] 'to his original form,' viz., I suppose, that of a devil.

which though hardly founded on any extant legend of Goodfellow, is completely in his manner, but the central incident of the second part of the History is radically transformed in the same sense<sup>1</sup>. The first is the tale of Rush's intervention between an unfortunate married man and his wife, to the complete discomfiture of the interloping priest. Rush's mission of corruption is here obviously forgotten. In the other case, he passes still more explicitly through the whole interval which separates the devil from the good-natured kobold. Instead of 'possessing' the king's daughter, he becomes the means of restoring her sanity. Having taken service, as 'a poore young man,' with a gentleman<sup>2</sup>, he is asked by his master 'as they went talking together,' whether he knew of any man 'that can conjure a spirit out of a woman's body.' Rush makes no doubt of his ability to find one, passes across the sea to Esrom, fetches the prior, who performs the cure, and is then brought back as he had come,—a still closer parallel to the Zeno story, it is clear, than the German versions. After this, the banishment of Rush into the castle, and his sudden resumption of devil nature, becomes still more incongruous.

But the process of assimilation to Goodfellow was destined to be carried still further. By a chance certainly rather unusual in England, but by no means unexampled or anomalous as has been thought<sup>3</sup>, Friar Rush

<sup>1</sup> This is briefly noticed by Lappenberg, *Ulenpiegel*, p. 228.

<sup>2</sup> The substitution of a 'gentleman,' for the 'king' of the original Rush legend is characteristic of the legend of Robin Goodfellow, a household spirit who does not haunt palaces.

<sup>3</sup> Wright (*Essays* &c. u. s.) goes so far as to suggest that there was a native English Friar Rush. But similar transplantations abound in comparative mythology. Even in quite recent times

passed from the pages of the German story-book into the living folk-lore of England. Long before the appearance of the English translation, he was a familiar figure, in company with such popular favourites as the Nine Worthies and the Prodigal Son, on the painted cloth hangings of taverns;—the cloth being probably imported, as such arras mostly was, from the Netherlands, the medium of almost every German legend which reached us. Here however he was still distinctly the disguised devil; the graphic lines in *Gammer Gurton's Needle* make this clear<sup>1</sup>. A generation later he has undergone a remarkable transformation. Not only has the alien completely established himself in the fearful fancy of rural England, but in the process he has put on the likeness of the rest of the rustic pantheon whose dominion he shared. From Christian he has passed over into Teutonic mythology. The English pucks and goblins have admitted him into their merry company; and the devil forgets his mission, and condescends, like Good-fellow, to play the village censor, and to stickle for propitiatory bowls of cream<sup>2</sup>.

something very like it has occasionally occurred; only the other day M. Maspero had to warn the Egyptological world that some tales of his own collection, casually related to some Arabs at Thebes, were already circulating in the country as quasi-native legends. And probably not a few English children are brought up, as the present writer was, in the faith of the German Santa Claus.

- <sup>1</sup> Saw ye never Fryer Rushe  
 Painted on a cloth with a sidelong cow's taylor,  
 And crooked cloven feet,.....  
 Looke, even what face fryer Rushe had, the devil had  
 such another.

<sup>2</sup> The passage in Harsenet's *Declaration* 1604, has been often quoted: 'If that the bowle of creame were not duly set out for

*Rush in  
after  
literature.*

To all appearance however, this complete assimilation to the English household sprites, was confined to the region of folklore. In literature, the literary version of the legend kept its hold; and of the two dramas which were probably based upon it, the only one which is extant drops altogether the kobold element, and is in fact, as we shall presently see, nothing but a set of ingenious and in parts effective variations on the original theme of the Devil-cook. Before discussing this name at length, it remains to speak very briefly of the second, to the nature of which the sole clue is unfortunately its title and its author's name.

*Dramas.*

<sup>1.</sup>  
*'Friar  
Rush and  
the Proud  
Woman of  
Antwerp,'  
1601.*

In July, 1601, Henslowe referred in his Diary to a drama called *Friar Rush and the Proud Woman of Antwerp*, then in course of composition by two of the staff-dramatists of his company, Day and Haughton. The title gives no direct clue to the plot; for the 'History' knows nothing of Antwerp, nor of any woman specifically 'proud.' It is nevertheless plausible to suppose that the story of Rush's intervention between a wife and her clerical lover has here been simply transferred to new scenery and circumstances. Without discussing further an insoluble question, I will merely raise one alternative hypothesis. I shall have to notice, in speaking of Decker's Rush drama, the remarkable Novella of Macchiavel on the 'marriage of Belphegor,' to which Decker has been supposed to owe more than is I think the case. Belphegor is an Italian counterpart of Rush, despatched by Lucifer on a special mission to earth, not to tempt and corrupt, but to test, by a ten years' experience, the truth of men's universal abuse of marriage. And the whole point of the story lies in his taking as his wife one

Robin Goodfellow, the *frier*, and Sisse the Dairy maid, why then either the pottage was burnt the next day, or &c.'

who is not only a 'proud woman,' but characterised almost solely by her pride<sup>1</sup>. Finding his domestic life at Florence unsupportable, Belphegor makes his escape; and, like the German Rush, devotes himself to 'possession.' The part of the prior is played by a former benefactor of his, to whose exorcism he on several occasions willingly yields, in token of his gratitude. Finally however, conceiving that the service has been sufficiently repaid, he refuses obedience, and all the devices of exorcism fail to extract him from the possessed princess, until it is intimated that the 'proud woman' of Florence is on his traces; when in dire terror he precipitately breaks out and takes flight to his native realm. It is obvious that this plot, which can hardly have been unknown to the scholarly and cultured Day, would give a point to the title of this lost play which on the other hypothesis it does not possess. I hasten however to turn from this perhaps idle speculation, to more solid ground,—the indubitable Rush-drama which Decker a dozen years later concealed under the fantastic title: *If this be not a good play, the Divell is in it*<sup>2</sup>.

For boldly planned and all-embracing infernal machinery, the play has no rival in the Elizabethan drama. Faustus, not Mephistophilis, is the real starting-point of the action of Marlowe's play, Prospero, not Ariel or Caliban, of that of the Tempest; if the witches initiate the plot of *Macbeth*, or Fortune that of *Fortunatus*, they take no active part of it. Here, however, the realm of

2.

Decker:  
*If this be  
not a good  
Play, the  
Divell is  
in it.* 1612.

<sup>1</sup> 'Aveva Onesta...portato in casa Roderigo insieme con la nobiltà seco, e con la bellezza, tanta superbia, che non n'ebbe mai Lucifero.' So again: 'l' insolente natura di lei.'

<sup>2</sup> I am not aware that Decker's play has been noticed by any writer on the Rush legend, in connexion with it. I have accordingly treated it at some length.

Pluto supplies both the first spring of action, and the main actors, who, after setting the intrigue afoot, dexterously guide it from point to point up to the desired catastrophe. The opening scene is an altercation of Pluto and Charon which reads like a rude reminiscence of Lucian. It is hard times with both, for 'Ghosts come not now thronging to my boate, But drop by one and one in;' and the royal table needs replenishing. To meet the pressing emergency, three fiends are hastily despatched to earth. Ruffman takes a Courtier's disguise, and makes for the court of young Alphonso of Naples; Grumshall puts on the citizen's 'treble ruffles' and goes to take service with Barterville, a well-reputed Naples merchant, and Shackle-soule, assuming the 'grave habit' of a friar, seeks 'the Friery best fam'd in Naples for strict orders.'

This opening scene was supposed by Langbaine to have been suggested by Macchiavelli's well-known *Novella*, already mentioned, on the marriage of Belphegor. Mr Halliwell, following him, asserts less guardedly (*Dict. of Old Eng. Plays*), that 'the principal plot of the play is founded on' the *Novella*. The latter statement is quite inadmissible, as any reader of the two works will perceive. The former appears to me very doubtful. Macchiavelli's tale, which is scarcely more than a *jeu d'esprit*, certainly opens with the despatch of a fiend to the earth in human shape, but, this fancy, of which he was certainly not the inventor, or the chief representative, is used as we have seen, with a motive and in a manner quite different from Decker's. It is simply a satire on marriage. The whole management of the scene is moreover different; Macchiavelli's Hades is the council-chamber of an Italian Senate, Decker's might pass for some tavern haunt of Thames watermen. Decker's fiends are the drudges of Pluto, abused for their indolence, flogged at will, and

peremptorily sent where he chooses. Macchiavelli's are fiends whose advice he requests with the gravest courtesy and deference, and who give it with dignity and independence<sup>1</sup>.

But the whole comparison with the *Novella* is in fact superfluous, for a much closer suggestion of the scene is to be found in the book which supplied, as we shall see, the foundation of the main plot,—the *Pleasant Historie of Frier Rush*. The opening chapter tells in its simple way after recounting the corruption of the friars, how the great Prince of Devils, when he 'understood of the great misrule and vile living of these Religious men, consulted to keepe them still in that state, and worse if it might be...*Belphegor* who was Prince of Gluttony, *Asmodeus* Prince of Lechery, and *Belzebub* Prince of Envie, with many other Divels assembled together... And as they were all assembled together with one accord: they chose a Divell to goe and dwell among these Religious men, for to maintaine them the longer in their ungracious living, which Divell was put in rayment like an earthly creature, and went to a Religious house...'

From this hint Decker took the whole conception of his play. The adventures of Rush in the convent would have been in themselves, however, too meagre fare for the highly seasoned palate of the playgoer of 1612, for whom double and treble plots were rapidly becoming an indispensable dramatic luxury; the monastic scenery was moreover unfamiliar and somewhat unreal. He accordingly produced two other stories, closely modelled on that of Rush, but carrying us into the two worlds in

<sup>1</sup> Although, he says, *diletissimi mei*, I am king by divine will, yet *perchè egli è maggior prudenza di quelli che possono più, sottomettersi alle leggi, e più stimare l'altrui giudizio, ho deliberato essere da voi consigliato, &c.*

which the imagination of a London audience was most at home,—the City and the Court. The main action is accordingly woven of three distinct threads which only at the close become in some degree entangled. The three fiends do their work of corruption independently in their three spheres. In each case they begin on virgin soil<sup>1</sup>. The young king announces intentions of the most exalted virtue; his time will be devoted to old soldiers and poor scholars; he forgives his debtors and bids his prostrate courtiers kneel only to God. The merchant, though without any virtuous prepossessions, has hitherto kept within the verge of honesty. And the friars are accustomed to spend the sad day wholly in religious fasts and ‘meager contemplation.’ But a very brief experience of the suggestions of our worser nature suffices to overthrow these unstable pillars of morality. A few elegant phrases from Ruffman, the distinguished ‘Helvetian,’ convince Alphonso that pleasure is the appointed end of kings; and he is suddenly transformed into a miracle of lust and tyranny, contemptuously dismisses not only the old soldier and the poor scholar but his bride, and is finally brought to the verge of ruin by her father’s vengeance. Old Bartervile, the merchant, falls an equally easy victim to the snares of his cunning clerk, and is presently found vigorously practising what he calls the *true Citie doctrine*, that *Nature sent man into the world (alone), Without all company, but to care for one*;—

<sup>1</sup> A judicious divergence from the *Historie*, where they are ‘full of wantonnesse’ from the first. Decker is thus brought back by sheer dramatic feeling to the original conception of the story, embodied in the phrase of the Danish legend, that the diabolic assault was excited by seeing *hvor fromt og dydigt Munkene levede*. We may perhaps detect here the influence of the grand prelude to the book of Job.

*And that ile doe.* And the friars at once succumb to the fascinations of rich fare provided for them by Shackle-soule under the notorious name of RUSH.

The details of this last transformation are in the main cleverly adapted from the romance. In the first friary scene (Decker, ed. Hazlitt, III. 280) Rush appears as junior novice, preparing the conventual table,—‘So; the Lord prior’s napkin here,...his knife and case of pick-toothes thus,’ and *nimble as a drawer in a new Tavern*. It falls to his lot to say the grace which sanctifies the dinner of herbs and cold water, and he does it in a fashion on which nearly all the boasted asceticism of the convent goes shipwreck:—

Hum, hum,  
 For our bread, wine, ale and beere  
 For the piping-hot meates heere:  
 For brothes of sundrie tasts and sort,  
 For beefe, veale, mutton, lamb, and porke,  
 Greene-sawce with calves head and bacon,  
 Pig and goose, and cramd-up capon,  
 For past raiz’d stiffe with curious art,  
 Pye, custard, florentine and tart,—

and so forth through a gamut of continually ascending exquisiteness to the climax of ‘oyster-pyes, butter’d crab, prawnes, lobsters thighes.’ The burst of indignation which follows is evidently not quite genuine, and little difficulty is felt in assenting to the acute logic with which Rush argues that *Anima sequitur temperaturam Corporis*, —‘and hee that feedes well hath a good temperature of body, *Ergo*, he that feedes well hath a good soule.’ One only, the Sub-prior,—breaks the unanimity with which it is resolved that Rush, who declines to be cook himself, shall give the cook lessons against night, ‘for fare abundant and delicious.’ ‘Rush thart some Angel!’

exclaims the prior, enthusiastically. 'Rather, mutters the Sub-prior, some divell sent to bewitch our soules<sup>1</sup>.'

The following scenes are occupied with working out two motives, Rush's quarrel with the Cook, and his attempt to corrupt the isolated virtue of the Sub-prior. The former alone had any basis in the Romance. In the first scene (u.s. p. 303 ff.) the friars are met by the Sub-prior hastening under the lead of Rush to their Vines. 'Your Vines?' cries the Sub-prior,

—this Serpent here,  
Has with that liquorish poison, so set on fire,  
The braines of *Nicodeme* and *Silvester*,  
That they in drunken rage have stab'd each other.

Yes, retorts Rush,—

They bleede a little, but have no harme,—  
They brawld and struck, but I kept off the blowes,  
Yet the Sub-prior saies from me their quarrell rose.

And he proceeds to vindicate his character as one who 'repines to see vice prosper,' by telling a slanderous story of the Cook<sup>2</sup>.

<sup>1</sup> The romance contains merely a general hint for this scene. It is only after the death of the Master Cook that Rush replaces him, and that the improved fare begins: 'Thus Rush became Maister-Cooke in the Kitchin, and dressed their meate mervailous well: for in the Lent, and in the Advent, both Fridayes and also other dayes, he put Bacon into their pottage pot, &c....insomuch that the Priour and all the Friers...said he did much better than their other Maister-cooke, &c.' (chap. III.). The antipathy of the Prior and Sub-prior is touched in chapter IV. but the idea of making the latter represent the moral Opposition is Decker's own.

<sup>2</sup> This scene combines a hint from Chap. IV. of the romance,— 'How Frier Rush made Truncheons for the Friers to fight withall,' and then plays the indignant peace-maker,—with the bias against the Cook there indicated by the act of putting him into the kettle (chap. II.); as well as with the general motive of corruption by good fare.

After a passage in which Rush vainly attempts to corrupt the insensible Sub-prior with gold<sup>1</sup>, we arrive (p. 325) at a scene obviously founded on the eighth chapter of the romance. Scumbroth, the cook, who has proved less incorruptible, is found, like 'the prodigall child in the painted cloth'—all his money spent and gone, taking refuge in a grove near Naples. There, like the farmer of the *Historie* whom Rush has robbed of his heifer, he unwillingly witnesses the meeting of the Devils which discloses the character of Rush. 'Lucifer and divels' enter with thunder and lightning; Rush and his fellows follow; they 'sit under the tree all about him,' and Lucifer demands an account of their work in Court, City and Friary<sup>2</sup>. Rush is the last to speak:

*Luc.* Hath *Rush* lyen ydle?

*Sha.* Ydle? no Lucifer.

*Scu.* (aside). All the world is turnd divell. *Rush* is one of them.

*Sha.* Ydle? I have your nimblest divell bin,

In twentie shapes begetting sin.....

I am fishing for a whole schoole of Friers,

Al are gluttoning or muttoning, stabbing or swelling,

Ther's onely one lambe scapes my killing,

But I will have him<sup>3</sup>.

<sup>1</sup> A speech here is in Mr Hazlitt's edition (p. 310), wrongly attributed to Rush, instead of the Sub-prior. The speech opens with the word '*Rush!*' which Mr Hazlitt or his copyist has converted into the name of the speaker, and placed in the margin.

<sup>2</sup> The romance describes how the Farmer 'came to an hollow tree wherein he sate him downe,...and he had not sitten there but a while; but anon there assembled a company of Devils, and among them they had a great principall Maister whose name was *Lucifer*, and he was the first that spake: and the first that was called, was a Devill named *Belzabub*, and with a loud voyce, he said unto him: *Belzabub*, what hast thou done for us?'

<sup>3</sup> Cf. the romance chap. viii.; 'Then foorth went Frier *Rush* freshly, and with a good courage, and said: Sir, I am in a Religious

The cook, like the farmer, reports the real character of Rush to the Friars (p. 342). In the conclusion the friary becomes the centre of the action; the King in friar's disguise seeks refuge there from his enemies, Barterville, similarly, from his dupes and creditors, and the whole issues in an infernal catastrophe, far inferior to the prelude, in which Barterville appears in torments in company with the heroes of the most sensational contemporary crimes, Ravallac and Guy Fawkes.

The play was evidently written with haste, and Decker's taste for the preternatural has allowed him to daub more than one page with the cheapest kind of pantomime devilry. But it has this ground of interest, that it shews once more, and more completely than elsewhere, the kind of flower and fruit which a very crude German legend was capable of yielding under clever treatment in the stimulating air of the Elizabethan drama. The mere reproduction of the story of the Friar is of little consequence in comparison with its widened scope. The 'diabolic mission' which originally served as a jest against the monks in an age when they were the mark for the abuse of every satiric pen in Europe, was extended to the more complex society of the seventeenth century, in which monasticism might claim to have handed over the better part, not only of its old wealth and power, but of its old vices to the City and the Court. No doubt there was something grotesque in this transfer

place, and I governe the Priour and his Covent as I will myselfe, and they have me in great love and favour?...Then said the maister Devill to Rush; if thou have done as thou hast said, thou hast done well thy part, and I pray thee be diligent thyselfe about thy businesse, &c.' The more churlish Lucifer of Decker only imitates this courteous rejoinder so far as to bid him, 'goe, ply your workes, our Sessions are at hand,' (p. 329). It is a singular inconsequence that the *Pluto* of the first scene is here replaced by the *Lucifer* of the romance.

of a mediaeval diabolic motive to a wholly modern world, in the spectacle of a devil bound apprentice to a merchant, counting crowns and studying mortgages like any Ralph or Robin of Cheapside; but this is the fault of Decker's genius rather than of his conception. For it is impossible to ignore that, with no other help than his sound playwright's instincts, and without a suspicion of its immense potentialities, he had stumbled upon the very idea afterwards carried out in Goethe's *Faust*,—the recasting of an old devil-story in terms of modern society. The polished urbanity of King Alphonso's guest, the ironical serviceableness of the merchant's clerk, already at isolated points recall the Mephistophiles of Goethe rather than that of Marlowe, and assuredly there is no scene in Marlowe's *Faustus*,—the immortal opening and close always excepted—at all equal in conception to Decker's pictures of the sudden transformation under temptation of a court of frail idealists and a convent of only half voluntary ascetics. Unhappily, however, Decker was after all little more than a hack with ideas, and the pinch of want probably contributed to make his work still less really significant than his total want of intellectual seriousness, of the brooding faculty, the austere enthusiasm of a great artist for his art, would in any case have permitted it to be.

The production of such a piece as the *If this play be not good* in the second decade of the seventeenth century was in some sense an anachronism, and the supernatural machinery, imperfectly welded as it was in the texture of an otherwise thoroughly realistic drama, was probably more congenial to the mob of all ranks<sup>1</sup>, to the public

<sup>1</sup> It is a mistake to ascribe this taste to the 'groundlings' alone; the prologue in which Jonson uses the phrase is directly addressed to the 'grande'es' upon the stage.

whom Jonson twitted with its untiring devotion to another famous devil-drama—‘your dear delight, the *Devil of Edmonton*’—than to the more fastidious critics of whom Jonson himself was the most eminent. Nevertheless, with all Jonson’s evident disposition to be sarcastic over the crude supernaturalism of the popular devil-drama, they offered something which was capable of being assimilated by his own far greater and more thoughtful art; and it is not difficult to understand how, four years after Decker’s play, he came to produce a devil-drama of his own, in the prologue of which he implicitly courts comparison with his two predecessors<sup>1</sup>.

B. Jonson:  
*The Devil*  
*is an Ass.*  
1616.

Jonson had in fact so far the Aristophanic quality of genius, that he was at once a most elaborate and minute student of the actual world, and a poet of the airiest and boldest fancy, and that he loved to bring the two rôles into the closest possible combination. No one so capable of holding up the mirror to contemporary society without distorting the slenderest thread of its complex tissue of usages; no one, on the other hand, who so keenly delighted in startling away the illusion or carefully undermining it by some palpably fantastic invention. His most elaborate reproductions of the everyday world are hardly ever without an infusion of equally elaborate caprice,—a leaven of recondite and fantastic legend and grotesque myth, redolent of old libraries and antique scholarship—furtively planted, as it were, in the heart of

<sup>1</sup> Shew this, he cries to the grandees who cumbered the stage,  
Shew this but the same face you have done  
*Your dear delight, The devil of Edmonton.*  
Or, if for want of room it must miscarry,  
’Twill be but justice that your censure tarry,  
Till you give some: and when six times you have seen’t  
*If this play do not like, the Devil is in’t.*

that everyday world of London life, and so subtly blending with it that the whole motley throng of merchants and apprentices, gulls and gallants, discover nothing unusual in it, and engage with the most perfectly matter of fact air in the business of working it out. The purging of Crispinus in the *Poetaster*, the Aristophanic motive of the *Magnetic lady*, even the farcical horror of noise which is the main-spring of the *Epicæne*, are only less elaborate and sustained examples of this fantastic realism than the adventure of a Stupid Devil in the play before us. Nothing more anomalous in the London of Jonson's day could be conceived; yet it is so managed that it loses all its strangeness. So perfectly is the supernatural element welded with the human, that it almost ceases to appear supernatural. Pug, the hero of the adventure, is a pretty, petulant boy, more human by many degrees than the half fairy Puck of Shakspeare, which doubtless helped to suggest him<sup>1</sup>, and the arch-fiend Satan is a bluff old politician, anxious to ward off the perils of London from his young simpleton of a son, who is equally eager to plunge into them. The old savage horror fades away before Jonson's humanising touch, the infernal world loses all its privilege of peculiar

<sup>1</sup> The conception of a 'stupid devil' (*dummer Teufel*) though not precisely unfamiliar, had not obtained much currency in English literature. The devil of the Mysteries was regularly beaten by the Vice, but no attempt was ever made to emphasize the inferiority of intellect possibly implied in this form of receptivity. The Merry Devil on the other hand is far more distinctly a *stupid* devil; and even the quick intellect of Shakspeare's Puck betrays a flaw when he involuntarily roughens the path of true love for the wrong pair of lovers. In name, and in a certain pretty boyishness, the last reappears in Jonson's Pug; but on the other hand he is much more essentially dull than any of his predecessors, and his story is of a wholly different cast.

terror and strength, and sinks to the footing of a mere rival state, whose merchandise can be kept out of the market and its citizens put in the Counter or carted to Tyburn.

The characteristic conception of Decker's prologue, that the world is becoming a full match for hell, and needs to be attacked with the utmost art and policy, meets us here in a more developed form. Decker makes the souls evade Charon and his pence, and Pluto angrily forbids him to raise his fare lest men should find him 'so damned deere, [They] will not come to hell, crying out th' are heere Worse racke (*sic*) then th'are in tavernes.' Jonson's Satan is equally politic. Pug is 'too dull a devil to be trusted Forth in those parts;...the state of hell must care Whom it employs, in point of reputation, Here about London.' The trusted agents of fifty years ago, the venerable Iniquity, the once terrible Vice 'in his long coat shaking his wooden dagger,' are wholly un-serviceable against an astuter generation, which breeds its own Vices, as it does its own horses :

We still strive to breed,  
And rear up new ones; but they do not stand,  
When they come there, they turn them on our hands;  
And it is fear'd they have a stud o' their own  
Will put down ours.

Act. I. Sc. I.

And the action fully confirms these melancholy forebodings. Pug finds himself in a world where he and his fellows count for very little,—a world immersed in practical schemes and matter of fact business, in draining swamps and finding a market for toothpicks;—and he feels himself an anachronism. The whole business of the play goes on with scarcely an exception exactly as if he were not present; he is the fly upon the engine-wheel,

fortunate to escape with a bruising; instead of spoiling human plans, he hangs helplessly in the background, or awkwardly intervenes to no one's disadvantage but his own. The *denouement* of the general intrigue has no influence upon the *denouement* of Pug's fortunes; he comes to grief through none of his misdeeds in connexion with the main plot, but on account of the preliminary theft of clothes which enabled him to enter on it. Thus the Stupid Devil, instead of being essential to the action, like the Merry Devil and the fiends of Decker, has really nothing to do with it. Notwithstanding the complete difference of treatment however, it is evident I think that Jonson was here working out in his own fashion the idea on which Decker had fallen in the effort to turn the old *Rush* story into a play,—of a diabolic romance of adventure, in the modern world, of a humanised devil not making compacts with the magician or the witch, but taking service with the city merchant and the country gentleman<sup>1</sup>.

*The Devil is an Ass* nevertheless symbolises aptly enough the obsolescence of supernaturalism of every kind in our older drama, and Jonson's sense of it. The devil of the theatre was for the time played out, or survived only in the artless pantomime puppet show, or the wilfully eccentric art of the Masque; and Jonson's helplessly outwitted Pug is a type of the senile stage,—‘sans eyes, sans teeth, sans everything’—which preceded his complete extinction.

The course of the present chapter has thus brought us close to the subject of the last, as the last here and there unavoidably anticipated the present. The keen mutual attraction of the ideas of roguery and devilry

<sup>1</sup> Pug enters the service of Merewater, as Lurchall that of Barterville.

continually tended to fasten them on the same object. Faustus and Fortunatus use their magic powers in the very spirit of Owlglass ; and Rush, the Owlglass of monasticism, is taken for a devil in disguise. And the fact that, of the four stories we have reviewed, that of Rush alone got a serious footing in our literature, is one more evidence of that singular quality of the second-rate Elizabethan mind, which made the meanest story with a flavour of devilry often more fascinating than any degree of brilliance or beauty without it. Precisely these four stories serve to illustrate the law which seems to have controlled so largely our borrowings from Germany—that where there was abundance both of better and worse work, we chose a very little—of the worse. An inverted evolution seemed to have specially sanctioned the survival of the weakest and most unfit, and heaped the honours of literature upon buffoons like Owlglass and Rush, while it left the good jests of Markolf and the Kalenberger to grow musty in forgotten prints.

From the Jester we pass naturally to the FOOL :—one, however, whose motley is no longer the badge of privileged wit but the brand imposed by an indignant satirist.

## CHAPTER VI.

### THE SHIP OF FOOLS.

*Stultorum infinitus est numerus.* These famous words sum up as well as any others the fundamental axiom of all satire, to which every generation of satirists has given expression in every variety of accent, and phrase. That the world is a kingdom of Fools is a conviction easily detected beneath the fine urbanities of Renan, the glittering irony of Pope. Uttered with more downright and brutal emphasis it is the commonplace in which the decaying Middle Age invested its whole capital of intellectual and moral scorn. The commonplace was piquant however, and the extraordinary variety of expression and metaphor with which it was seasoned never permitted it to pall. The whole range of mediaeval institutions, the church, the court, the civic gild, the monastic fraternity, were imported into the kingdom of Fools; the animal world swelled its numbers with 'asses' and 'cuckoos,' 'apes' and 'hares'<sup>1</sup>; pagan mythology provided Venus and Bacchus for its divinities<sup>2</sup>; Seneca and Solomon, Horace and Juvenal

INTRO-  
DUCTION.

<sup>1</sup> Cf. Zarncke, *Narrenschiff*, p. xlvii.; Wackernagel, *KZ. Schriften*, III. 211; and Murner's *Gauchmatt*.

<sup>2</sup> Cf. Lydgate, *The Order of Fools*, ad init. Venus also presides over Murner's 'Geuche.'

furnished a store of instances, and the treasury of vernacular proverb-lore an inexhaustible supply of illustration. The most intrinsically original of all these metaphors and fancies was due to Germany, and it served as framework to what was long considered the masterpiece of German satire, the *Ship of Fools*.

Writing in the last years of the fifteenth century, and himself a loyal though somewhat backward pupil of the Humanists, Brandt may be said to have given mediaeval Fool-literature its last and crowning work. But if he closed an epoch, he also initiated one. The *Narrenschiff* enjoyed the rare good fortune of winning equal popularity in the world of scholars and in that of men who run as they read. Translated into Latin elegiacs by his disciple Locher, it became one of the classics of Humanism; it supplied More with the point of an epigram<sup>1</sup>, and Erasmus with the conception of his own no doubt infinitely superior *Praise of Folly*.

And it also gave a fresh stimulus and in some degree a fresh form to vernacular satire both at home and abroad. In England especially a long series of writings, from Barclay and Skelton at the beginning of the century to Tarlton at its close, betrayed the direct influence of a book which held its ground here even more persistently than in Germany, and in spite of an incomparably more formidable competition. With all its shortcomings it did us great service. It helped to bridge

<sup>1</sup> One of those against Germanus Brixius. I do not know that it has been noticed before in this connexion :

*In chordigeram navem et Antimorum sylvam.*

Brixius en Germanus habet sylvamque ratemque,

Dives opum terra, dives opum pelago;

Utraque vis illi quid praestat scire? *vehuntur*

*In rate stultitiae, sylvam habitant furiae.*

over the difficult transition from the literature of personified abstractions to that which deals with social types. It helped to substitute study of actual men and women at first hand for the mere accumulation of conventional traits about an abstract substantive; to turn allegory into narrative, moralities into dramas, and, in a narrower field, to prepare the way for the Character-sketches of the seventeenth century, for the revivers of Chaucer and the imitators of Theophrastus, for Overbury and Hall and Earle<sup>1</sup>.

In England however as elsewhere Brandt had predecessors, whose influence only in part coincided with his and has to be carefully distinguished from it. This distinction falls chiefly upon two Englishmen, the brilliant author of the *Speculum Stultorum*, and the poet who embodied his morose ethics in the *Order of Fools*. Both differ from Brandt in starting with the notion of a religious fraternity. The foundation of the 'Ass's Order,' it will be remembered, is one of the most telling episodes of the *Speculum*. After a chequered career of adventure at the university of Paris and elsewhere, the Ass, Brunellus, thinks of retiring from the world. He weighs the merits of the various religious orders in succession. Finding none perfectly satisfactory, he conceives the idea of founding a new Order which should combine the good points of all the rest; in which, for instance, he might enjoy horse exercise, like the Templars, share the liberal diet of the Dominicans,

*Fool-literature in England before 'The Ship of Fools.'*

N. Wiker:  
*Speculum Stultorum.*

<sup>1</sup> Prof. Ward has already expressed this view in a very full article on Barclay in the *Dictionary of National Biography*: 'The English Ship of Fools exercised an important direct influence upon our literature, pre-eminently helping to bury mediaeval allegory in the grave which had long yawned before it, and to direct English authorship into the drama, essay and novel of character.'

the 'one Mass a month' of the Franciscans, the conversational freedom of the Grandimontenses, and, finally, borrow the privilege of that divinely founded Order of which Adam and Eve were the first members, and have a wife<sup>1</sup>.

Lydgate:  
'Order of  
Fools'.

Wireker was a precentor of Canterbury under King John<sup>2</sup>. The Ass's Order dates therefore at latest from the outset of the thirteenth century. Two and a half centuries later the 'Order of Fools' is already a commonplace of satire. It was in a certain sense carried into practice by the Gild of the 'Enfants sans souci,' whose *Soties* frequently, as in the *Roy des Sotz*, represented a Fool-society modelled upon the gild itself<sup>3</sup>. And Lydgate, in the score of octave stanzas which go by this name, has given us the best means of learning what a devout Englishman of his day understood by Folly. His treatment is wholly different from Wireker's. The religious order which Brunellus founded with so much ceremony, has become a faded phrase to Lydgate, and he barely enlarges on the allusion conveyed by his title. Wireker sets forth conditions and privileges: Lydgate does little more than drily enumerate the members, and the inherent irony of his plan is dispelled at every moment by an unseasonable earnestness. The description of the 'sixty-three' Fools is quite without dramatic life. Though written within two generations of Chaucer's great *Prologue*, it is a mere catalogue

<sup>1</sup> *Speculum Stultorum*, sig. e.v. 'Novus ordo brunelli.'

<sup>2</sup> Bale, *sub nom.* Cf. the valuable disputation held (in indifferent Latin before the celebrated Thomasius by Immanuel Weber,—*De N. Wirekero*, Lips. 1672; the only detailed discussion of Wireker that I know.

<sup>3</sup> *Ancien Théâtre Français*, II. Cf. Mr Saintsbury's *Short History*, p. 123.

of isolated traits nowhere elaborated into a portrait, a sort of index of dangerous persons, as it were, calculated for practical utility rather than for aesthetic delight.

The *Narrenschiff* bears the closest resemblance to the 'Narrenschiff.' Lydgate's poem in plan. In both, a long series of vicious characters are collected and described under the rubric Fool. But the *Ship of Fools* would assuredly never have become the enormously popular book it was, had it been a mere summary of different kinds of 'Folly,' or even an analysis of the characteristics of various 'Fools.' In conception at least it was more. It was a series of vivid portraits, nay it was even a rudimentary drama in which a succession of Fools, the crew of a Ship bound on a mysterious voyage, appeared in person, and delivered each one his characteristic and self-portraying speech. The idea is no doubt very imperfectly carried out<sup>1</sup>, but it is emphasised at the outset, and the impression lasts. We are continually reminded, even by the slightest touches, of the dramatic suppositions of the work; the Fools are charged or exhorted, sorrowfully chidden, or sternly threatened, peremptorily summoned and rallied. And this somewhat hesitating and precarious dramatic life is powerfully enforced by the invariably vivid woodcuts. When the description is most formal and abstract, or loses itself in parallels and 'examples,' the auxiliary art silently secures that the poet shall not be talked out by the moralist.

The advantage which Brandt thus gained over

<sup>1</sup> Cf. for example the chapters where the Fools speak in their own persons: thus the idle accumulator of books (ch. i): 'Den vordantz hat man mir gelan' &c., and the 'old' Fool (ch. 5), 'Myn narrheyt loszt mich nit sin grys.' So ch. 78.

Lydgate was however in but a small degree due to Brandt himself. The ideas which he combined,—the woodcuts, the procession or series of Fools, and the Ship,—had all been familiar in German satire, though they had never been associated in exactly the same way. Figures of Fools with mottoes were a current form of Flying Sheet, and had already been used as illustrations in Vindler's *Blume der Tugend*<sup>1</sup>. The young and vigorous Carneval drama had turned to account the comic capacities of the Fool, and nowhere, except at Nürnberg, was it more actively cultivated than precisely at Basel, where the *Narrenschiff* was written. And the Ship of bad characters, for ages a popular jest in Germany, had been recently worked out in a *milieu* with which he also stood in close connexion, and with an effective touch to which he hardly made pretence.

1.  
*Fastnacht-  
spiele.*

Nowhere, in fact, in the early drama of Europe, did the mediaeval taste for groups of parallel figures, of which the Order of Fools was only one example, play so large a part as in the German Fastnachtspiele. There are traces of it no doubt elsewhere, and it was certainly a conception of dramatic form which all the instincts of mediaeval art tended to suggest and to confirm. Elsewhere however it either ruled only as a passing phase, the defects of which were rapidly perceived and overcome, or else it was from the first so skilfully handled that they were not felt. The English Morality was too inartificial to deal more than occasionally (as in the *Four Elements*) with this somewhat elaborate kind of artifice; and its favourite theme—a struggle between good and evil powers for the human soul—tended to merge all finer grouping in a single absolute antithesis. The French Morality, on the other hand, and still more, the

<sup>1</sup> *Allg. D. B.*: 'Brandt,' p. 257; Zarncke, p. xlvii.

*Farce* and the *Sotie*, was too lively to offer very salient examples of a device which inevitably tends to sameness, and the few which it does offer betray more anxiety to overpower this tendency than to emphasise it. The 'five senses of man,' for instance, are brought on the stage; three Fools court the *folle Bobance*<sup>1</sup>; or the *Roy des Sotz* gathers his five subjects about him<sup>2</sup>, but the rapid movement and the inexhaustible variety of combination easily carry off the repetition. In Germany, on the contrary, the device of parallelism found extraordinary favour; and among the Carneval-playwrights of Nürnberg it became almost a stock principle of construction, like the double plot of our Jacobean, applicable to any kind of subject, and always to be relied on for dramatic effect. It flattered the taste for mechanical symmetry of form which has repeatedly haunted German literature, and which has frequently been exorcised only by help of a blind revolt against all form whatever. A number of characters deliver successive speeches, each more or less artlessly setting forth his own peculiarities. Frequently this is combined with the legal form of a trial or a consultation. A youth comes into a law-court requesting the court's opinion upon the proper age for marriage. The judge appeals to the doctors of law in attendance; and their judgments, delivered in succession, constitute the play<sup>3</sup>. Another youth, desiring information upon the seven liberal arts, applies in turn to the 'seven masters'—Aristotle, Euclid, Boethius, Ptolemy &c., who one and all promptly satisfy his curiosity, in spite of his frank avowal that his interest in learning is strictly measured by its

<sup>1</sup> *Ancien Théâtre Français*, II. 265 ff.

<sup>2</sup> *Ib.* 223, ff.

<sup>3</sup> Keller, *Fastnachtspiele des 15ten Jahrhunderts*, No. 41: *der Jüngling der ain Weip nemen wil.*

utility in courtship<sup>1</sup>. Still oftener the action is modelled on a regular trial; and the parallelism is furnished by a successive examination of witnesses, prisoners, or claimants. A number of suitors urge their rival claims to a reward, or strive to clear themselves from a disgrace<sup>2</sup>. In *Die sieben varb*, in the same way, the seven colours plead for supremacy before 'Frau Sunnreich,' who gives the palm to brown, as 'the bond of love'<sup>3</sup>.

Unexciting discussions such as this however occupied little space beside those which gave play to the pungent satire which was the genius of the *Fastnachtspiel*; and to such an object the competition or examination of a group of similar characters lent itself with the utmost ease; the competitors or claimants were made ridiculous by the prize they sought or by the story they told; the string of pleading suitors became, in short, a row of 'Fools.' Thus in several plays, ten or more *liebe N  rrlein* are made to compete in the manner of *Heywood's Four P's*, for the honour of being the 'greatest fool,' and recount their several adventures in love, in order to prove it<sup>4</sup>. Or again, thirteen 'Fools of love' are 'examined' by Venus. They recount their adventures in turn; but the sentence falls equally upon all:

Seit ir durch weiber sein toren worden,  
So bleibt auch in dem selben orden<sup>5</sup>.

<sup>1</sup> No. 96: *die sieben meister*.

<sup>2</sup> No. 12.

<sup>3</sup> *Ib.* No. 103.

<sup>4</sup> No. 14.

<sup>5</sup> No. 32: *Ein Spil von Narren*. Cf. No. 38, 'Ein FNSp. von denen die sich die weiber nerren lassen' (*nine* fools, called 'der erst narr,' der 'ander thor,' 'der dritt esel,' &c.). Also, No. 13, where *twelve* fools of love in the same way tell their experiences.

Such processions of Fools were no doubt essentially different from Brandt's; the Fools are all of a single type; there is no suggestion of the Brandtian thought that all sins are reducible to forms of folly. But there was all the dramatic apparatus for carrying out that thought, suitable by its very simplicity to a poet whose aims in art were very humble, and who was much more anxious to convert the world than to amuse it.

Even more than to the Fastnachtspiele however *The Ship*. Brandt owed the form and the spirit of his satire to the device of the *Ship*. The old satirical fancy of a 'Ship of boon companions' was of purely German invention, and before Brandt, exclusively of German currency. Teichner's *Schif der Flust*, Jacob van Oestvoren's *Blauwe Schute* and Jodocus Gallus' *Monopolium des Lichtschiffes* all had in common, with different shades of emphasis, the representation of a crew of ruined revellers and spendthrifts<sup>1</sup>. In the two latter the irony is heightened by the introduction of an 'order' or gild to which only ruined revellers are admissible, with a formal scheme of privileges and conditions, and a list of members drawn out of all ranks of society, from the alchemist who had melted his fortune in the crucible, to the bishop who had mortgaged his income to buy his title<sup>2</sup>. A satirical device of this kind evidently came of the same stock as the 'Land of Cockayne.' It also reflected a somewhat less genial, a somewhat more resentful and vindictive criticism of the riotous living at which it was aimed.

<sup>1</sup> 'All die von grôzem gut Choemen un̄ vieln in armut' (*Sch. d. F.*); 'allen ghesellen van wilde manieren' (*B. Sch.*), 'qui, cum prius essent multarum divitiarum...onere gravati, dispensante cum eis ebrietate...sunt de gratia Dei ab eisdem...hodie levificati' (*Monop. d. L.*). All three are printed at length in Zarncke, p. lxi. ff.

<sup>2</sup> *Monopol. des Lichtschiffes*, Zarncke, p. lxi.

Cockayne was a *bonâ fide* paradise of the improvident, in which the one condition of prosperity was to take no thought. But the Ship was a paradise only in the imagination of its crew. They crowd eagerly on board, and sail gaily away, but their destination is not what they anticipate. The worn-out spendthrifts of Teichner's *Ship of Ruin* are bound for the havens of 'Emptymouth' and 'Hollowcheek' in the land of spare living<sup>1</sup>. Those of Jodocus Gallus' *Lichtschiff* decree that the dullest on board shall stand at the helm, and that no one shall take any thought of danger. They show the easy temper of Cockayne exactly where this can be done with least impunity—in a ship at sea. And Brandt expressed this pointedly by calling his ship of 'good fellows' the Ship of Cockayne<sup>2</sup>. Their voyage is accordingly as full of perils as that of Odysseus, on which it is with some felicity modelled. They put out merrily from 'Narbonne' with 'Narragonia,' their final port, inscribed on their pennon. They wander helplessly along the seas, searching every port and every shore, but vainly, for none knows where to land; dreaming of an Eldorado but heedless of compass and chart; half crushed in the Symplegades, barely escaping Scylla and Charybdis; some lulled by the Sirens to fatal sleep, others swallowed by the Cyclops, and many more entertained by the cannibal Laestrygones who

sunst anders essen nüt  
Dann narren fleisch zu aller zyt  
Und drincken blut für irn wyn.

At length, broken by the waves, borne astray by the wind, despoiled of its crew and bereft of all help and

<sup>1</sup> *Schif der Flust*, vv. 6, 25 etc.

<sup>2</sup> *Narrenschiff*, chap. 108.

counsel, the Ship of Misfortune is swallowed up in a whirlpool.

The 'Ship of Cockayne' is thus the direct equivalent of the 'Ships of Ruin,' which preceded it, and Brandt in so far merely added one more to the mediaeval satires upon prodigal riot. His plan however was far more comprehensive than this. Prodigal riot was but one among the hundred and odd types of human infirmity which he gathered under the head of Folly, and to which he extended in a strangely loose fashion the image of the Ship. It was to this, rather than to its confused and feebly executed imagery, that the *Ship of Fools* owed its lasting influence, if not exactly its immediate attraction, above all in England, where, as I have said, it was destined to become one of the main starting-points of modern satirical portraiture. It is necessary therefore to examine its contents somewhat more closely.

Without any pretence of philosophic nicety, we may distinguish six different notions which Brandt at various times attaches to his cardinal term Folly, and under one or other of which all his Fools may be grouped. Some of them have always been recognised as marks of Folly; others reflect the curious idiosyncrasy of Brandt's age, and of Brandt himself. The inclusion of a large number of more or less criminal offences, for instance, is perhaps the most original feature in an ethical system which for the modern mind is full of originalities. We have offences against religion,—blasphemy<sup>2</sup>, 'contempt for God<sup>3</sup>,' or for another life<sup>4</sup>, desecration of festivals<sup>5</sup>;

*Classification of Brandt's Fools.*

I.

*Vicious or criminal offences<sup>1</sup>.*

<sup>1</sup> This term fairly expresses the judgment of Brandt's age upon the faults mentioned below, some of which we should regard more leniently.

<sup>2</sup> Cap. 28.

<sup>3</sup> Capp. 86, 87.

<sup>4</sup> Cap. 43.

<sup>5</sup> Cap. 95.

offences against the law and common morality,—oppression<sup>1</sup>, crafty dealing of various kinds, forging<sup>2</sup> and appropriation<sup>3</sup>, dishonest borrowing<sup>4</sup> and extortionate usury<sup>5</sup>, slanderous falsehoods<sup>6</sup> and hollow flattery<sup>7</sup>, with lust<sup>8</sup> and adultery<sup>9</sup>. All these are actions by which society suffers, while the offender may in a certain sense gain. They are consistent at any rate with a considerable share of the worldly happiness of which 'Folly' is commonly thought to involve the loss.

2.  
*Insolence.*

The second class of Fools are also unpleasant to their neighbours rather than conspicuously or directly injurious to themselves; the insolent and quarrelsome people, who take offence at the slightest provocation<sup>10</sup> or correction<sup>11</sup>, and carry every petty squabble into the law-courts<sup>12</sup>; or wantonly injure, and sneak away to avoid the consequences<sup>13</sup>; petty tyrants like the civic officials<sup>14</sup>, rough oppressors like the knights<sup>15</sup>, insolent upstarts like the peasants<sup>16</sup>.

3.  
*Riot.*

The third class are also far from innocuous to society, but they do themselves still worse harm. Among the forms of Riot the sober and peaceable lawyer of Basel sternly condemned every kind of dissipation and the slightest breach of orderly social observance;—dancing<sup>17</sup>, and gambling<sup>18</sup>, heavy eating and drinking<sup>19</sup>, disturbances and bad language in the streets<sup>20</sup>, or in church<sup>21</sup>, or at table<sup>22</sup>, and above all on the occasion

<sup>22</sup> Cap. 110 a.

most notorious for both,—the Shrove-tide festivities<sup>1</sup>; wantonness of idle students<sup>2</sup> and workmen<sup>3</sup>, butlers and cooks<sup>4</sup>. And with these may be classed those who indulge in even innocent forms of the superfluity which to Brandt's ascetic temper seemed itself a sin;—superfluity of wealth<sup>5</sup>, of talk<sup>6</sup>, of books<sup>7</sup>, of benefices<sup>8</sup>; outlay of precious hours in the saddle<sup>9</sup>, or with the gun<sup>10</sup>.

The fourth class, like the third, is closely connected with the Folly of Cockayne; but their fault is one of neglect rather than of commission. People who neglect their children<sup>11</sup>, or do not provide for old age<sup>12</sup>, or for death<sup>13</sup>, or for the accidental mischances which to men of Brandt's cautious temperament appear to be always impending<sup>14</sup>; or again, the merely lazy and indolent, the maid who slumbers at her wheel and the man who loiters at the mill<sup>15</sup>. But neglect of duty was a relatively small offence in Brandt's view if it merely ended in inaction. It was at least consistent with being quiet and sober and thinking of oneself no higher than one ought to think, virtues on which he is never weary of insisting. The Fools, on the contrary, who incur his most vehement and persistent criticism, to whom he returns again and again, and who, if any, may be said to touch the very heart of his satire, are those who neglect their own duty to meddle with another's, the officious Atlases, represented in one of his woodcuts, who try to put the world on their own shoulders<sup>16</sup>, the Fools of *presumption*.

4.

5.  
Presump-  
tion.

Brandt's fertility of illustration on this head is infinite. His ethics are not drawn from the Gospel, for they are without a suggestion of altruism; but the Gospel itself did not urge a more unqualified abasement of pretensions, a more complete 'lowliness of spirit.' He has nothing but scorn for heroic rashness. The 'unhappy Faun' who strove with Apollo, and was flayed for it, is his chosen type for those who attempt what is too hard for them<sup>1</sup>. And commoner sorts of pretension are denounced with what reads like the tirade of an egoist, but is really only a severe application of the practical maxim that, for society's sake, men must attend to themselves first. To ignore the mass of men is the beginning of wisdom. 'He is a wise man who knows his own business, and no man else's.' 'Whoever would satisfy all the wants of mankind must indeed rise early.' 'It takes a great store of meal to stop everybody's mouth.' 'He is a fool who runs to put out another man's house when his own is burning, or who pushes another's boat on with a loss of speed to his own<sup>2</sup>.' 'The father who gives his children bread when he is starving should be flogged to death<sup>3</sup>.' And an attack upon the monks for seeking their own salvation at the expense of the world from which they withdraw, is answered by the plea that every one must think of his own soul first. 'If I had *two* souls, I would gladly give one for my fellows.' Another remarkable chapter is devoted to the fashionable Fools who travel and return no wiser than they went, according to the domestic-minded proverb, approvingly quoted by Brandt, which declares that 'a goose flies away and a gander flies

<sup>1</sup> Cap. 67.

<sup>2</sup> Cap. 58.

<sup>3</sup> Cap. 90. 1 ff. This was a current proverb; cf. Zarncke, *ad loc.*

back,' and the students who thronged the universities of Paris and Bologna; a cry heartily echoed by Barclay, as afterwards in more classical prose by Ascham. The possibility of getting wisdom by travel Brandt did not indeed wholly deny, but it was mainly confined to wise pagans like Ulysses and Pythagoras; and a more sincere homage is paid to the still wiser pagan who never left his native Athens. Brandt lays bare the kernel of his moral nature in the suspicion that 'he who wanders cannot perfectly serve God.' At other times he dwells rather on the perils of travel than on its futility. A wise man should stay at home, or if he find himself by chance at sea, make for the shore as swiftly as possible. The Eldorado is far off, and you are more likely to be drowned than to reach it. Such was the view of a Basel doctor just two years after the discovery of America. Less amiable kinds of presumption are touched with hardly more severity, such as frivolous ambitions<sup>1</sup>, worldly marriages<sup>2</sup>, or meddlesome quarrel-making<sup>3</sup>. And then comes a whole series of chapters devoted to assailing the common psychological ground of this class of Folly,—idle confidence in one's own powers<sup>4</sup>, or virtuousness<sup>5</sup>, or good fortune<sup>6</sup>, or in God's mercy<sup>7</sup>, or in the speedy death of one's rich relatives<sup>8</sup>.

Lastly, we have the class of mere simpletons whose title to belong to the order of Fools has always been recognised: the people who 'cut themselves with their own knife'—are trampled on, as Brandt says, by the ass<sup>9</sup>, who disobey their doctor<sup>10</sup> or make foolish exchanges<sup>11</sup>, or who are fatuously credulous<sup>12</sup> or fatuously

6.

*Perversity.*<sup>1</sup> Cap. 92.<sup>2</sup> Cap. 52.<sup>3</sup> Cap. 7.<sup>4</sup> Cap. 60.<sup>5</sup> Cap. 36.<sup>6</sup> Cap. 37.<sup>7</sup> Cap. 14.<sup>8</sup> Cap. 94.<sup>9</sup> Cap. 78.<sup>10</sup> Cap. 38.<sup>11</sup> Cap. 89.<sup>12</sup> Cap. 41.

communicative<sup>1</sup>, or generally weak and unstable in character, incapable of breaking a bad habit<sup>2</sup> or keeping a good resolution<sup>3</sup>.

*Summary.* Such is a general view of what Brandt included in his gallery of Fools. Compared with other attempts of the same kind it is extraordinarily comprehensive, and also singularly German. It is a picture of the infirmities of German society in the year 1494. Eccentric as at certain points it may seem, it is in its main lines in perfect harmony with fifteenth century ethics and nomenclature. Lydgate, for instance, views folly from a scarcely less catholic standpoint, and his sixty-three Fools are recruited from every class of Brandt's five score. Thus the 'insolent' Fools are represented by him 'that is cursed and hathe therof deynté' and him 'that bostith of his cursidness' (st. 13, 11); the 'riotous' by the 'night motoner' (st. 15) and the 'night rowner' (st. 21)<sup>4</sup>, the 'self-neglectful' by 'him that castithe away his cloke in showris,' sleeps when the fox is in his fold (st. 19), drinks beer when he might drink wine (st. 16)<sup>5</sup>; the 'presumptuous' by 'the lusti galaunt that weddithe an old wiche' (st. 15), or 'sekithe warre and hathe hjmself no myght' (st. 9). On the other hand, the proportionate emphasis laid upon these

<sup>1</sup> Cap. 39; 101.

<sup>2</sup> Cap. 5.

<sup>3</sup> Cap. 84; cf. 96.

<sup>4</sup> That this was a perfectly natural use of the term Fool (it is scarcely so to us) is also shown by the interesting *Sermon joyeux des Foulx* (Viollot-le-Duc II 207 ff.) where one of the four classes of fools is that which 'per plateas nocturno tempore currit.' (ib. p. 213).

<sup>5</sup> This very English conception of Folly is the main point of *Jyl of Brentford's Testament*, a century later; it also appears to survive in the old Highgate ceremony of 'swearing on the horns,' the oath consisting in a promise 'not to drink small beer when one could drink strong,' &c.

classes is very different. Brandt has his own country in view, and he gives enormous space to the riotous sensuality for which Germany was then and long afterwards a bye-word, while he has little to say of the subtle duplicities of which, as the patriots of the next generation exultingly boasted, the guileless Teuton had never been accused<sup>1</sup>. It is precisely this vice however, upon which the main weight of Lydgate's indignation falls. The deceitful fool, we are told, is the most heinous of all, who

may hoppe on the ryng,  
Foote al afor and lede of right the daunce:  
He that al yevithe and kepythe himself nothyng<sup>2</sup>,  
A double hert with fayre feyned countenaunce,  
And a pretence face trouble in his daliaunse,  
Tunge spreynt with sugre, the galle kept secret,  
A perilous mowthe is worse than spere or launce,  
Thoughe they be cherished, God lete them never the<sup>3</sup>.

The note thus struck almost at the outset is recurred to throughout the series. We hear of fools 'with two faces in one hood (st. 2)', simulating (st. 5), 'flattering and faining' (st. 10), 'promise-breaking' (st. 11), and faith-violating fools (st. 12). On the other hand, Lydgate is in various ways less complete. The sexual offences on which Brandt repeatedly dwells, have no place in his list<sup>4</sup>. The horror of presumption, of superfluity,

<sup>1</sup> Hutten: *Inspicientes*.

<sup>2</sup> Lydgate and Brandt thus each describe the same trait under their favourite rubrics.

<sup>3</sup> I quote from the Harleian text printed by Halliwell for the Percy society. A slightly different one is in EETS, Extra Ser. No. 8.

<sup>4</sup> Brandt's inclusion of them may probably be explained by the associations of the term *Gauch*, which was both an equivalent for *Narr*, and also, in a special sense, as we see from the *Gäuchmatt*, referred to breaches of chastity.

of self-confidence, which colours so much of Brandt's satire, is scarcely perceptible. But what was far more important for the literary influence of Brandt was, as I have already hinted, the profusion of concrete figures, types of classes, of professions, trades, spiritual and secular offices, with which he illustrated what no doubt was primarily a classification by moral qualities. There is nothing in Lydgate like the sections of the *Narrenschiff* on the beggars and vagabonds, on the fraudulent tradesmen, on the apprentices, on the monks, on the peasants, on the idle serving-men, on the courtiers, several of which, like that on the *Grobians* which will be discussed in the next chapter, themselves became independent and fruitful literary starting-points.

And this feature of the book was relatively even more important for England than for Germany. Its concrete and individual pictures of society were there hardly so much relished as the fantastic and humorous imagery of the Fool, in which they were disguised. The *Narr* was the most popular of satiric types<sup>1</sup>. The Aristophanic imagination of the time made a plaything of him, and sportively maltreated him with huge and riotous enjoyment. He was 'conjured' and 'cast,' crowned with the proverbial 'cap,' immersed in the

<sup>1</sup> The motive of the *Ship* on the other hand, remained after the first generation comparatively dormant. Geiler's *Schiff der Busse* and *Schiff der Heil*, with the *Ursulenschifflein*, are purely devout works which recall it merely in their titles. In the field of satire there remain only Gengenbach's *Narrenschiff vom Bundschuch* (on the insurgent peasantry) and perhaps Sachs' *Der vollen Säw gefehrliche Schiffart* (Zarncke, p. lxxii.). In England also, as we shall see, and in France, the *Ship* had only a transient success. Badius Ascensius' characteristic adaptation to the other sex in the *Nef des Folles* rapidly followed the original. Symphorien Champier's *Nef des Princes*, though wholly unlike in motive, perhaps owed its form to this source.

proverbial 'bath,' 'swallowed' by one enemy, extracted from the labouring intestines of another<sup>1</sup>. The wild humour of *Narrenschneiden* was, however, not wholly congenial to the somewhat realistic genius of English satire; and, in spite of Lydgate's precedent, the Fool in Brandt's sense remained practically locked up in the pages of his translator. No other catholic and universal satirist formed himself upon his model; and the crew of Fools begot for the most part only crews of knaves, beggars, courtiers, and court-jesters,—separate detachments of the *innumerabilis numerus stultorum*, which the private experience of each writer, rather than his moral judgment, led him to single out for special chastisement. What they lost in breadth however, Brandt's English successors gained in distinctness, in vigorous and vivid realism, in fulness of detail. If they were worse moralists they were better artists, and if they borrowed but fragments of his large and dignified ethics, they can fairly claim to have brought his fragments of art, his broken and confused hints of imagination, into roundness and completion.

## I

Nowhere is this contrast more striking than in the first of these productions<sup>2</sup>, the remarkable fragment

KNAVES.  
*Cock*  
*Lorell's*  
*Bote.*

<sup>1</sup> Cf. the *Narrenbeschwörung*, *Narrenkies sen*, *Narrenkappen*, *Narrenbad*, *Narrenfresser*, and Murner's *Lutherischer Narr*, of all of which, except the last, extracts are given by Zarncke.

<sup>2</sup> I do not propose here to speak of Barclay's translation, though much might be said of its innumerable variations upon the original. On Barclay see, besides Prof. Ward's article in the Dictionary, to which I have already referred, a pamphlet by J. Seyffert: '*Alexander Barclay's Ship of Fools*,' which contains many suggestive re-

known as *Cock Lorell's Bote*<sup>1</sup>. Whoever the author may have been, we owe him not merely a piece of writing of high antiquarian and philological interest, but one of the most vivid pictures we possess of vagrant life, comparable with 'Robin Hood' and the 'Jolly Beggars,' and the delightful beggar-scenes in Frischlin's *Frau Wendelgard*, and in contemporary literature paralleled only by a poem which it doubtless contributed to produce, the *Hye Way to the Spittel House*. It is certainly not without many marks of a seriousness as genuine as Brandt's, though less bitter; but this is broken by flashes of half suppressed

marks. Seyffert however makes us a present of some unsuspected facts when he not only takes Barclay to Basel but actually introduces him, it is true with a *vermuthlich*, into 'the circle of scholars there, of which Johannes a Lapide was the centre' (p. 1). This is however only a natural enlargement upon Jamieson, who assumes the continental journey, for which there is no evidence at all, as a matter of fact, naïvely grounding it upon Barclay's account of the continental towns which were the favourite resort of *Fools*.

<sup>1</sup> *Cock Lorell's Bote*. London, n. d., but about 1510. In col: Wynkyn de Worde. The best edition is that of Rimbault for the Percy Society. The editor's list of early allusions to the poem omits, however, the earliest of all, that in the *Hye Way to the Spittel House*, v. 1058 ff. He refers, but only in a general way, to the influence of the *Narrenschiff*.—All the five woodcuts in the *Cock Lorell's Bote* are free imitations of originals in the *Ship of Fools*. None stand in very obvious relation to the text. That at B ii., (a Fool, with outstretched tongue, standing before a tree up which a magpie is ascending to her nest) is from the chapter *Of to much speaking or babbling*. That at B iii., (the hunter whose dogs are divided between the attractions of two hares running in opposite directions) is taken from the illustration to the chapter *Of him that together would serve two masters*. Those at B v. and C ii. are identical, and are freely adapted from the *Universall Ship* (*Schluraffenschiff*). That on C iii. (four Fools playing cards round a table) is also freely adapted from the chapter on *Card players and dysers*.

sympathy with the wild outlaw life. Something of the atmosphere of the greenwood is transferred to the scenery through which the 'Bote' makes its endless voyage; and Cock Lorell is hardly more the chief of a Ship of Fools than a naval Robin Hood among his merry men<sup>1</sup>.

The fragment opens abruptly with what is evidently a description of the crew. Knavish tradesmen of every craft are crowding to the Bote at the summons of Cock Lorell, the 'corryer' whose ill-dressed hides 'wolde drynke water in fayr wether'; the shoemaker and cobbler struggling for a piece of leather, which they end in tearing to pieces; the butcher 'all begored in red blode, His hosen greasy upon his thyes,...He had as moche pyte as a dogge.' At this point appears, with an abruptness which the lost opening pages would probably have explained, a pardoner, bringing the muster-roll of what is now seen to be a 'religious fraternity' of knaves, and a list of the privileges which the pope is pleased to grant them, both of which he reads :

The pope Darlaye hath graunted in his byll  
That every brother may do what he wyll.....  
Also Pope Nycoll graunteth you all in this texte  
The coughe and the colicke the goute and the flyxe,  
With the holsome tooth-ache.

He adds the equally equivocal grant of land for a chapel, in the most notorious part of Southwark Bankside. This is followed by a long enumeration of the names of the crafts represented,—a store-house of the trade-nomenclature of the early sixteenth century;—'Cock Lorell cast asyde his hede, And sawe the stretes all over sprede,

<sup>1</sup> The Robin Hood cycle was still in vigorous growth, and had yet to receive some of its most notable elements, such as Friar Tuck. Cf. the excellent dissertation of H. Fricke: *Die Robin-Hood Balladen* (1883).

That to his bote wolde come, Of all craftes there were one or other.' Each has his office in the ship, his particular rope to haul &c.

Then follows the spirited account of the voyage:—Cock Lorell blows his whistle, the crew set up the rowers' cry and smartly strike the water,—'men might here the ores classhe,'—and gaily spread the sail; away they go, singing merry ballads and blowing trumpets 'for joy'; pulling to shore now and again to dance 'with all their might,'... 'sweryinge and starynge heven hye,' or drinking about St Julian's tonne<sup>1</sup>,—'they would not have vertu ne yet devocyon, But ryot and revell with joly rebellyon,'—until the sun goes down, and 'pale Lucina' rises with 'her silver streemes' that make the world as light as if it 'had be paved with whyte.' And then they set off again, up hill and down hill, to traverse England through and through, 'vyllage towne cyte and borowe,' 'from Garlic-head to knaves' in;' the poet watches the departing ship till he can see it no more, and then turns sadly homeward. On his way he meets a rout of monks and nuns, all eager to join Cock Lorell; and anxiously inquiring where he is to be found,—*δεόμενοι ἐς κόρακας ἐλθεῖν, καὶ παρεσκευασμένοι*, but unfortunately, like Euelpides and Peisthetairos *ἔπειτα μὴ ἔξυρεῖν δυνάμενοι τὴν ὁδόν*,—bent on 'going to the dogs' but unable to discover where 'the dogs' are. And he reckons the whole following of the Bote at 'the thyrd persone of Englande,'—a modest figure which Brandt's more pessimist arithmetic would hardly have ratified.

It will be obvious from this sketch that the poem was the result of a not entirely successful attempt to fuse two conflicting though kindred motives; the travesty of a

<sup>1</sup> *Torne* in the original, a misprint, as the rhyme shows, but reproduced without comment by the editors.

religious order and the Ship of Fools. Most of the first part is only a new variety of the Order of Knaves. The pardoner's roll-call of the members of 'this fraternite,' his announcement of special indulgences, and of the grant of land for the chapel<sup>1</sup>, place Cock Lorell in the company of the Markolfs and Brunellus', the founders of new Orders. Tradition too dwelt almost exclusively upon this aspect of him. For a century afterwards he was, if not the 'founder,' the 'confirmer' of the 'Twenty five Orders' of knaves<sup>2</sup>. But the constitution of the crew, their 'offices' and above all the voyage, are obviously drawn from the *Ship of Fools*, and from Barclay's version of it. The members of the 'fraternity' are approximately what Brandt called 'Craftsmen-fools,'—they are the rogues of the whole commercial and artizan world, gathered out of every craft and calling<sup>3</sup>. The opening lines of Brandt's *Gesellschiff* (cap. 48) contained the germ of this:

Eyn gsellen schiff fert yetz do här,  
Das ist von hantwercks lüten schwär  
Von allen gwerben und hantyeren, &c.

<sup>1</sup> Cf. in Lydgate's *Order of Fools*, the similar allusion to a papal grant: 'Nullatenses ensealed hathe his bulle To all suche, that none of hem shall the.'

<sup>2</sup> So e.g. Awdeley, on his title-page, to which I shall return. It is hardly worth while inquiring whether 'Order' in this phrase has the same meaning as in the 'Order of Fools' (Lydgate), which, though it has 63 members, is itself single. It seems likely that the word, originally used with a distinct reference to the Monastic orders, afterwards resumed its etymological sense of 'rank'; so that the '25 orders of knaves' would mean so many 'rows' or subdivisions of them. Cf. the title of the *Tincker of Turvey* (1630).....'with the Eight Several Orders of Cuckolds marching here likewise in their horned Ranks.'

<sup>3</sup> 'Of every craft some there was,  
Shorte or longe, more or lasse.' p. II.

The vast majority are true crafts, and the names show the great

careless and hasty workmen, as he proceeds to tell us, journeymen who fancy themselves masters, 'tailors who take long stitches,' 'masons who leave large joints,' 'carpenters who make much sawdust' and the like. And Barclay had given the satire a somewhat keener point by turning the slipshod workers into downright scamps:—

Some make theyr ware unjust and disceyvable...  
 Such as coveyt the byers to begyle  
 With flaterynge wordes fals and dysceyvable,...  
 And all other...  
 Whiche make theyr warke not true and profitable  
 But counterfayte and pleasaunt to the iye  
 And nought in profe, men to abuse therby.

*The  
 Voyage.*

The crew of the 'Bote' are then essentially Brandt's 'Gesellen.' But when we come to the voyage and its adventures, the history of the Gesellen ceases to offer a parallel, Brandt having, as usual, very speedily acquitted himself of the imaginative part of his work. Once however, and only once, he had ventured upon a genuine and detailed account of a voyage,—the voyage of the 'good fellows' to Narragonia or Cockayne; and it is this voyage of the *Schluraffenschiff*, not that of the *Gesellenschiff*, from which the idea of Cock Lorell's is immediately derived. The *Bote* is therefore a fusion of the two chapters. Such a fusion had been much facilitated by the translators. Locher had brought these originally remote passages (capp. 48 and 108 in the original) together at the end of the book<sup>1</sup>, and had also given specialisation which English trades had attained even at the beginning of the sixteenth century. A few however are only ironically described as crafts, e.g.:

Swerers, and outragious laughers,  
 Surmowers, yll thynkers, and make brasers  
 With lollers, lordaynes, and fagot berers, &c.

<sup>1</sup> In Locher they are separated only by his own *Excusatio*.

them somewhat analogous titles<sup>1</sup>; while Barclay besides following him in this, as was natural, had placed at the head of one chapter in his version a stanza which reads like an introduction to the other, so vividly does it refer to the vices of craftsmen rather than to those of Cockayne.

Here shall Jacke charde, my brother Robyn hyll  
With Myllers and bakers that weyght and mesure hate  
All stelynge taylers: as Soper; and Manshyll  
Receyve theyr rowme.

Most of the dramatic incident is suggested by this chapter as it appears in Barclay, with some hints however from the prologue. The spirited account of the Fools rushing in from all sides to get a place in the ship, (Brandt, *Prol.* v. 20 ff., Barclay, ed. Jamieson, i. 13), has furnished the framework of the first part of *Cock Lorell*, where Cock receives the applicants for admission as they successively appear, and especially the vivid picture on p. 8:

Then Cocke caste a syde his hede,  
And saw the stretes all over sprede<sup>2</sup>  
That to his bote wolde come.

The numbers left behind, who struggle for precedence, or wait vainly on the shore, (Brandt *u.s.*, '*Ein schiff möcht die nit all getragen Die yetz sind in der narrenzal*,' Barclay: They run to our shyp,...we are full lade and yet forsoth I thynke A thousand are behynde whom we may not re-

<sup>1</sup> Locher calls the *Schluraffenschiff* 'Latina navis seu barca socialis,' adding that it is intended for all who have not secured a place elsewhere; the *Gesellenschiff*, 'socialis navis mechanicorum.' So Barclay: 'The universall Shypp and generall Barke or barge wherein they row that yet hath had no charge,' and 'The unyversall Shyp of crafty men or laborers.'

<sup>2</sup> Cf. Brandt's phrase (not in Barclay): 'all strassen, gassen sindt voll narren,' *Prol.* v. 10.

receyve &c.) reappear in the troop of monks and nuns whom the poet meets as he returns,

To mete with Cocke they asked how to do,  
And I tolde them he was a go;  
Than were they sad everychone,  
And went agayne to theyr home<sup>1</sup>.

The voyage itself is lineally derived from that of the Ship of Cockayne, by a process however which wholly changed its character. In Brandt the whole weight of description is thrown upon the disasters and the improvidence of the crew. But his opening lines contained a hint which in the hands of the translators became the nucleus of a new and different narrative. 'We have brethren in all lands,' he says; 'and through all lands we travel, from Narbon to Schluraffen land.' This was a tempting topic for a fluent Latinist, and Locher expands it into some thirty lines, informing us, with a Vergilian profusion of names, of the geographical distribution of Fools among the countries of the world<sup>2</sup>, England holding a conspicuous place. Such an opportunity for edifying his countrymen was naturally not lost upon Barclay, and the single couplet devoted to England is in its turn expanded into four stanzas:—

In Englande is no Cyte, nor shyre towne  
Boroughe ne vyllage howe pore so ever it be  
Nor noble Palays of such a grete renowne

<sup>1</sup> Cf. Brandt's chapter on the idle pursuivant (No. 80, *Narrehte botttschafft*) who finds himself left behind on the strand.

<sup>2</sup> Ex Asia veniunt rutilo sub sole creati  
Stulti: nobiscum qui cita vela trahunt;  
Finibus e Lybiae veniunt...  
Migrant Hesperii: migrat quoque Gallia tota...  
Ad navem veniunt gentes quas ultima Thyle  
Finibus extremis quasque Britannus habet, &c.

*Navis Stultifera*, fol. cxxxiv.

But some maryners sende must they unto me<sup>1</sup>.

Now must we leve eache sympyll haven and porte  
And sayle to that londe where folys abounde and flowe  
For whether we aryve at London or Brystowe  
Or any other Haven within this our londe  
We folys ynowe shall fynde alway at hande.

*The Ship of Fools*, II. 308, 9.

And to increase the divergence, the Odyssean narrative of peril which should follow is turned into a sermon, in which the Cyclops and the Sirens, Scylla and Polyphemus, loom dimly through a mist of moral interpretation. In a word, the Ship of improvident 'good fellows,' destined to be borne through continual misfortunes to final ruin, performs the less tragic rôle of a grand tour through the world, to pick up the Fools who are everywhere eagerly awaiting it, and nowhere more than in the harbours and cities of England.

Finally came the author of the *Bote*, and completed the transformation; for in his hands the voyage is, on the one hand, entirely without misfortune, and on the other, entirely English. He has localised it, and if he has not altered its moral, he has at least successfully obliterated the imagery by which the moral was enforced. A genuine realist, with a keen eye for detail, for local colour, and an extraordinary intimacy with the London life of his time, he had little in common with the clerical poet who prided himself on the elevation of a Muse which would not deign to sing of 'Philip the Sparowe.' He has given us then in a sense impossible to Barclay, a genuinely English ship and a genuinely English voyage, a crew of Londoners, painted with a variety and humour which sufficiently contrasts them with the monstrous

<sup>1</sup> So 1570 edition. The first edition, followed by Jamieson, misprints *unto come*.

features of Brandt's Fools, commanded by a noted English rogue, and traversing England from end to end. —'They sailed Englande thorowe and thorowe, vyllage, towne, cyte and borowe'.<sup>1</sup> And the voyage appears to have no other destination or end. Joyous and heedless as they are, their heedlessness has no unfortunate consequences. They 'blowe their trumpets for joy,' 'sprede their sail as voyd of sorowe,' sing merrily and loud, dance when they will in the deepening twilight, 'with swerying and starying heven-hye'; they even drinke the tonne of the patron saint of thirsty travellers; but no more bitter consequence follows than the unwelcome interruption of their revel by the boatswain's whistle, and then every man takes his oars and they sail gaily off, 'up hill' and 'down-hill,' to gather in the knaves of England; —while the poet wanders away, not in the grim triumph of Brandt and Barclay, but sadly 'to mowe shames tere.'

## II.

COURT-  
IERS.  
Skelton:  
'The  
Bowge of  
Court.'

The author of the *Bote* was an innovator in English poetry. Consciously, or unconsciously, he broke emphatically with the tradition which, since Chaucer and Langland, had practically confined serious verse to the regions of classical or sacred story and moral allegory. His portraits of 'knaves' are certainly not at all comparable in literary refinement with those of Chaucer's pilgrims, but they were equally an attempt to find the material for literature in close observation of real life instead of in allegorical subtleties. This was the more striking

<sup>1</sup> Two of these bear a curious resemblance to Narbonne and Narragonia,—the point of which was only intelligible to one who knew German;—'they sailed from *garlick-head* to *knaves-in*.'

because the scheme of the *Ship of Fools*, which as we have seen, was borrowed in the *Bote*, lent itself with peculiar ease to allegory. Even Brandt, to whom his 'Ship' was hardly more than a telling framework for his collection of apologues, an alluring embroidery, as it were, to catch the popular eye, treats it, at least once, with unmistakeable symbolism. And to a poet already formed in the conventional manner it must have offered material hardly surpassed for suggestiveness.

Such a poet was the great English satirist of the age of the Reformation. The remarkable poem which he called *The Bowge of Court* (court-rations) was probably produced within a dozen years of Barclay's translation of the *Narrenschiff*, for its satire on court-life is pointed by no allusion to the patron of whom he became from about 1522 the bitterest assailant. That he knew and read this translation is certain, in spite of his unfriendly relations with its author.

His *Boke of the Three Foles*, as Dyce long ago pointed out, is merely a paraphrase, with a commentary, of three chapters of it. <sup>1</sup>In manner this little work contains but few touches of the Skeltonian 'pith'; its three prose apologues are conceived in the serious tone of the preacher; quoting examples and drawing morals, appealing and exhorting; and they probably indicate that at least one English parson followed the example of Geiler von Kaisersberg at Strassburg, in founding sermons on the *Ship of Fools*<sup>2</sup>. While Geiler however held up the entire gallery of Brandt's Fools for the warning of

<sup>1</sup> His lost 'Nacyown of Fyls' (*Garl. of Laurell* v. 1470, Bale Cent. sub nom.) was also presumably written under the influence of the Ship.

<sup>2</sup> I know no other indication however that it was ever so used.

his audience, Skelton fastened upon three only,—the Envious, the Voluptuous, and those that wed for wealth. It is not difficult to understand the motive for this choice. Few chapters in the *Narrenschiff* could have better expressed the characteristic bitterness with which Skelton incessantly assails the follies of worldly station and of those who struggle for it. Voluptuousness is for him in a special sense the vice of high rank; it is by taking *Liberte* and *Fansey* into his service that the grandee Magnificence, in the Morality of that name, prepares his own ruin; and in the *Bowge of Court*, Ryot is one of the seven vices that man the ship of good fortune. In the same way Envy was the vice of those who sought high station, and *wedding those old wyddred women, whych have sakes full of nobles*, a means of attaining it hardly preferable to the extortionate devices of the conjurer which he was one day to lay bare in the lost tragedy of the '*Negromansir*.' Thus the little treatise which Skelton presented to the most illustrious contemporary example of worldly greatness, was but a prose anticipation of or comment on the vigorous teaching of his more famous poems; on the pictures of deluded greatness and frustrated ambition, of courtly vice and courtly insecurity, which were the *raison d'être* of the *Magnificence* and the *Negromansir*, which were traced with even keener zest in the *Speke Parrot* and *Why come ye nat to court*, where the folly of the Court is incarnated in the person of Wolsey himself, and which, finally, were carried out with an imaginative brilliance which Skelton nowhere surpassed, and, as I believe, by aid of the same famous satire to which he owed his 'Three Foles,' in the *Bowge of Court*.

The  
'*Bowge of  
Court*.'

The poet finds himself, it will be remembered, one autumn evening at Harwich. He is agitated by the mental conflict between his poetic ambition and the fear

of failure. The recollection of the great poets of old incites him to follow in their steps; but *Ignorance* (i.e. the conviction of his own ignorance) advises him to throw away his pen; and he reflects characteristically that

of reproche surely he maye not mys  
That clymmeth hyer than he may fotyngge have;  
What and he slyde downe, who shall hym save?

(VV. 26—8.)

Harassed with these thoughts he goes to rest, and presently dreams that he sees

a shyppe, goodly of sayle,  
Come saylynge forth into that haven brood.

She casts anchor there, the merchants go aboard to examine her cargo, and Skelton follows after them. The owner is the lady 'Saunce-pere', and her merchandise is *Favore*. Skelton, who appears under the name of *Drede*, would fain come to her throne, on which is written in gold letters, 'Garder le fortune, que est mavelz et bone!' *Daunger*, one of her ladies, sternly repels him; another, *Desyre*, encourages him, and gives him a jewel, *Bone Adventure*, which ensures the favour of *Fortune*, under whose guidance the ship sails,

Fortune gydeth and ruleth all oure shyppe;  
Whom she hateth shall over the sea boorde skyp.

(VV. III f.)

After this introduction, the poem proper begins. The vessel is no sooner fairly started on its way, in happy independence of wind and waves, than the poet perceives among the crew seven 'full subtyll persons.' These prove to be, Favell 'full of flatery,' Suspecte, Harvy Hafter the cunning thief, Dysdayne, Ryotte, Dys-

<sup>1</sup> I prefer, with Dyce, to follow the MS. reading, as it is not certain that Skelton wrote modern languages correctly.

simuler, and Subtylte. *Drede* attempts to join them, but they receive him with marked disfavour: 'They sayde they hated for to dele with Drede.' In a succession of highly dramatic speeches the 'Subtyll persons' express in their several fashions, their hostile sentiments towards the intruder *Drede*. Favell displays his insinuating smoothness of speech, Ryotte comes 'russhynge all at ones,' 'a rusty gallande, to-ragged and to-rente,' boasting loudly of his revels and amours. *Drede's* position becomes increasingly perilous; finally he sees 'lewde felowes here and there' bent on slaying him:

And, as they came, the shybborde faste I hente,  
And thought to lepe; and even with that woke,  
Caughte penne and ynke, and wrote this lytyll boke.

(vv. 530—2.)

The *Bowge of Court* is then an allegorical picture of the follies and the perils of court life. Every feature and incident has to be interpreted with reference to the court. The ship stands for court-favour, the continuance of which is at the mercy of fortune. The crew stand for the vices which flourish under court-patronage. The hero, *Drede*, represents the diffidence which shrinks from the treacherous privilege of court-favour, and rarely obtains it. Skelton's satire had therefore obviously a far narrower scope than Brandt's. He is strange to the impartial pessimism with which Brandt had made as it were the round of society, holding up his unflattering mirror to every class in turn. He strikes at the class which private antipathies and personal humiliations rather than moral instinct had led him to detest, and at it only.

Among the rest, however, Brandt had as we have seen included this class. One of the few chapters in which he dwells for a moment upon his own images of

the Ship is that in which he sarcastically provides for the 'Fools who seek court favour' a private, select vessel of their own:—

They coveyt a shyp for them selfe to attayne  
 Therfore for them this shyp I nowe ordayne.  
 Great lordes servauntis wyll nedes sayle apart  
 Alone by them self they coveyt for to be,  
 For they ne can well use their craft and art  
 Of gyle and flaterynge among the comontye.  
 ...With the comon Folys for that they wyll nat mell  
 I ordayne to them this Barge here present  
 Lyst their fraude myght be theyr owne impedymment.

And then the reference to the court is made explicit:

The kynges Court nowe adayes doth fede  
 Such faynyng flaterers.....  
 No man in Court shall nowe a lyvyng fynde  
 Without that he can bowe to every wynde<sup>1</sup>,

Here we have not only the figure of the Fools of court-favour borne along in a ship, but a suggestion of the hostility to outsiders which reappears in an allegorical form in the antipathy of Skelton's 'subtyl persons' to Drede.

Skelton has not, any more than the author of Cock Lorell, spoken of a crew of *Fools*, or, as his allegorical plan would rather have required, a crew of *Follies*<sup>2</sup>. 'Subtyl' however as they are, they show close affinity to the Brandtian Fool<sup>3</sup>. They are sanguine and improvident;

<sup>1</sup> *Ship of Fools*, II. 211, 'Of flaterers and glosers.'

<sup>2</sup> As More had already done in the epigram quoted above, p. 324, 'Vehuntur in rate Stultitiæ.'

<sup>3</sup> Besides the flatterers themselves, several of Brandt's Fools are as 'subtyl' by their very calling as Skelton's,—e.g. the forger (cap. 102), the speculator in corn (cap. 93), or the usurer (ib.).

buoyed up with overweening confidence in their future,—the confidence which is so strongly emphasised in the *Narrenschiff*, and which Brandt, who had not read Hume, regarded as an unqualified disaster for society. They will ‘have no dealings with *Drede*,’ the personification of diffidence and caution. They travel in a ship guided by Fortune herself;—‘they could not fail, they thought, they were so sure;’ Fortune is ‘theyr frende, with whome ofte she dyde daunce.’ Yet Fortune, as the golden inscription on the throne of Saunce-pere significantly warns them, is ‘evil and good,’ and the ship that she ‘guides and rules’ is hardly in better condition than the *Ship of Cockayne*, which drifts about at the mercy of every accident; while it is significantly added that ‘whom she hateth shall over the sea boorde skyp,’—like the unfortunate Cockayne mariners who fall victims to Scylla or the Laestrygones. The blind chance to which Brandt’s light-hearted sailors abandon the guidance of their ship is in fact *personified* in the ‘Fortune’ who guides the *Bowge of Court* and enjoys the absolute confidence of its crew.

Skelton has thus, in my view, used the Ship of Fools in a manner curiously analogous to that of the author of *Cock Lorell*. There it was the chapter on idle tradesmen, as here it is that on flattering courtiers, which supplies or suggests the *personnel* of the crew, while in both, on the other hand, their bearing on the voyage, and the fortune and destiny of the ship are modelled on the impressive but quite unconnected episode of the *Schluraffenschiff*. The ship which proves so unfaithful to the confidence of the Fools of Cockayne, is for Brandt the type of insecurity: Skelton makes it the symbol of what in his view was the most unstable of human things, court-favour, crowds its deck with the only apparently ‘subtyl’

persons who put their trust in it, and typifies its instability by setting Fortune at the helm,—the allegorical equivalent, as I have already suggested, of the 'blind chance' which controls the destinies of the Ship of Cockayne.

### III.

What was after all to be the fate of the Ship? This BEGGARS. was a topic which as we have seen both Skelton and the author of Cock Lorell had somewhat lightly touched and which Brandt, except in a single case, had left to be inferred from the general bias of his satire. In other words, the prospective ruin of the race of Fools, Knaves, Courtiers, remained at the most a looming catastrophe in the dim and distant future. It was reserved for a London man of business to invert this course, by bringing what may be called the economic aspect of Folly into the immediate foreground, and introducing an analysis of the forms of worldly foolishness by a vivid picture of the ruin and beggary to which they led.

The plan of the *Hye Way to the Spyttel-House*<sup>1</sup> is extremely simple, but not ineffective. Copland takes refuge Copland: The 'Hye Way to the Spyttel-House'. from a passing shower in the porch of the Spyttel-house, and falls into a conversation with the porter, suggested by the motley throng of 'people, as me thought, of very poore estate...with bag and staff, both croked, lame and blynde' who beg admission at the doors. Is it open to all, Copland inquires, to come there for a night's lodging,—'losels' for instance, 'myghty beggers and

<sup>1</sup> Hazlitt's *Remains*, vol. IV. p. 1 ff. Cf. also Dr Furnivall's account of it in his valuable *Captain Cox* volume, p. cii f. It will be seen that my analysis somewhat differs from his.

vacabonds,' and the whole race of vagrants and impostors? This leads to a number of very graphic sketches<sup>1</sup> of vagrant life; the old soldiers, real or feigned<sup>2</sup>, the shabby scholars<sup>3</sup>, the itinerant quacks<sup>4</sup>. And then, becoming impatient of the porter's loquacity, Copland begs for a more summary account 'of all folk in generall That come the hye way to the hospytall.' The porter agrees, and, with a warning that it will be tedious, launches out into a detailed description of the classes that, as we should say, are 'on the road to ruin,' which occupies the remaining half of the poem, and constitutes its *raison d'être*<sup>5</sup>.

It is with this latter part that we are specially concerned. A palpable difference separates it from all that goes before. There is nothing in the first five hundred lines to suggest that Copland was doing other than versify his reminiscences of an actual incident and an actual conversation. The wholly inartificial incident itself and the date, perfectly void of significance, which he assigns to it are not characteristic of deliberate invention. And the porter's talk is genuine talk; with all his discursiveness, he tells for the most part only what might be supposed to engage his hearer's curiosity if not to enlarge his knowledge. He does not recite moral commonplaces, he does not assume the accent of the professional moral reformer whose business is merely to reiterate things liable to be ignored rather than forgotten. He does not, in a word, pass from conversation to sermon or satire. With the second part however this is hardly the case.

<sup>1</sup> I cannot agree with Mr Hazlitt that the literary merit of the dialogue is 'of an infinitesimal kind.' It is one of the most vivid and vigorous productions of the time.

<sup>2</sup> v. 279 ff.

<sup>4</sup> v. 430 ff.

<sup>3</sup> v. 391 ff.

<sup>5</sup> vv. 565—1089.

Copland, no doubt, keeps up the illusion very well. He puts his questions and receives the replies with the same ingenuous curiosity as before. But that does not obscure the fact that the talk which was before full of minute detail and special knowledge, is now, for the most part, such as any close observer of the world at large might arrive at for himself. The opening verses strike the note of this changed manner at once; for they are almost identical with the opening stanza of Lydgate's enumeration of Fools.

The chief of foolis, as men in bokis redithe,  
 And able in his foly to hold residence,  
 Is he that nowther lovithe God ne dredithe,  
 Nor to his chirche hathe none advertence,  
 Ne to his seyntes dothe no reverence,  
 To fader and moder dothe no benevolence,  
 And also hath disdayn to folke in poverté,  
 Enrolle up his patent, for he shall never the<sup>1</sup>.

This is Copland's version :

There cometh in this vyage  
 They that toward God have no courage,  
 And to his worde gyve none advertence;  
 Eke to father and mother do not reverence;  
 They that despyse folk in adversyte<sup>2</sup>.

The *Hye Way* catalogue of prospective paupers is thus tacitly connected at the outset with the traditional lists of Fools. The remainder does not belie the analogy. For it becomes obvious as we proceed that it is not, as it professes, a catalogue of prospective paupers at all, but of those only whom their own vice or fatuity leads to pauperism; not a summary of 'all folk in generall that come the hye way to the hospytall,' but only of those

<sup>1</sup> Lydgate, *Order of Fools*, vv. 9—16.

<sup>2</sup> *Hye Waye*, vv. 573—7.

who incur this 'vyage' by their own folly. Yet a *bona fide* discussion of the grounds of poverty in the fourth decade of the sixteenth century could hardly have ignored the effects of enclosure, or of the economic tyranny which had just before been exposed with trumpet-tongue in the *Supplication of the Beggars* and the *Dialogue of a Gentleman with a Husbandman*. The *Hye Way*, in spite of the compassion for poverty displayed at the outset, contains no allusion to such things. Barely two or three of Copland's three score incur their ruin innocently. The rest fall easily into a classification analogous to that adopted for the *Ship of Fools*. Thus we have a class of more or less criminal or riotous offenders: the irreligious<sup>1</sup>, the vicious priest<sup>2</sup>, the glutton<sup>3</sup>, the drunkard<sup>4</sup>, the lecher<sup>5</sup>, the pander<sup>6</sup>, the swearer<sup>7</sup>, the slothful<sup>8</sup>, the adulterator of food<sup>9</sup>. The others fall generally in two groups,—the 'fools' of apathy or of presumption. They give too much liberty to their children<sup>10</sup>, or their wives<sup>11</sup>, or their servants<sup>12</sup>, or their debtors<sup>13</sup>, they neglect their estates<sup>14</sup>, or their households<sup>15</sup>, or they help others when they are in more need of being helped themselves<sup>16</sup>, go to law for trifling causes, draining their purses in bribes before the trial<sup>17</sup>, or in costs after it<sup>18</sup>; they take barren farms at extravagant rentals<sup>19</sup>, or marry before they have the

<sup>1</sup> v. 574.<sup>2</sup> v. 583 f.<sup>3</sup> v. 818 f.<sup>4</sup> v. 914 f.<sup>5</sup> v. 830 f.<sup>6</sup> v. 687 f.<sup>7</sup> v. 850 f.<sup>8</sup> v. 866 f.<sup>9</sup> v. 693 f.<sup>10</sup> v. 806 f., *Ship of Fools*, cap. 6.<sup>11</sup> v. 736 f., and *Gyl of Brentford*.<sup>12</sup> v. 768 f.<sup>13</sup> v. 802 f.<sup>14</sup> v. 613 f.<sup>15</sup> v. 824 f.<sup>16</sup> v. 727 f., *Gyl of Brentford*, passim; *Ship of Fools*, cap. 58.<sup>17</sup> v. 619 f., cf. *Ship of Fools*, cap. 71.<sup>18</sup> v. 637 f.<sup>19</sup> iv. 786 f.

means<sup>1</sup>, or court a reputation for generosity by giving unnecessary sureties<sup>2</sup>.

At the same time it is clear that the scope of Copland's satire is narrower than Brandt's<sup>3</sup>. His subject is beggary and he keeps within the limits of the forms of Folly which issue in it. He excludes therefore both the successful criminal and also his less fortunate brother whom the 'road to ruin' conducts not to the Spyttel-House but to Tyburn<sup>4</sup>; while Brandt's scheme, which took account of the punishments of another world—where, as he warns one of his Fools, 'thou shalt have gall a thousand-fold for thy little honey-drop here,'—could have included the entire range of crime<sup>5</sup>.

<sup>1</sup> v. 700 f., and *Gyl of Brentford*.

<sup>2</sup> v. 706 f.

<sup>3</sup> As a direct proof of familiarity with the *Ship*, I may quote the illustration of mistaken self-neglect:

Brandt, cap. 58, *syn selbs vergessen*:

Wer leschen will eyns andern husz  
So im die flamm schlecht oben usz  
Und brennt das syn in alle macht  
Der hat uff syn nutz wenig acht.

Copland, v. 724 f.

They that dooth to other folkes good dede  
And hath themselfe of other folke more nede,  
And quencheth the fyre of another place,  
And levethe his owne, that is in wors cace,  
When it is brent, and woteth not where to lye.

<sup>4</sup> Cf. vv. 882 f., where the extortioners and thieves are deliberately excluded. So the envious, for a different reason, v. 982. All three are included in the *Ship of Fools*. Cf. also, in the latter, as instances conspicuously outside Copland's scheme, the fools that marry for wealth (Barclay, I. 247), and those that take many benefices (ib. I. 156).

<sup>5</sup> Another source of divergence is that Copland's plan confined him strictly to those whose folly brings disaster on themselves primarily. Thus Brandt's idle servant (cap. 81) is blamed for impoverishing his master, Copland's (v. 778) for ruining himself.

In this deviation, however, Copland has merely, like the author of the *Cock Lorell* and Skelton before him, applied the idea of a series of Fools to a particular class. His are the fools who come to beggary, as theirs are the fools of commerce and of the court.

## IV.

ORDERS  
OF  
KNAVES  
AND  
FOOLS.

About the time when Copland was thus attempting to classify the world of beggars, the beggars were developing an actual classification of their own, the full disclosure of which, a quarter of a century later, took respectable England by surprise and contributed a quite novel element to the methods, as well as to the materials of social satire. These vagrants and outcasts, the *débris* of organised society, had organised themselves. They had official chiefs and various grades of subordinate rank, each with nicely defined powers and privileges, and bearing enigmatic titles which enhanced the vague prestige which they inspired in the uninitiated public. No wonder that to the printer Awdeley, who first gave a detailed account of the system, it at once recalled the most celebrated English tradition of the kind, the 'Order of Knaves' founded by the rogue Cock Lorell; and that he called his exposition, with direct allusion to this, the 'Fraternity of Vagabonds<sup>1</sup>.' It was another evidence of

<sup>1</sup> To leave no doubt about this, he introduced the beggar-chief or 'Upright man,' on his title page, holding fraternal colloquy with the king of thieves :—

Our brotherhood of vacabondes  
If you would know where dwell  
In Gravesend Barge which seldome standes  
The talke wyll shew ryght well.

the same reminiscence that he appended to it a new, and in part I suspect original, version of the Order of Knaves itself.

The *Quartern of Knaves*, or *serving-men*, thus closely associated with the Fraternity, belongs nevertheless to a distinct literary genus. The latter is a matter-of-fact account of a real society, an abstract of titles and offices, the first sketch of an Alsatian *Debrett*. The other is a satirical classification of social types, like the 'Bote' or the 'Ship.' Both take the form of a *catalogue raisonné* of cant-titles, but they differ as a glossary of names differs from a discursive explanation of *nick-names*. The Vagabonds' titles are of their own coinage, invented by rogues for rogues, with an eye, as a rule, either to disguise or to euphemism. Those of the 'knaves,' on the contrary, are in the main the objurgatory epithets of their masters,—brief and sarcastic catchwords out of the immemorial bill of charges against those that serve. Hence we have, instead of the mere descriptive sketches of the *Fraternity*, a series of satirical characters: Unthrift, for example, 'that will not put his wearing clothes to washing, nor black his own shoes' (No. 22); Ungracious, he 'that by his own will will bear no manner of service, without he be compelled thereunto by his rulers' (23); *Nunquam* (24)—'he that when his master sendeth him on his errand, he wil not come again for an hour or 2,'—a good comment on the familiar exclamation of an impatient master in the dramatists ('*When, Lucius, when?*' &c.); *Obloquium* (6) 'hee that will

Awdeley :

Some orders of my knaves also

In that Barge shall ye fynde:

For nowhere shall ye walke I trowe

But ye shall see their kynde.

take a tale out of his master's mouth and tell it himself<sup>1</sup>.'

The Quartern of Serving-men thus added yet another to the English class-satires. Connected with the *Ship of Fools* only through the link of *Cock Lorell's Bote*, it approximated, in a certain matter-of-fact way, more nearly than either of these famous books, to the social satire of the next century. Neither of them dealt very largely in pure analysis of character. In the *Bote* it is willingly sacrificed to description, in the *Ship* to morals and parallels. Awdeley's efforts in this kind it will be seen are wholly unpretending as art, but they were quite clear and decided in method. They were a step, distinct, however minute, in the long and slow advance of literary realism, in the better sense, upon the territory of mediaeval allegory. This advance was stimulated by every influence which led to the study of society at first hand; and we owe not a little to the maligned vagabonds whose eccentric life drew them perforce into literature. The most malicious study of a real rogue differs from a mere effort to personify roguery; and though an allegorical meaning might still be conceivably attached, yet every fresh trait made it both harder to secure and easier to dispense with.

*The  
Twenty-  
five Orders  
of Fools.*

While the order of 'Knaves' was thus preparing to ripen into a satire of manners, the older and more famous order of Fools was undergoing a revolution of

<sup>1</sup> Cf. also, especially, Jeffrey Godsfo the swearer, *Ingratus* the unthankful, Nichol Hartles, who 'when he should do ought for his master his heart faileth him.' Is it credible that such names as these I have quoted, figured in the list of a professional rogue? Or did Awdeley, as I should rather conjecture, revise and supplement the original list? This is supported by the fact that the older tradition knew of only *twenty-four* orders of knaves (Copland's *Hye Way*, v. 1065).

form. The fantastic literary fashion of 'quarterns,' which had converted the 'twenty-four' knaves into twenty-five, did not spare the 'one order, without number, of Fools<sup>1</sup>.' Gyl of Brentford's foolish legatees are already an exact quartern; the first count producing twenty-four,—'nay, set in one mo, she interposes, to make a hole quarteron<sup>2</sup>;' and the twenty-five orders of Fools here tacitly announced, are at length assumed without question in the well-known and important ballad of which I have now to speak.

The ballad of the 'xxv orders of Fooles<sup>3</sup>' is attached even more closely to the *Ship* than the parallel 'quartern' of knaves is to the *Bote*. If Cock Lorell 'confirmed' the latter, if his 'knaves' were to be met in the same company, the new twenty-five orders of fools were entirely recruited from Brandt's crew. Not only are their characters directly suggested by as many chapters in the *Ship of Fools*, but in nearly every case they are described more or less in Barclay's words. Thus the sixth Fool, who preaches without practising, is described by the author of the ballad:

He is a foole which to others doth preach and tell,  
And yet this foole is ready himself to go unto hell.

obviously from Barclay's introductory stanza to the chapter on Fools of this class:

So he is mad which to other doth preche and tell  
The waye to hevyn, and hym selfe goth to hell—

So, e.g. Fool [VII]:

He is a foole, and ever be shall,  
That others judgeth and himself worst of all—

<sup>1</sup> In the *Hye Way*, v. 1069.

<sup>2</sup> *Gyl of Brentford's Testament*, v. 214.

<sup>3</sup> Reprinted by the Philobiblon Society, *Old Ballads and Broad-sides*, p. 128 f.

is from Barclay's corresponding chapter (I. 152):

He is a fole, and onys shall have a fall  
Syns he wyll other juge, hym selfe yet worst of all.

Fool [XII.]:

This fooles golde is his God, wrongfullye got,—

corresponds to Barclay [I. 29]:

Gold is your god, ryches gotten wrongfully.

Nearly every stanza is constructed on the same principle<sup>1</sup>. The ballad is thus a mere epitome of the *Ship*

<sup>1</sup> The following list will give a fairly complete notion of the composition of the piece. The references are to the chapters of Brandt, and to the page and volume of Barclay (ed. Jamieson).

- Fool I. Sins against right and law=Cap. 47 (B I. 230) *von dem weg der seligkeit*.  
 II. cannot get wisdom with age=Cap. 5 (B I. 47) *von altten narren*.

 VII. judges others=Cap. 29 (B I. 152) *der ander lüt urteilt*.  
 VIII. eschews wisdom=Cap. 107 (B II. 281) *von lon der wissheit*.  
 IX. scorns neighbours=Cap. ?.  
 X. cannot keep secrets=Cap. 51 (B I. 243), *heymlikeyt verschwigen*.  
 XI. improvident for age=Cap. 70 (B II. 43) *nit fürsehen by zyt*.  
 XII. avaricious=Cap. 3 (B I. 29) *von gyttikeyt*.  
 XIII. delights in strife=Cap. 71 (B II. 48) *zancken und zu gericht gon*.

of *Fools*, and to all appearance an epitome made at hap-hazard by some one quite free from the dominant antipathy to certain types of Folly which so powerfully colours the choice of Brandt and Lydgate. It is quite without bias,—and without savour. Both qualities become still more palpable when it is compared with the rich and nervous humour of the earlier and native quartern in *Gyl of Brentford*. There the changes are rung upon a genuine English conception of folly through a host of pleasant proverbs,—the folly, half absent-minded blundering half short-sighted imprudence, of the man who lends his horse and walks himself, gives all and keeps nothing, forgets his fork when he goes out to dine, bids his friend drink first when he is thirsty, or in a score of similar ways violates the sturdy, honest, unchivalrous self-regard of middle-class England<sup>1</sup>. But this

XIV. foolish messenger=Cap. 80 (B II. 86) *von narrehter botschaft*.

XV. neglects divine punishments=Cap. 88 (B II. 136) *von plag und stroff gottes*.

XXIII. seeming wise=?.

XXIV. rashly risks death=Cap. 45 (B I. 225) *von mutwilligem ungefell*.

XXV. walks about in church=Cap. 44 (B I. 220) *gebracht in der kirchen*.

<sup>1</sup> Cf. Dr Furnivall's short criticism in his *Captain Cox*, p. ciii., as well as his (privately printed) edition of it.

old English quartern of Fools was now ousted from its place by the epitomised Brandt, as Lydgate, the father of English Fool literature, had been ousted by Brandt himself. The English Fools were driven from their own order, and the German Fools installed in their place. We have no more vivid illustration of the popularity of the *Ship of Fools*, which it remains to follow in its final phase.

## V.

THE SHIP  
AMONG  
THE LATER  
ELIZA-  
BETHANS.

The *Ship of Fools* shared with no second English book of its day the privilege of being read for nearly a century after it was written. Skelton was perhaps better remembered than Barclay, but it was a half-mythical jest-book rather than his own verse which kept his memory green; and the question 'Who now reads Skelton?' might probably have been asked without serious error fifty years before Cowley asked it. The *Ship of Fools* on the other hand had a sufficient combination of attractive qualities to resist, or rather to appeal successively to, the changing fashions of several generations. A preacher's manual to the merry Vicar of Diss, a model of social satire to the author of *Cock Lorell* and his successors, it was to a much larger public a book of sheer amusement,—a book put on the same shelf with romances and jest-books, with *Howlglass* and the *C. Mery Tales*. Laneham, it is true, classes it among the 'philosophical' books of Captain Cox's library, but 'philosophy' with Captain Cox and Laneham meant *Gyl of Brentford* rather than More or Elyot. 'We want not also,' wrote another country-gentleman some years after Laneham's well-known letters, 'pleasant mad-headed knaves that bee properly learned and well-read in diverse pleasant bookes

and good authors; as Sir Guy of Warwick, the Four Sons of Aman, the Ship of Fooles, the Budget of Demaundes, &c....<sup>1</sup>. This reputation it doubtless owed entirely to the wood-cuts. And it is probable that the wood-cuts facilitated its popularity with that somewhat different class of readers of Laneham's generation who favoured the new literary fashion of Emblem-books. Brandt wrote a quarter of a century before Alciatus, the accepted founder of emblem-literature; but the majority of his wood-cuts are nevertheless genuine emblems,—literal representations, that is, of symbolic sayings, which differ from later specimens only in so far, that their symbolism is drawn from German proverbs and not from ancient fables. And Brandt's peculiar pessimism, again, is only distinguished by its absolute sincerity from the official despondency of the Emblematists; the uncertainty of the future, the littleness of man, the imminence of death, is the first article in his creed as in their profession; and one of Brandt's most forcible illustrations of it—Death and the Fool—was adopted not only into the most famous of all German Emblem-books, the Dance of Death, but into the common stock of European imagery<sup>2</sup>. It may thus have been no accident that the first English Emblem-book, Van der Noot's *Theatre for Voluptuous Worldlings*, was succeeded in a few months by a new edition of the *Ship of Fools*; and that in this new edition Barclay's clumsy English rime-royal is accompanied, as if to propitiate more elegant tastes, by Locher's Latin version in elegiacs, the conven-

*Emblem-books.*

<sup>1</sup> *The English courtier and the country-gentleman*, 2nd edition, 1586.

<sup>2</sup> *Narrenschiff*, cap. 55, *nicht vorsehen den tod* (a Fool overtaken by the skeleton Death and trying to elude him), embodied in later editions of the *Todtentanz*, as 'Der Narr.'

tional metre of Emblem-writing. But the *Ship of Fools* had less fragile and casual grounds of popularity than this. The Brandtian 'Ship' was never again imitated on the same scale as is the *Bote* or the *Bowge of Court*<sup>1</sup>, but it survived even in the palmy days of the drama as an inexhaustible source of allusion. It would even seem to have found its way into the comic legend-lore of London, to have been localised in the Thames, and been seen regularly plying for hire between Billingsgate and Gravesend in the form of the well-known 'Gravesend barge.' Awdeley, as we saw, had already treated this barge as the equivalent of Cock Lorell's Boat, itself merely a local Ship of Fools; and among the dramatists the Thames is the almost invariable highway of the Ship. Nash makes it call at the Isle of Dogs<sup>2</sup>; Greene brings it down from Oxford to Bankside<sup>3</sup>; and perhaps it is not too bold to detect a

<sup>1</sup> The 'ballett against the Ship of Fooles' (*Sta. Reg.* 1567-8) was however presumably a satire upon a collection of 'Fools' in the manner of the '*XXV Orders*,' but using the Ship as framework. It can hardly have been an attack upon the book.

<sup>2</sup> 'Here's a coil about Dogs without wit,' says Summers, in Nash's *Summers' last Will and Testament*, provoked by Orion's praise of dogs; 'if I had thought the Ship of Fools would stay to take in fresh water at the isle of Dogs, I would have furnished it with a whole kennel of collections to the purpose.'

<sup>3</sup> 'I will make a ship,' says Ralph to the Oxford doctors in *Friar Bacon*, 'that shall hold all your colleges, and so carry away the *university* with a fair wind to the bank side in Southwark.' 'And I,' adds Miles,

'Will conjure and charm,  
To keep you from harm;  
That *utrum horum mavis*,  
Your very great navis,  
Like Barclay's ship,  
From Oxford do skip  
With colleges and schools,  
Full laden with fools.'

suggestion of this association in the voyage to Gravesend, which the *Cobler of Canterbury* and his friends beguile with stories of Fools of a particular class,—the ‘eight orders of Cuckolds’<sup>1</sup>. Another London institution seems to have also been constituted a local Ship of Fools. From at least the middle of the sixteenth century the ‘voyage’ of the cart of condemned criminals from Newgate to Tyburn was a current jest, obvious to any one familiar with the doomed ship bound for *Narragonia*<sup>2</sup>. Less specific allusions abound. Whether a

<sup>1</sup> At the same time the *Cobler of Canterbury* (1590) like its successor the *Tincker of Turvey*, is of course a direct imitation of the method of the *Canterbury Tales*. And it is not to be forgotten that a voyage, with its enforced leisure, is one of the most natural of frames for a series of stories like this. Clough’s *Mari Magno* will occur to every one; *Westward for Smelts* is a contemporary example more in point, where a set of fishwives tell tales to their Thames waterman as he rows them home.

<sup>2</sup> Cf. e.g. the close of the *Ballad against Unthrifths*, Philobiblon Soc.: *Ballads and Broad-sides*, p. 226 f.

‘Then some at Newgate do take ship  
Sailing ful fast up Holborne Hil;  
And at Tiborn their ankers picke,  
Ful sore indeed against theyr wil.’

So S. Rowlands, *Knave of Clubs*: ‘A politique Theefe,’ ad fin. ‘for Newgate voyage bound.’

Can this transition have been assisted by a mere mistake? Barclay’s chapter on the ‘way of felicitie’ contains a description of the *cart of sin*. This cart is in the woodcut drawn by the ‘sinner,’ but Barclay’s words are ambiguous, and the author of the *Twenty-five Orders*, copying them, apparently understood that the offenders were drawn *in* the cart:

‘Many fooles the carte of sin doth drawe,  
Nourishing their sinne against all right and law;’

and this stands at the very outset of his list. To a London citizen did not this inevitably suggest the Tyburn cart? And the ‘cart of fools’ would inevitably become a Ship of fools.

satire upon loose livers<sup>1</sup> or a grave exposure of delusion were on hand, the 'Ship waiting for its freight of Fools,' was an allusion that never lost its flavour<sup>2</sup>.

The day had gone by however, when it could be anything more. Such importance as the book still retained as a constructive and moulding force in English literature, belonged to it not as a piece of humorous imagery, but as a collection of satiric types. It would even appear that the full scope of Brandt's satire was now for the first time appreciated. His imitators hitherto had applied the method of the ship only to particular classes—to knaves, courtiers, paupers, serving-men. All of them were strongly biassed by the instincts and prejudices of their own. They felt the well-to-do shop-keeper's hatred for knavery, the disappointed aspirant's antipathy to the court. Booksellers, printers, parsons, not one of

<sup>1</sup> The 'Ship of Fools' is however to be kept apart from the somewhat analogous notion of a Ship of Drunkards, which appears in T. Heywood and Cowley, but has in England at least a different history. The fancy of a number of toppers persuaded that they are on a voyage, provisioning the ship, hauling ropes, &c., appears (1) in Athenaeus, II. 5; (2) in Jan Enenkel's *Wiener Meerfahrt* (1200—1250), where this is told of a group of Viennese (repr. by Hagen, *Gesamtabent.* LI. cf. also *Zt. f. d. Alt.* 17, 354); there can here naturally be no question of Athenaeus; (3) probably from Enenkel, in Aloysius Passerino's *Historia lepida de quibusdam ebriis mercatoribus*, Brixen, 1495 (Mussafia in *Germ.* x. 431 f.); (4) Heywood's *English Traveller*, II. 1, no doubt from Athenaeus, and (5) Cowley's *Naufragium Jocularé*, from Heywood.

<sup>2</sup> E.g. Nash again, in *Pierce Penniless*: 'thus the Ship of Fools is arrived in the haven of felicitie;' Decker in *Gul's Horn-booke*: 'longing to make a voyage in the Ship of Fools;' in the *Whore of Babylon* (Decker's Works, II. 214): 'your ordinarie is your Isle of Guls, your Ship of Fooles;' and in *Patient Grissel*, III. 1.: 'Here's a ship of fooles ready to hoist sail; they stay but for a good wind and your company.' Even the grave R. Scot (*Disc. of Witchcraft*, x. 6): 'Such should be embarked in the ship of fools.'

them had achieved the free outlook, the intellectual disengagement of the universal satirist. Not one of them approached either the tragic pessimism or the cynical scorn for humanity at large which seriously adopts as its motto the '*plena stultorum sunt omnia*.'

As the century drew to its close however, this provincialism sensibly lost ground. For the first time in our literature, a distinct literary class had begun to emerge, who, themselves neither citizens nor courtiers, parsons nor politicians as such, stood, as no other class did, in a sort of neutral relation to the rest of society. In their hands the stage, the focus of Elizabethan literary life, was becoming instinctively in some degree what Jonson consciously and in set terms strove to make it altogether, an arena for the exhibition of every man's humour,—a mirror, as his greater contemporary, echoing the thought of the old *Ship of Fools*, put it, in which all the world might see the bodily image of its own qualities. And it was in close neighbourhood to the stage that the Brandtian satire of society at large under the scheme of a collection of Fools, was for the first time taken up. The delightful *Jigge*<sup>1</sup> of Tarlton naturally makes no pretension whatever to the seriousness of Brandt. The favourite jester of Elizabeth does not pose as a moral reformer. He rejects even Brandt's suggestive imagery, and instead of summoning his Fools with solemn irony to embark on a mysterious and ill-omened voyage, trots them merrily through Fleet Street in a pony-cart to be exhibited in a puppet-show<sup>2</sup>:

Ime an excellent workeman, and these are my tooles ;  
Is not this a fine merrie familie ?

<sup>1</sup> 'A Horse-load of Fools,' printed from Collier's ms. by Mr Halliwell in *Tarlton's Fests* (Shakspeare Soc.), p. xx. f.

<sup>2</sup> It would be tempting to find the origin of this figure in

One by one the Fools are displayed; first Tarlton himself, as the 'player fool,' and the 'converted player' Gosson, as the 'Puritan fool;' then a series of typical figures,—the Fool of State, who 'being born verie little would faine be verie great;' the poet-fool, starving and pastoral-writing; the physician-fool, 'who killeth us all I weene with such skille and arte.....he makes dying quite a pleasure;' the lover-fool, 'with ragged hair and band untied;' the citizen-fool, that 'hates all kindes of wisdom, but most of all in playes;' the country-fool, anxious to be made a gentleman,—with many other fools not specially described,—'lawyer fooles, Sir John fooles, fooles of the court,—a large and loving familie.' 'But *noverint universi*,' he concludes, 'good neighbours I have done; you have seen my horse load of fooles.'

Such was the pleasant use to which the best of Elizabethan jesters put the conception of the austere doctor of Strassburg. The buoyant humour with which the genus Fool is distributed into species, each attached to a particular calling, is only a heightened reflexion of the grim irony of the *Ship of Fools*. No doubt Tarlton confined himself to professional types, and those for the most part unknown to Brandt; but a *Jigge* was not the occasion for moral satire, and it was only in so far as it was a satire of manners that he could in any sort adopt or imitate the *Ship of Fools*.

Brandt's first woodcut (preceding the prologue), where a cart loaded with fools is drawn by a pair of horses tandem, the leader being however only visible on a close inspection. But precisely this woodcut was omitted by Locher, and naturally by Barclay also; and that Tarlton had seen the original is not to be assumed. His neologisms 'Player-fool,' 'courtier-fool,' &c., are also a curious parallel to Brandt's *Büchernarr* and the like, which nothing in Barclay could well suggest.

Exactly the opposite method was followed, twenty years later, by Tarlton's 'adopted son,' Robert Armin. The well-known *Nest of Ninnies* is one of the earliest illustrations of the combination of two distinct literary genres which in the first half of the seventeenth century were often blended,—the jesting anecdote and the satirical character. Its substance is a string of anecdotes about six well-known court-fools of recent history, which he had published three years earlier independently under the title of *Foole upon Foole*. In so far, it belonged to the class of jest-books devoted specially to the sayings of professional 'fools,' combining the plan of connected histories of a single Fool, like the Jests of Skelton, Scogin, or Tarlton, or the German *Claus Narr* (the Duke of Saxony's Fool), and *Clawwert*, with histories of a series of 'Fools,' such as the slightly earlier *Jack of Dover*<sup>1</sup>. This somewhat crude and unpretending collection of anecdotes Armin now provided with an ambitious allegorical framework, in which the feats of the six simpletons and buffoons are laboriously made to symbolise as many human failings. The World, 'wanton sick as one surfetting on sinne,' is shown the images

R. Armin :  
'*Nest of  
Ninnies*,'  
1608.

<sup>1</sup> I see that Dr Grosart has also made this comparison, *Works of Armin*, p. xi. At the same time the fools whom Jack of Dover reviews in his quest for the 'Foole of all Fooles,' are rarely professional, like Armin's; most frequently they are either the local 'character' or the local prodigy,—'a certain simple fellow.....that could not yell remember his owne name yet would many times give.....good admonitions,' or 'a plaine country farmer, but none of the wisest,' or the 'marvellous boy' of Windsor; but in many cases the stories merely relate casual witticisms, and are indistinguishable from those, for instance, of the *C. Mery Tales*. Thus the 'Foole of Lincoln' is an adaptation of Socrates and Xantippe, and the 'Foole of Northampton's jest might be that of 'any husband with any wife.' *Jack of Dover* is reprinted in Percy Soc. vol. 7.

of the fools in the 'prospective glass' of the cynic Sotto, who briefly moralises them in turn. Thus the wasteful fool Jack Oates is found to represent the prodigals, the 'fat fool' Camber, the wanton and glut-tonous, the 'lean' and envious 'Leanard,' the grasping landlords, and the 'mirth without mischief' of Will Sommers is made by a violent effort of cynicism to stand for 'saucie adventure in follie.' The 'clean fool' is ingeniously interpreted of the sort of people who fall into the ditch in their anxiety to avoid the mire, and the last, 'the Very Foole,' of the worldly religious, 'who come to church to meet acquaintance more than for piety.'

The *Nest of Ninnies* was thus a somewhat clumsy<sup>1</sup> attempt to turn a book of personal anecdotes into a universal satire on the age. 'Stultorum plena sunt omnia,' he wrote on the title-page, thus voluntarily associating his book with the older Fool-literature, rapidly passing into oblivion, of which this was the fundamental maxim<sup>2</sup>. And there was some ground for the association. The starting-point of Fool-literature was also the court-fool, and the existence of this ludicrous and universally familiar synonym for folly was the source of most of its success and not a little of its piquancy. To that starting-point, still recalled as it was by the wood-cuts of the *Ship of Fools* if not by its text, Armin returned, when he

<sup>1</sup> Necessarily clumsy, because the six court-fools were originally chosen for so wholly different a purpose. For moral allegory Oates and Camber were too much alike, while Sommers is drawn with an undisguised partiality which proved awkward when he had to pass for a type of folly.

<sup>2</sup> A little later (1609) Decker prefixed the same motto to a work which as we shall see in the next chapter was also, by a somewhat longer route, descended from the *Narrenschiff*,—the *Gul's Horn-booke*.

derived his satire of contemporary folly from the history of the contemporary court-fool. No doubt it was not in his case a felicitous idea; the intractable realism of his subject maimed and harassed his satire, where Brandt's only gained effect from the motley and bells which his *Narren* alone retained of the fools of history.

The epoch of almost unparalleled fertility in satire, *Later Satirists*, which may be said to open with the *Nest of Ninnies*, could still find a relish in motives more or less kindred to his, but the *Ship of Fools*, still faintly discernible there, sinks definitely below the horizon. Samuel Rowlands, the prolific and genial 'Martin Marke-all' of Jonson and Decker's London, could still amuse the fashionable world with endless literary processions of Knaves and Fools, in which satire, anecdote, fable and epigram, were heaped in confusion together<sup>1</sup>; and it is easy to detect, say in his 'Sixteen Knaves, marching in order<sup>2</sup>,' and cleverly tricked out with humorous and highly-coloured detail, the apotheosis of the 'Quartern' of the honest bookseller of sixty years ago. But we have in fact moved into a new phase; the old form and method linger, but their work is done. They had furnished a mould in which the early efforts of social satire slowly took shape. New influences and better models were now at hand, and the old were gradually disused. Above all we must count two forces; that of the drama, which tended by its intrinsic variety of type to make the old plan of a *row* of 'knaves' or 'fools' hopelessly insipid; and that of Theophrastus' Characters, newly edited by Casaubon,

<sup>1</sup> For example, the collection called *A Fooles bolt is some shot*, contains stories headed 'A flattering Fooles bolt,' 'A shifter's bolt,' 'A clownes bolt,' 'A Spaniard's Foolish bolt,' 'A Merry Fooles bolt,' &c.

<sup>2</sup> In the *Knave of Hearts*, 1609.

which showed how this variety might be indefinitely increased by patient study of character, and drew satire into the subtle psychological way, from which the old formal classifications were as much beyond recovery as the Seven Deadly Sins, or the Fifteen Signs of Doom<sup>1</sup>.

<sup>1</sup> Another result, which it would be interesting to work out at length, was the transition from the satirical to the purely analytical disposition which is obvious from the first in these English Theophrastians. They try to appeal to admiration as well as to contempt. Hall, the earliest, has his picture of 'A good magistrate,' Overbury his 'Good Woman,' 'a Wise Man,' 'a Noble Spirit,' &c., Breton his 'good,' 'wise,' 'honest' men, Earle his 'grave divine' and his exquisite if slightly unreal picture of 'a child.' So, the astounding prodigals and gluttons, &c., who consult the *Man in the Moone* are followed by an equally astounding 'Virgin.' Breton's title-page 'where the Best may see their Graces, and the Worst discern their Basenesse' almost literally echoes Hamlet's well-known prescription for the stage.

## CHAPTER VII.

### GROBIANUS AND GROBIANISM.

AMONG the various satiric currents which were excited by the passage of the 'Ship of Fools,' the most remarkable and lasting by far remains to be mentioned. Murner's Gilds of Fools and Assemblies of Gowks, vivid as they were, were not remembered beyond the century, the Ship of the *Bundschuh* lost its significance with the social crisis which brought it forth. But the 'order of Grobians' or 'School of Slovens,'—a mere parenthetic sarcasm of Brandt's in the midst of his abuse of the *Grobe Leute*, ripened in the hands of two gifted successors, a young student at Wittenberg and a schoolmaster at Worms, into a satiric creation the point of which was not blunted a hundred and eighty years after, and which found eager imitators in the London of Jonson and the Oxford of Selden. As a pregnant type of sixteenth-century Germany its hero stands beside Faustus<sup>1</sup>. What Faustus is to its intellect, Grobianus is to its manners. As Faustus stands for the Titanic aspiration of Humanism which repudiates divine law for the sake of infinite power, so Grobianus represents the meaner presumption which defies every precept of civil decorum and suave usage in the name of appetite and indolence. 'Faustus' is a

INTRO-  
DUCTION.

<sup>1</sup> Scherer in *Allg. D. Biog.*: 'Dedekind.'

tragedy of the scholar's chamber, of the magician's cell; 'Grobianus' is the drastic comedy of back-parlour symposia where unseemly manners hob-nobbed with gross living and with foul dress.

For such satire German town life offered material of extraordinary variety as well as amount. The 'new saint' whom Brandt by a careless stroke had brought into existence, had his busy votaries everywhere and in almost all ranks of society. The taunts which refined Europe directed against the gross and drunken being whom it assumed to typify the country of Goethe, were the commonest of international amenities. Erasmus, who could be severe upon the filthiness of the English streets, upon the house floors with their twenty-year old carpeting of indescribable abominations<sup>1</sup>, mourned the change from the obsequious hospitality of an English inn to the rough fashions of its German counterpart<sup>2</sup>. 'Porco tedesco,' 'inebriaco,' 'Thudesque yvrongne<sup>3</sup>,' 'Comedones,' 'Bibones,'—were phrases as familiar as the later 'drunken Dutchman,' 'butter-box,' &c., of the English stage. In Germany itself these taunts were industriously turned to account by satirist and reformer. 'We must indeed be well-pleased,' wrote Kaspar Scheidt, 'with these aristocratic and courtly titles of ours, since we hold so fast to that which procured them for us<sup>4</sup>'.

But Grobianism was not to be so lightly put to shame. It was not merely the blundering improprieties of ill-breeding, but an aggressive and militant grossness, trampling on

<sup>1</sup> Erasmus, Epp. 432, c.

<sup>2</sup> Id. Colloquia: *Deversoria*.

<sup>3</sup> Du Bellay's sonnet (No. 68 of the *Regrets*).

<sup>4</sup> Letter to Dedekind prefixed to his translation of the *Grobianus* (1551). Cf. the chapter: 'Germanis Ebrietas ab Italis objicitur' in the *De generibus Ebriosorum* (1515), and Hutten's *Inspicientes*.

refinement, and glorifying its own excesses,—not ἀγροικία, but βδελυρία and ἀνασχυντία,—which the satirist had to meet; and he attacked it with every variety of resource. Here it was a plain speaking ‘elegy’ on drunkenness<sup>1</sup>; there a polemical dialogue, where, in all seriousness, Bacchus and Silenus defend the art of drinking from the attacks of a temperate Pittacus<sup>2</sup>; or a romance where the ruin of a gross-living prodigal is held up as a warning to gross-livers in general<sup>3</sup>; or a drama where, still more solemnly, the typical German reveller is startled in the midst of his excesses, like the heroes of *Everyman* and *Hecastus*, by the summons of Death<sup>4</sup>. But far oftener the satire was ironical. And here it fell in with a fashion which found extraordinary favour with Humanists, small and great, from Erasmus and Scaliger and Heinsius and Pirckheimer to Martin Schook and Conrad Goddaeus,—the fashion of burlesque *encomia*. Often no doubt these were little more than *jeux d’esprit*; but satire insinuated itself in details if it was excluded from the general intention, and it is hard to draw an absolute line between harmless laudations of Smoke and Shadow, Blindness and Deafness, Gout and Ague<sup>5</sup>, and the scathing satires in which

<sup>5</sup> Schook’s *Encomium Fumi*, Dousa’s *E. umbrae*, Guther’s *E. caecitatis*, Schook’s *E. surditatis*, Menapius’ *E. febris quartanae*, Pirckheimer’s *Laus Podagrae*, the last an often repeated subject. A useful collection of nearly the whole of this curious literature is the *Nymwegen Pallas*, 1666.

Bebel 'praised' Venus and Erasmus eulogised Folly. It was a fashion easily adopted, and before the century was over the learned world was deluged with the sonorous praise not merely of negations or vacuities such as these, but of ridiculous or loathsome things, asses, owls, geese, vermin and dung. No modern literature has showed so keen and unaffected a relish for the comic qualities of the disgusting. Greek and Italian had found heroes for their burlesque epics in the denizens of the warm summer air; the typical German humourist selected them from an old mattress. It was reserved for Fischart in modern literature to 'create' the flea, in the extraordinary work which celebrates its 'eternal war with women.'

Both these current qualities of German satire, the love of irony, and the humorous relish for foul things, help to explain the course assumed by the special satire of Grobianism. Towards the end of the fifteenth century it struck a vein which in its precise form had never been worked before,—the *inverted precept*, a code of rules framed upon the principle of Hamlet's answer to his mother: 'What shall I do?'—'*Not this by no means that I bid you do.*' To the plain man, Ovid's 'art of galantry' had all the air of such a code, and Obsopoeus' 'art of drinking' suggested the same by its title, though the one was a perfectly serious exposition, and the other an equally serious exposure. The new Cato on the other hand was an ironical re-writing of the most famous of mediaeval prescriptions of etiquette, the Catonian couplets in which 'a master teaches his son'.<sup>1</sup>

<sup>1</sup> Hans Krug's ironical '*Wie der meister seinen sun lert*' is printed in Zarncke's *Cato*, p. 144 f. It deals chiefly with bad manners in church (Vv. 50—71) and in the tavern (72—143).

A few years later appeared the *Narrenschiff*, with its notable chapter on the *Grobe Narren*. The 'new Saint' was speedily installed among the standing figures of satire. Grobian became the Cato of inverted etiquette<sup>1</sup>. A slight and obvious improvement on this hint gathered round him the society in which the inverted etiquette was to be observed, made him, in short, the eponymous founder of a polity of gross livers.

This combination was first made in the little tract of *Grobianus' Tischzucht*,<sup>2</sup> seven pages called 'Grobianus' Tischzucht<sup>2</sup>. It consists of sixteen articles for the regulation of 'a new brotherhood,' or 'order of swine,' with Grobianus as 'abbot' at its head, and open to every sincere repudiator of good manners, virtue and honesty. The obedient Brother is required, for instance, to go out to dine where he is not bidden, after carefully inquiring where the best dinner is to be had; boldly to take the best seat at the table; to dip first into the dish and secure the best portion at all hazards; not to put down his last glass except under the three conditions, that his eyes run, that his breath is short, and his glass is empty<sup>3</sup>. When the meal is over he is to sleep an hour, then to rush out and riot in the streets. For the rest, it is concluded, the discipline of the Order may be learnt without teaching; but the timid novice may consult the Abbot, or his subordinates—Doctors Full-man, Wine-love, Spithardus, &c., who will teach him effectually 'how never to come to

<sup>1</sup> Sachs wrote a '*verkehrte Tischzucht Grobiani*,' which is quoted in full in Zarncke's *Narrenschiff*, Einl.

<sup>2</sup> *Grobianus' Tischzucht bin ich genant, Den Brüdern im Seworden wolbekant*. [Von W. S.] Wilkefüge, 1538. It is dated ominously at 1 A.M., on the Carneval night, 'so Dhoren und Gecken gemeiniglich yhr grösstes Regiment halten.'

<sup>3</sup> So Dedekind, *Grobianus*, Bk. II. ch. 3.

honour, but to lie all his days with the sow upon the dung-hill, to suffer shame, poverty and contempt, and miserably die,—and may God the Lord,' adds the writer, his serious purpose suddenly breaking through his ironical mask, 'punish such and more sins Here, and spare them There. Amen.'

. This *jeu d'esprit* is chiefly remarkable as a precursor of the more famous book of Dedekind. Its humour lies in the grave and legal precision with which, like the author of the famous *Quodlibets* of the previous generation, it tabulates indecencies and classifies improprieties. Its dry and formal irony nowhere expands into dramatic life, nowhere recalls, for instance, the vivid pictures of society in which Swift, the great master of this literary *genre*, sarcastically taught his contemporaries how *not* to speak<sup>1</sup>.

F. Dedekind:  
*Grobianus*,  
1549.

Far inferior in this respect to Swift was likewise, no doubt, the imposing structure which, eleven years after the *Tischzucht*, Frederick Dedekind reared on its foundation. Yet it was crowded with suggestive material, which at more than one point needs only to be released from the formal outlines imposed by the plan to become the literary equivalent of Hogarth or Jan Steen. It carries us through all the stages of the Grobian's day; his mid-day rising, his simple toilette;—the hands and face scrupulously unwashed, the hair uncut, 'for so they wore it in the golden age<sup>2</sup>.' And so we pass rapidly to the central institution of Grobianism,—the table, every phase and vicissitude of which is exhaustively reviewed. The very servant who waits has two chapters of instruction,

<sup>1</sup> Swift: *A Complete Collection of Genteel and ingenious conversation, according to the most polite mode and method, now used at Court and in the best companies of England.*

<sup>2</sup> Book I. ch. I.

in which he learns how to appear in rags, to catch flies when he should be handing dishes, to spill all he carries, and devour all he can get, and defy soap and water<sup>1</sup>. But it is the guests and their host on whom the keenest and most constant satire is focussed. When invited out, for instance, the true Grobian is to take every precaution against an unsatisfactory dinner. Before giving his consent, he demands a list of the dishes and a programme of the music, makes sure that the pies will be excellent and the ladies fair, and, when quite satisfied on these heads, says 'well, I will come.' When the day arrives, he takes a copy of the bill of fare with him; he is then able to check the dishes as they appear, to make his choice before they are uncovered, and above all to secure that none is kept back. If this should happen, he is still equal to the occasion, and, storming and fuming at the treachery of his host, commands that the defaulter be instantly fetched in<sup>2</sup>. 'We are in no mind to have our dinner docked of a dish; bring the pasties, bring the cakes! —Do ye serve your guests with crab-apples?' Whereat the host greatly abashed, is fain to go forth and bring out his whole store himself<sup>3</sup>. If a Grobian, however, he has his turn. It is for him to greet any less welcome guest at the outset with the assurance that any invitation which *he* had received was sent in a drunken fit and meant nothing<sup>4</sup>. 'If the guests are not complete when the hour for dinner strikes, he takes his seat nevertheless, orders in the dishes, and relegates late-comers to a trencher of dry bread by the stove, or better still, he has his gates bolted and barred, and if the guests have to

<sup>1</sup> Book I. capp. 3, 8.

<sup>2</sup> Bk. II. cap. 1.

<sup>3</sup> *ib.* Scheidt only.

<sup>4</sup> Bk. II. cap. 9.

go empty away it will not hurt his wine. Even if they are punctual, he is by no means to bid them welcome, but to talk loudly of his expensive dishes,—‘a splendid eel, but it cost me dear,’—and what stores of spice, saffron and sugar have been used and lavished on them, and how his wife has cooked them in her own incomparable way<sup>1</sup>.

C. Scheidt: Dedekind is one of the half-dozen figures in literature *Grobianus*, who have been outshone by their translators, and one of 155<sup>12</sup>. the two or three who have been unaffectedly grateful for it. Kaspar Scheidt, a scholar of high talent at Worms, hailed the Latin Grobianus with delight, and after producing a German version, teeming with new additions, mostly admirable, of his own, dedicated it to the young student in a letter of enthusiastic admiration, which might have disarmed a more captious vanity than Dedekind's. ‘For even as musicians, he writes, do oft times interpose a flourish of their own in the score set down for them, yet alway fall again into the measure, so have I touched nothing of your meaning and intention.’ A year later Dedekind published an enlarged second edition of his own book, in which, like Schiller in a parallel case, he adopted a large number of his translator's suggestions.

By far the most important of Scheidt's contributions is a prologue, which serves both as introduction and as setting to the mock-code. ‘Master Grobianus,’ a ‘cunning carver of spoons and bearer of blocks’ is, in other words, the master of a Grobian school. But the labour of

<sup>1</sup> Bk. II. cap. 9. I adopt here the more graphic version of Scheidt.

<sup>2</sup> *Grobianus, Von groben sitten und unhöflichen geberden*,... Worms. The capital edition with introduction, by G. Milchsack, among Niemayer's *Neudrucke* has been of great use.

teaching has told upon his advancing years; he has no heir; and as Grobians mostly pass betimes out of this Vale of Boors (*Grobenthal*), the art which he professes 'of unseemly, riotous and filthy behaviour' is in danger of being utterly lost. He appeals for aid to his patrons Bacchus and Ceres, and finally, on the advice of his 'tender and virtuous housewife Grobiana, chosen mistress of sluts and slatterns,' resolves to obviate that calamity by compiling a systematic treatise on it. Dede-kind's code naturally follows. Scheidt thus added two figures to literature, the one hinted, but only hinted before, the other wholly new. The 'Saint' Grobianus was a name, the 'abbot' was a shadow; but the 'school-master' (who alone of the three, speaks in person), is a living character, with his airs of tenderness for his 'grobe kindlin,' his ejaculations of Grobian piety, his apprehensions of premature dismissal by the 'slut Atropos,' his curtain lectures from the amiable housewife. To the author of the *Ship of Fools*, however, Scheidt owed more definite hints than this. Like Brandt he poses as a universal satirist; the world teems with Grobians as with Fools,—'*Grobianorum infinitus est numerus!*' He calls in his scattered recruits to the school, as Brandt in his famous *Clamor* had rallied them to the Ship; and, most characteristic touch of all, he reckons himself among them. Brandt in sober humility had professed to be only the chief of Fools<sup>1</sup>; Scheidt ironically assumes to be not only a Grobian but the 'meanest of the order,'—honoured with permission to serve as 'Porter and Bedell at the gate'<sup>2</sup>.

<sup>1</sup> *Narrenschiff*, Prologue *ad fin.*, and cap. III, 76.

<sup>2</sup> *Grobianus* &c., 'Beschluss,' where Brandt's precedent is referred to.

Such strokes betray Scheidt's evident wish to make the *Grobianus* a rival to the *Narrenschiff* in his own field of slovenry, which he significantly treats, not, like Brandt, as a subdivision of Folly, but as a coordinate genus<sup>1</sup>. And they were adopted, in substance, into the new and final revision of the poem which Dedekind published a year

Dedekind: later. The alteration of most importance however for the *Grobianus*, [et *Grobiana*] 1552. literary future of the book was a new chapter, suggested by Scheidt's picture of Grobiana, for the regulation of 'Sluts and slatterns.' The female Grobian<sup>2</sup> is however immodest as well as slovenly,—a trait of some moment for her future history;—she not only 'walks the streets with draggled stockings, munching fruit, not greeting acquaintance,' &c., but frequents theatres and taverns, blushes at nothing she hears there, and permits her drunken lover the extremest familiarities as he sits at her side. The rest of the prologue, on the other hand, survived, at most, in a vague suggestion of the 'school' of slovenry,—a suggestion however which, as we shall see, was not allowed to drop. With these, and hundreds of minor additions, the *Grobianus et Grobiana* took its place among the best-read books of that hybrid literature of refined grossness and learned buffoonery which amused the later sixteenth century. The first fifty years saw twenty editions of the original and fifteen of two different translations<sup>3</sup>; and the seventeenth century brought not only eleven more editions of these, but three new translations which went through five

<sup>1</sup> Cf. e.g. *Grobianus* II. 7, where the *Narr* and the *Grobian* are compared: 'Ein Narr macht zehen, ein Grobian macht zwanzig.'

<sup>2</sup> Book III. c. 8.

<sup>3</sup> Scheidt's and Valentin Helbach's. The latter, after Scheidt's death in 1567, was called in to translate the revised *Grobianus et Grobiana*.

more<sup>1</sup>. Abroad too its reputation extended. To France Grobianus, like the Kalenberger and Ulenspiegel, contributed a new word<sup>2</sup>. To England it brought, in addition, a new method, and to some extent a new subject, of social satire.

## I.

The satire of bad manners was still an essentially, GROBI-  
 and the satire by ironical precept a wholly, unworked ANUS IN  
 vein when in 1605, the English version of Dedekind ENGLAND.  
 gave an example of both<sup>3</sup>. The irony of a religious order *The Gul's*  
 of fools or rogues was faded and familiar; but there was *Horn-*  
 still piquancy in the device of a text-book of etiquette for *booke.*  
 their peculiar use. Brandt's 'Saint Grobian' had indeed  
 already appeared in Barclay, who represents him, in even  
 fuller detail, as the new 'Saint' to whose 'vile temple  
 renneth yonge and olde, men, women, mayden, and with  
 them many a childe, worshipping his festis with theyr  
 langage defylde'; but the idea was not in the manner of  
 English satire, and had remained barren. Awdeley, the  
 first English satirist to deal with manners rather than  
 morals, came near the Grobian type in one or two of his  
 'knaves,' such as 'Unthrift' the careless and 'Green

<sup>1</sup> For the detailed bibliography see Milchsack's edition of Scheidt.

<sup>2</sup> *Grobianisme* occurs, for instance, in Cotgrave (1611),—rendered by 'grobianism, slovenliness, unmannerly parts or beastliness.'

<sup>3</sup> *The Schoole of Slovenrie: Cato turned wrong side outward...* By R. S. Gent. Milchsack (Grobianus p. xxxii) quotes this title with no less than four errors, and transforms the author, 'R. S., Gent.' into 'R. J. Sent.' 'Sents Uebersetzung' of Dedekind may be classified with the works of 'Dr Ebenda.'

Winchard' the slovenly ; but of 'Grobianism' either as a word or as a single specific vice he knows nothing. And it cannot be said that fifty years later, what Dedekind meant by Grobianism was a more obvious and natural subject for English satire. The combination of brutal manners and slovenly habits was scarcely normal in the England of James I. *Grobianorum infinitus est numerus* would hardly have summed up the daily observation of a Jonson and a Decker. Whatever might be the case among the poorer classes,—whom it would have been as pointless to ridicule for their bad clothes or rough ways as for their poverty,—the middle and upper classes were not generally liable to the charge which they themselves habitually brought against the countrymen of Dedekind. It was only in sections and fragments that English society adopted Grobianus ; and then not so much from any stubborn remnant of unsubdued barbarism as from some whim of fashion or of philosophy, an affectation of courtly *hauteur*, an enthusiasm for Arcadian simplicity. The Grobian with overbearing manners is of irreproachable dress ; the ill-dressed Grobian is some 'mere scholar' who despises forms, but who is neither a glutton nor a ribald ; the Grobian who offends in all these ways belongs to some brotherhood of *dilettanti* misanthropes sworn to pursue unalloyed nature by eliminating civilisation. The fop, the rusty scholar, the misanthrope, were the most available equivalents, in terms not of English language but of English society, for the exotic and unfamiliar creation of Dedekind ; and they were in fact substituted, more or less explicitly, for it in the two remarkable English satires which I proceed to notice.

Decker :

*Horn-*  
*booke*, 1609.

Decker's *Gul's Horn-booke*, the best known and most vivid satire of the popular school which immediately preceded the Theophrastians, was the result of a com-

promise which would be glaringly obvious even if the author had not candidly pointed it out. The book was begun, he tells us, long before upon the lines of Dede-kind. 'This tree of guls was planted long since; but not taking root, could never bear till now.... It hath a relish of Grobianism, and tastes very strongly of it in the beginning; the reason thereof is, that having translated many books of that into English verse, and not greatly liking the subject, I altered the shape, and of a Dutchman fashioned a mere Englishman.' And this English version of the 'Dutch' Grobian is, purely and simply, what Earle would have called the 'mere common' Fop, the empty and frivolous 'Town-gul' with whom the Grobian shares a certain cynical egoism of manner, without in the least sharing the subtle, half instinctive deference to fashion by which it is at once sustained and balanced. Between the two characters the whole book fluctuates, awkwardly enough. The opening chapter, as Decker says, 'tastes very strongly' of the Grobian. The 'saints' whom he appeals to for aid are those of mere grossness and brutality;—'Sylvanus—father of ancient customs...and most beastly horse-tricks,' 'Comus, the clerk of gluttony's kitchen,' and 'homely but harmless Rusticity,' 'midwife of unmannerliness'.<sup>1</sup> The old world is ironically contrasted with the new, the plain and homely ways of the Saturnian age, when all men were Grobians, with the luxurious refinement of London. In the second, and third chapters the Grobian is still prominent; the 'young gallant' is advised, as in Dedekind, to sleep late, to wear his hair long, and to dress on cold mornings before the hall-fire *sans gêne*. In the fourth, however, the portrait begins decisively to change character, and a new subject emerges, of totally unlike habits

<sup>1</sup> *Proœmium*.

and ideas, no regretter of the primitive age 'when all men were 'Grobians,' but the most fanatical devotee of the latest fashion. 'He that would strive to fashion his legs to his silk stockings, and his proud gait to his broad garters, let him whiff down these observations, for if he once get to walk by the book—Paul's may be proud of him.' The fashionable promenade is the subject of a series of regulations. Decker warns his gallant at what hour to walk in the middle aisle, 'wherein the pictures of all the true fashionate and complemental gulls are,' frequently to 'make his tailor attend him there to note the new suits,' ...and to 'greet none unless his hat-band be of newer fashion than yours, and three degrees quainter'; to stay there not above four turns; then to pass to the book-seller's, 'where if you cannot read you can smoke, and inquire who has writ against the divine weed;' to appear again after dinner, but (unlike the true Grobian) in a changed suit, 'then to correct your teeth with some quill or silver instrument,—it skills not whether you have dined or no,'—another trait impossible to the complete candour of Grobianism. In the fifth chapter ('At the ordinary') and the sixth ('At the play'), the common link between the two characters at length comes clearly into view. After riding to the dearest ordinary at the most fashionable hour (11.30), he is above all 'to eat impudently, for that is most gentlemanlike; when your knight is upon his stewed mutton, be you presently, though you be but a captain, in the bosom of your goose,' &c. Then at the play, follows the familiar picture, so often drawn, of the loungers on the stage, ostentatiously late in arriving, laughing at the most pathetic moment of a tragedy, trifling over their tobacco, jesting with their neighbours; no doubt the best illustration of Grobianism which the society of Jacobean London afforded.

Wholly different was the Grobianism of Jacobean Oxford, as it appears, caricatured by a contemporary Oxford hand, in the MS. drama of *Grobiana's Nuptials*.

## II.

This piece, hitherto known chiefly from a brief and contemptuous notice in Dr Nott's edition of the *Gul's Hornbooke*, is nothing more than a one-act interlude. Its plot is of the slightest. 'Old Grobian' is the head of an Oxford<sup>1</sup> club of slovens, rusty pedants, and Mohocks, sworn enemies of good manners, from among whom he desires to choose a husband for his daughter, Grobiana. His Prologue gives a graphic description of the composition of the club:—

'I am he that hate manners worse than Timon hated men; and what did he hate them for? marry for their foolish, apish, compliments, niceties, lispings, cringes....I'll tell you, fellow Grobians, what our sport is to-night; you shall see the true shapes of men, not in the visor and shadow of garbs and postures, but very pure pate men, such as nature made 'em, such as ne'er swath'd their feet in stocks, for fear of the grain of their own bodies, whose beards and hair never impoverish'd the wearers, that banish wisely a barber as a superfluous member for the commonwealth....Here's true and honest friendship, no slight god speeds, but a how do you, so well set on you shall remember the salute a week after. We doff our heads sooner than our hats, and a nod includes all ceremony. Our scholars are right too, such as if you did but see them, you would swear they did look to nothing but their books, very plodalls of Art, not a leaf turn'd o'er but ye have his hand he hath read it. Libertines you may judge them by the

<sup>1</sup> This inference, suggested by the locality of the MS, confirmed both by the sketch of 'our Scholars,' quoted below, and by the evidently local allusion to the game of 'Banbury cockles' in the 'rules' (Sc. 3).

clothes, and Nazarites by the hair: the gown is like a dun at your backs which they would shake off. Then for the matter, no grand sallets and kickshaws of learning, but the very bruise of divinity.... These are the men old Grobian loves; out of these pickt models of humanity shall I seek out a son-in-law.<sup>1</sup>

The occasion is naturally chosen with reference to the true centre of the Grobian cult—the table. The society is met, ‘according to our annual custom,’ to dine. Three typical members,—Pamphages, the glutton by profession, Vanscop, the representative of the ‘Dutch’ founders of the order, and Tantoblin, a passed master in the entire range of Grobian accomplishments,—take the leading part, appropriately enough, in a plot of which the incidents are the changing phases of an entertainment, the tragic suspense that of deferred dinner. Successive scenes introduce us to the before-dinner conversation, in which Pamphages thus records his experiences by the way:

‘I saw a gentleman, handsomely in my conceit, tying up his torn stockings with a blue point.

*Vans.* Did you invite him to dinner?

*Pamph.* He told me he would not fail.

*Tant.* He shall be welcome.’

to the rules of the society:

‘Here Pamphage, read the orders concerning the games that shall be used among the grobian.

*Pamph.* It is edicted that every grobian shall play at Bambery hot cockles at the four festivals,...

*Tant.* Indeed a very useful sport but lately much neglected to the mollifying of the flesh.

<sup>1</sup> The spelling in this and the following extracts is modernised. They were made some years since, and though I should now prefer to print them exactly as they stand, I have had no more recent opportunity of consulting the MS.

*Pamph.* Every apprentice is tied to leave his business whatsoever to go to foot-ball (if any be in the street), or if they hear the bag-pipes,...

and, finally, to the dinner itself, with its gross fare and grosser manners. 'Hands were made before knives' is the significant apophthegm of a devotee of the more venerable method. Grobiana here plays a part little inferior to that of her namesake in Dedekind, the frequenter of masculine drinking-parties<sup>1</sup>. She shares the men's manners as well as their company, and is worthily adjudged at the close to the accomplished Tantoblin.

A piece of work so slight as the *Grobiana's Nuptials* would hardly deserve notice if it were not one of the most curious productions of international satire, and also one of the most direct of the series of literary links which connect Wittenberg and Oxford. If Greene borrowed any traits from the university of Faustus, it was only to colour the purely English and Oxford story of Bacon; but the Wittenberg satire of slovenry has supplied the whole conception of the Oxford satire; *Grobiana's Nuptials* is entirely due to the *Grobianus*.

*Grobiana's Nuptials* is nevertheless as distinctly of Oxford as *Grobianus* is of Wittenberg, and as distinctly of the seventeenth century as this of the sixteenth. Its rough unpolished prose may show little literary advance upon Dedekind's fluent elegiacs; but it reflects a far more advanced society, a more pregnant and stirring intellectual atmosphere. It is no accident that Old Grobian is made at the very outset to associate his creed with the philosophical misanthropy of Timon, while the earlier Grobian was a mere clown, who defied social

<sup>1</sup> *Grob. et Grobiana* III. 8, 8 f.:

Nec tibi displiceant hilares convivia coetus  
Quae celebrant iuvenes quae celebrantque viri, &c.

amenities simply because he found them inconvenient, to the newer variety it is an affectation, an eccentric or fashionable humour. If he is unpleasant he can give reasons for it. He dwells on the sincerity of bad manners as well as on their practical utility. Grobianus, the legislator for the slovens, is a shrewd egoist, who can doubtless defend his unpleasantness, but who only affects to defend it by its ultimate utility to himself. Old Grobian belongs to a more polished and plausible school. He can give slovenry an air of morality as well as of prudence. He lays more stress on the insincerity of bad manners than on their impolicy. His bluntness is a weapon against flatterers, his egoism a protest against hollow obsequiousness. If he is uncivil it is because, like Timon and Rousseau, he abhors civilisation ; if he will not affect the 'foolish, apish compliments, niceties, lispings, cringes' of mankind, it is in order to present society stripped of its mask,—'the true shapes of men, not in the visor and shaddow of garbes and postures, but verie pure pate men, such as nature made 'em'; 'true and honest friendship' divested of affectation and ceremony; scholarship recalled from pretentious trifling to concern itself with the weightiest of all matters. The old-style Grobian let his hair grow out of laziness or at most out of regard to the fashion of the golden age ; the new is a social theorist and regards the barber as 'a superfluous member of the commonwealth.' The old had an unaffected disdain for literature, the new might be a bookish man whom absorbing study had first beguiled into Grobianism, and then supplied with arguments in its defence ; the old was a savage in civilised life, the new had read Montaigne's essay on Cannibals, and defied conventions in the honourable disguise of a worshipper of nature.

Such satire could hardly have attached itself to that of Grobianism in the Germany of Dedekind. It could hardly have arisen except in a society artificial enough to affect simplicity. Dedekind addressed himself to a society too intolerably natural to even affect refinement. The day of Pastorals and Arcadias was still two generations away. In England, on the contrary, the sentimental regret for lost simplicity which is at the root of all Arcadian poetry, was already vigorous thirty years after Dedekind; and having, as usual, powerful patrons, it became also a fashion, and left its mark in the literature of convention, as well as, here and there, in the cardinal creations of the age. The language of such regret, become an intellectual common-place of English society, was caught up and somewhat happily applied by the author of *Grobiana's Nuptials*; and the contrast which Dedekind found in the German society of his day between the 'respectable' burgher and the wilfully offensive boor, was qualified by the finer contrast of which English society afforded suggestions, between the devotees of social convention and of the 'simplicity of nature.'

Here for the present the literature of Grobianism closes. In the next century, however, Dedekind was a still unforgotten name. His book, or the German versions of it, had gone through an unbroken series of editions in Germany up to 1708. His ironical method suited the taste of the contemporaries of Pope and Swift. The author of the '*Genteel and ingenious Conversation*' can hardly have been unacquainted with the classic of inverted etiquette; and to him, as one 'who first Introduced into these kingdoms...an *Ironical Manner* of

Writing' was dedicated, some ten years after the appearance of the *Dunciad*, a new translation of the *Grobianus*<sup>1</sup>. Thus the most artificial in manner, the most prosaic in subject, of the German satires of the 16th century, was the last to be forgotten in an age peculiarly disposed to appreciate these forms of literary distinction.

But its time was at length come. Some forty years after the translation of *Grobianus*, polite England was weeping over the translated *Werther*. The typical German figure of the later eighteenth century follows hard upon the last traces of the typical figure of the sixteenth; the master of callous brutality and phlegmatic ill-breeding leaves the stage as the classical victim of sentimental passion enters it. With *Grobianus*, the old epoch of literary intercourse with Germany—which the present volume is an attempt to describe—draws to its lingering close; *Werther* is the vehement opening of a new and profoundly different one, in which the two countries assume in a measure inverted parts, and Germany, at length emancipated from the old alternatives of satiric humour and drastic prose, becomes for England, slowly groping towards the renewal of her old imaginative glories, the herald of the poetic Romanticism of the nineteenth century.

<sup>1</sup> *Grobianus, or the Compleat Booby. An Ironical Poem...* Done into English by Roger Bull, Esq. London, 1739.

## APPENDIX I.

### THE DATE OF COVERDALE'S HYMNS.

IT seemed best to reserve for an Appendix the question of the date of Coverdale's books. The only existing copy has no indication of either place or date; and the earliest definite notice of it occurs in the 1546 list of prohibited books<sup>1</sup>. It was evidently written at a time when Coverdale had access to a considerable amount of German hymnal literature; and we may assume therefore that it belongs to one of his two earlier exiles in Germany,—viz. that from 1529—1535, when he was at work upon his translation of the Bible, probably at Zurich<sup>2</sup>; or the later and better known years 1540—48, when he lived as pastor of the church at Bergzabern.

Dr Mitchell, who has discussed this question apropos of the similar work of his countryman, John Wedderburn, which was certainly produced between 1540 and 1546, decides for the later, and even urges that Wedderburn's book preceded Coverdale's, and that four hymns, almost identical in the two, were adapted from his by Coverdale.

For the earlier period is the fact already stated that the whole of his originals were published by 1531. The latest hymn that, in my opinion, he can be shown to have used, is Johann Agricola's 'Ich ruff zu dir' (*Geistliche Lieder*, Er-

<sup>1</sup> In the first edition of Foxe it was inserted in the previous list of 1539; but all subsequent editions struck it out, and Townsend testifies its absence in Bonner's Registers.

<sup>2</sup> On this period cf. Dr Ginsburg in Kitto's *Dict. of the Bible*, art. 'Coverdale.'

furt, 1531). The production of the years which followed, only less vigorous than that of the previous years, is wholly neglected. Luther himself, it is true, wrote little after 1530, but among his later hymns are two of such importance as the 'Vom himel hoch da kom ich her' (1535), and his version of the Lord's Prayer ('das deutsche Patrem') 1539. As Coverdale has omitted several of Luther's hymns which must have been known to him, nothing can be inferred from his omission of the child's Christmas hymn; but it is unlikely that if a Lutheran version of so important a part of the ritual as the Lord's Prayer had lain before him, he would have used inferior versions by obscure writers, like Moibanus and the anonymous poet of Erfurt, when he has carefully adopted Luther's rendering of the Creed and both his renderings of the Ten Commandments<sup>1</sup>. It is also remarkable that Coverdale's correspondence during the years 1540—8 with the hymn writer Conrad Huber, who later edited the Strassburg Gesangbuch of 1560, should contain no allusion to the hymns, on which Coverdale must, on the second theory, at that very time have been engaged.

The same conclusion is suggested by a comparison with him of his Scottish rival in this field, Wedderburn. John Wedderburn, Coverdale's junior by some twenty years, probably fled from Scotland in 1540, when Coverdale was already old in exile and hardened in persecution. His 'Compendius buik of godly and spiritual sangis'<sup>2</sup> is certainly superior in every way to his English rival's; it is equally certain that it reflects a later epoch of German Hymnology. Luther is represented by his later as well as his earlier work<sup>3</sup>, and while he is still the most important contributor, his predominance is much less decided than is Coverdale's.

<sup>1</sup> The 'Deutsche Patrem' was subsequently translated, according to Prof. Mitchell, by Coxe.

<sup>2</sup> This was accessible to me only in the edition of 1600 (Edinburgh).

<sup>3</sup> His *Pater noster* of 1539 is the basis of the third, his 'Vom himel kom ich her' of the twelfth, of Wedderburn's hymns.

The old associates of 1525—30 are reinforced by new writers of 1535—40,—Hermann Bonn, Nicolaus Boie, Georg Gruenewald, Heinrich Witzstadt<sup>1</sup>.

Finally, there is the evidence of the four pieces which, as noticed by Prof. Mitchell, are 'almost identical' in the English and the Scottish poet<sup>2</sup>. Prof. Mitchell decides that they belong to his own countryman, on the ground that he was, as everyone admits, the better poet, and that the common versions are, as he thinks, superior to the usual level of Coverdale. There is here no external evidence whatever; and, with so narrow a field for comparison, internal evidence is almost necessarily inconclusive. The divergences in phrase and even in metre of the two versions are tolerably numerous,—more so than Dr Mitchell's language would suggest; but they offer little ground for deciding whether it was the capable Wedderburn who deliberately improved upon the plodding Coverdale, or the plodding Coverdale who perversely deviated from the capable Wedderburn. On the other hand, their coincidences offer one or two slight points of vantage. Wedderburn's rapid style has caught up, I think, certain Coverdalisms and Anglicisms, of which Coverdale's version would be the natural source. It would be hard to discover in his undisputed work so genuine an example of the Coverdalian 'tag' as occurs in his version of the Magnificat:

For he has seen the low degree  
Of mee his hand-maiden *trewlie*—

<sup>1</sup> I take these identifications from Prof. Mitchell's book, but have verified them in each case with Wackernagel: N. Boie's '*O Gott wir danken deiner güt*' (Magdeb. 1541, not 1543 as M. says); H. Bonn's '*O wir armen Sünder*' (Magdeb. 1542, not 1543 as M. says); the '*Nun hörend zu ir Christen leut*' of Heinrich Witzstadt (in Magdeb. book of 1541 according to M.); Gruenewald '*Komt her zu mir*' in '*der ganze Psalter*' 1537.

<sup>2</sup> These are: (1) The version of the *Magnificat*; (2) Agricola's '*Ich ruff zu dir*'; (3) Creuziger's '*Herr Christ der eynig Gotteszohn*'; (4) Psalms, '*Deus misereatur nostri*.'

where Coverdale's rendering verbally corresponds<sup>1</sup>. And, lastly, we have an instance of the most trustworthy of all kinds of evidence in cases of disputed priority, that of rhymes. The following stanza of the northern poet's *Magnificat*.

And helped his servants ane and all  
Even Israel hee has *promesit*,  
And to our fathers perpetuall  
Abraham and his *seid*—

is easily explained if he had before him Coverdale's version, in a Southern dialect, in which *sede* can rhyme unimpeachably with *promysed*.

<sup>1</sup> For similar otiose uses of 'truly' in Coverdale, cf. e.g. his first *Creed* (twice), and second *Creed* (thrice). It is of course, a lineal descendant of the *trewlie* and *verrament* of the rhymed romances.

## APPENDIX II.

### CHILIANUS' DOROTHEA IN DENMARK.

THE sacred drama of Chilianus Millerstadius on the *Dorothea* story, which occupies a somewhat obscure place among the beginnings of the modern Latin drama (cf. p. 79 f.), remained, with one exception, wholly unnoticed abroad. It is however associated with the first germs of dramatic art in Denmark, where it was translated by Chr. Hansen the first Dane of whom anything in the shape of drama survives. The translation exists in MS. only, and the work to which I owe my knowledge of it is so little accessible to English readers that a brief extract and paraphrase may not be unwelcome here. I quote from Nyerup's *Bidrag til den danske Digtekunsts Historie* I. p. 147 ff., part of the critical scene in which Dorothea is brought before Fabricius. 'I will make thee my wife,' says the prefect; 'a great honour for thee!' 'I am plighted to a gentle Bridegroom,' she replies, 'whose glory is over earth and heaven, and I have promised him to be true while I live. I take no other husband, I tell thee on my faith.'—'In that, 'tis clear, thou followest the Christians.'—Dorothea reproaches him with his unbelief in Christ who died for him.—'He was a liar,' retorts Fabricius, 'as any to be found in Judæa.' Dorothea breaks into indignant protest. She is threatened with torture. 'My body ye may torment, but my soul ye cannot harm':

*Fab.* Jeg vil dig have til min Husfru kjære  
det skal dig blive til mögil [megen] Ære.

*Dor.* Jeg haver lovet en Brudgom fin,  
Som over Verden og Himmelen skin',

- Og lovet hannem Kydskhed at bære,  
 imedens jeg i Verden mon være.  
 Jeg lover mig aldrig anden Mand.  
 Det siger jeg dig paa min sandt.
- Fab.* I det du følger christne Klerke,  
 dermed lader du dig meget mærke.
- Dor.* Hvi forsmaar du Jesum Christ,  
 Gud og Menneske alt for vist.  
 Han taalde og Pine for dig og mig  
 paa Korsets Træ, det siger jeg dig.
- Fab.* Det var en Lögner og utro Mand  
 Som han kunde findes i Jödeland.  
 .....
- Dor.* Skamme dig din fule Hund,  
 at tale telige [deslige] med din Mund.
- Orest.* O du Skjöge, ti nu quær,  
 för ikke for Herren slig Blær [Larmen].  
 Vilt du ikke vore Guder ære,  
 vi ville dig med Kjeppe og Ris lære.
- Dor.* Mit Legem kunne I pine og brænde,  
 min Sjæl kunne I dog intet skjænde.  
 &c.

It will be seen that style and metre were equally in an elementary condition in Denmark when Hansen applied them to render his not very powerful or stimulating original.

## APPENDIX III.

### THE ENGLISH PROSE VERSIONS OF FORTUNATUS<sup>1</sup>.

THE first known versions of the romance of Fortunatus in English fall in the latter half of the seventeenth century. The earliest of known date was printed in London in 1676; and a second, identical, edition of it appeared in 1683. Another version, without date, is placed by the British Museum Catalogue conjecturally in 1650. Both versions, though differing considerably, are ultimately derived from the Frankfurt edition of 1550. The earlier or Augsburg editions, with their ungermanised names and their slightly more copious incident, have had no influence. Nor, on the other hand, has the more recent translation in Dutch. The *Fortunatus* was translated at a time when Dutch was no longer the usual intermediary between English and German. The Dutch version diverges from the Frankfurt editions on which it was ultimately based, (1) in omitting numerous comments on unessential incidents usually at the ends of chapters, (2) in several new woodcuts, (3) in altering various proper names. Thus, the Dutch omits sentences at the ends of chapters II, IV, V, XIV, where the English (1676), like the German, version retains them. Or the Dutch version is simply less verbose, the English as before agreeing

<sup>1</sup> Mr Halliwell has briefly discussed these in his *Descriptive notices of English popular Histories*, Percy Society, Vol. 29, but apparently with no knowledge of the originals.

with the German. Thus the description of Fortunatus' early success is given thus in the three versions :—

‘Nun, wie viel der Fürsten und Herren edler knecht oder sonst diener, mit ihn auff der Hochzeit gebracht hetten, so was doch keiner under ihn, des dienst und wesen gemeinlich Frauen und Mannen basz gefiel den F.’

‘Onder hem allen was niemans dienst en manieren den Vrouwen en Mannen aangenamer dan F.’

‘Although there were assembled at the wedding no small number of proper and comely servitors attending on the chief estates ; yet there was none of them all, whose service and behaviour was more commended than the service of F.’

The English woodcuts, though fewer and poorer than the German, most frequently agree with them and differ from the Dutch. Cf. e.g. cuts of Lady Fortune giving Fortunatus the purse (p. 43 of English version) and that of Fortunatus' escape with the Hat (p. 108). Lastly, the following divergences in proper names appear decisive. The town to which Fortunatus seeks to escape is called in the German (1650) *Lauffen*, in the Dutch, *Löwen*. Only the former can have produced the English *Lausan*. The town at which he arrives on his way to the Purgatory is called *Waldrick*, *Maldric*, *Waldrink* respectively ; the town at the Purgatory *Wernicks*, *Vernies* and *Vernecks*. The Dutch names are here from the French version which has *Maldric* and *Vernieu* for these two towns.

Of the two English versions that of 1676 is a tolerably faithful rendering, with a strong religious bias ; that of 1650 (?) a free and conventional paraphrase by a man of letters and of the world. The former qualifies the bold mythology of the story in the interest of Christian piety, (substituting e.g. God for Fortune as the ruler of the universe) ; the latter freely curtails it in the interest of enlightened common sense. ‘I found much childish and superfluous inventions, he says in the preface, intermingled also with some sparks of profane superstition (according to the manner of penning used in that barbarous age) ;... I thought it most convenient, by

rejecting what was unseemly, rather to collect an abstract of the substance thereof in a plain and English phrase, than to have respect to the literal translation.'

A short specimen, from the opening of the chapter in which Fortunatus receives the purse, will illustrate their difference of manner. Here is the 1676 version :—

'As soon as he awaked, he saw standing before him a Fair and Beautiful Woman, muffled over her eyes. Wherefore he praised and thanked God devoutly, that yet he beheld some man-kind before his Death. And to the woman he said, I beseech thee sweet Virgin for the love of God to assist me, that I may come out of the wood, for this is the third day that I have here irksomely wandered without any meat, and herewith declared to her also what had chanced concerning the Bear. Then demanded she of him saying, Of what country art thou, and what moved thee to come hither? He answered I am of the Isle of Cyprus, and poverty hath constrained me to wander, I force not greatly whither, until such time as God (when it pleaseth him) shall provide for me a competent living.'

And this is the version of 1650 (?):—

'Fortunatus, being got out of the city of Orleance took his way towards Paris, when travelling through a huge forest, he on his right hand perceived a beautiful creature in female Habit, sitting under a broad-spreading Beech-tree with a Vail over her Eyes, who as he came near, arose and crossed him in his way, at which he rejoiced not a little, for he had thought there had been nought but Bears and wild Beasts in that place, but looking steadfastly upon her he began to ponder whether she might not be a Fairy or bodily shape composed by delusion. But whilst he was in this doubt, she taking him by the hand, gently asked him whither he was going, upon which he told her, desiring she would accompany him out of the wood.'
